Message from the General Chairs

Through the years, the scope of the research presented at the conferences has evolved to encompass new trends and results in various areas of application specific computing systems. This conference serves as a forum for researchers from universities as well as industry who are interested in the fundamental aspects of these topics.

Special thanks are extended to Professor Lothar Thiele, from ETH Zurich, Switzerland, for his keynote address titled “Array Processing in Embedded Systems.”

We are indebted to Jose A.B. Fortes, S.Y. Kung, and Earl E. Swartzlander, the Steering Committee members of the conference, for their guidance and their confidence. We also extend our sincere thanks to the program chairs, Patrice Quinton from IRISA at University of Rennes, France, and Yves Robert, from INP, FNS at Lyon, France, who developed the program in an extremely thorough and professional manner.

Peter Cappello, Catherine Mongenet, Guy-René Perrin
