First International Workshop on Security and Privacy in Cloud-based Applications (AU2EU 2015)

Welcome Message from Workshop Organizers

Cloud-based services started gaining momentum with the growing need to have data accessible at any time and synchronized across multiple devices. However, providing suitable solutions to ensure the security and privacy of cloud based applications has always been one of the most challenging issues that researchers tried to tackle.

AU2EU is an FP7 project which focuses on implementing an integrated privacy-preserving eAuthentication and eAuthorization framework that enables trusted collaborations and delivery of services across different organizational/governmental jurisdictions and demonstrating the framework in a real-life environment. Consequently, the project aims at fostering the adoption of security and privacy-by-design technologies. The results of the project, which summarizes the joint work of twelve partners from Europe and Australia will be presented in the workshop.

The workshop consists of two sessions. The first session is dedicated to presenting the work that has been conducted as part of the AU2EU project. The second session brings together different results on the related topics of security and privacy in cloud-based applications.

The Workshop organizing committee

Milan Petkovic, Philips Research / Eindhoven University of Technology, Netherlands
Jan Camenisch, IBM Research, Zurich, Switzerland
John Zic, CSIRO, Sydney, Australia
Alexandru Egner, Eindhoven University of Technology, Netherlands
