Panel

Automated Software Engineering — Issues and Opportunities

This panel is chartered with discussing just what ASE researchers should be focusing their energies on over the next five years. In particular, what are the most important software engineering problems right now? And what, in their view, are the most worthwhile or interesting approaches to addressing them?

The panel’s invited participants are members of government agencies and industrial labs that fund software engineering research. They will addresses these questions from the point of view of where they plan on directing research funding over the next three to five years.
