Table of Contents

Keynote

- Swarm Verification, Gerard J. Holzmann, NASA, USA
- Reflections on, and predictions for, support systems for the development of programs, Cliff B. Jones, School of Computing Science, Newcastle University, UK

Testing 1

- Increasing Test Granularity by Aggregating Unit Tests, Matthew Jorde, University of Nebraska, USA; Sebastian Elbaum, University of Nebraska, USA; and Matthew Dwyer, University of Nebraska, USA
- Random Test Run Length and Effectiveness, James Andrews, University of Western Ontario, Canada; Alex Groce, Jet Propulsion Laboratory, USA; Melissa Weston, University of Western Ontario, Canada; and Ru-Gang Xu, UC Los Angeles, USA
- Program Analysis with Dynamic Change of Precision, Dirk Beyer, Simon Fraser University, Canada; Thomas A. Henzinger, EPFL, Switzerland; and Gregory Theoduloz, EPFL, Switzerland

Traceability

- IR-based Traceability Recovery Processes: an Empirical Comparison of "One-Shot" and Incremental Processes, Andrea De Lucia, University of Salerno, Italy; Rocco Oliveto, University of Salerno, Italy; and Genoveffa Tortora, University of Salerno, Italy
- Enabling Automated Traceability Maintenance by Recognizing Development Activities Applied to Models, Patrick Mäder, Ilmenau Technical University,
Germany; Orlena Gotel, Pace University, New York, USA; and Ilka Philippow, Ilmenau Technical University, Germany

- Incremental Latent Semantic Indexing for Effective, Automatic Traceability Link Evolution Management, Hsin-yi Jiang, Iowa State University, USA; Tien Nguyen, Iowa State University, USA; Ing-Xiang Chen, Yuan Ze University, Taiwan; Hojun Jaygarl, Iowa State University, USA; and Carl Chang, Iowa State University, USA

**Verification**

- Automated Verification of Multi-Agent Programs, Rafael H. Bordini, Durham University, UK; Louise A. Dennis, University of Liverpool, UK; Berndt Farwer, Durham University, UK; and Michael Fisher, University of Liverpool, UK
- Validating Real Time Specifications using Real Time Event Queue Modeling, Robert Hall, AT&T Labs Research, USA
- Automatic Inference of Frame Axioms Using Static Analysis, Zvonimir Rakamaric, University of British Columbia, Canada; and Alan Hu, University of British Columbia, Canada

**Modelling 1**

- Generating and Evaluating Choices for Fixing Inconsistencies in UML Models, Alexander Egyed, Johannes Kepler University, Austria; Emmanuel Letier, University College London, United Kingdom; and Anthony Finkelstein, University College London, United Kingdom
- Mining Scenario-Based Triggers and Effects, David Lo, Singapore Management University, Singapore; and Shahar Maoz, The Weizmann Institute of Science, Israel
- Refining Real-Time System Specifications through Bounded Model- and Satisfiability-Checking, Matteo Pradella, CNR IEIIT, Italy; Angelo Morzenti, Politecnico di Milano, Italy; and Pierluigi San Pietro, Politecnico di Milano, Italy
Debugging

- Evaluating Models for Model-Based Debugging, Wolfgang Mayer, University of South Australia, Australia; and Markus Stumptner, University of South Australia, Australia
- Error Reporting Logic, Ciera Jaspan, Carnegie Mellon University, USA; Trisha Quan, Carnegie Mellon University, USA; and Jonathan Aldrich, Carnegie Mellon University, USA
- Efficient Monitoring of Parametric Context-Free Patterns, Patrick Meredith, University of Illinois Urbana-Champaign, United States; Feng Chen, University of Illinois Urbana-Champaign, United States; Dongyun Jin, University of Illinois Urbana-Champaign, United States; and Grigore Rosu, University of Illinois Urbana-Champaign, United States

Component-based Systems

- A Framework for Dynamic Service Discovery, Andrea Zisman, City University, UK; George Spanoudakis, City University, UK; and James Dooley, City University, UK
- A Methodology and Framework for Creating Domain-Specific Development Infrastructures, George Edwards, University of Southern California, USA; and Nenad Medvidovic, University of Southern California, USA
- Connecting Programming Environments to Support Ad-Hoc Collaboration, Rajesh Hegde, Microsoft Research, Redmond, USA; and Prasun Dewan, University of North Carolina, Chapel Hill, USA

Experience Reports

- Reducing False Positives by Combining Abstract Interpretation and Bounded Model Checking, Hendrik Post, University of Karlsruhe, Germany; Carsten Sinz, University of Karlsruhe, Germany; Alexander Kaiser, University of Tuebingen, Germany; and Thomas Gorges, Robert Bosch GmbH Chassis Systems Control, Germany
• Unit Testing of Flash Memory Device Driver through a SAT-based Model Checker, Moonzoo Kim, KAIST, South Korea; Yunho Kim, KAIST, South Korea; and Hotae Kim, Samsung Electronics, South Korea
• Effort Estimation in Automating the Capture of Architectural Knowledge, Rafael Capilla, Universidad Rey Juan Carlos, Spain; Francisco Nava, Universidad Rey Juan Carlos, Spain; and Carlos Carrillo, Universidad Politecnica de Madrid, Spain

Testing 2

• Test-suite Augmentation for Evolving Software, Raul Santelices, Georgia Institute of Technology, USA; Pavan Kumar Chittimalli, TCS Ltd, India; Taweesup Apiwattanapong, NECTEC, Thailand; Alessandro Orso, Georgia Institute of Technology, USA; and Mary Jean Harrold, Georgia Institute of Technology, USA
• Reducing the Cost of Path Property Monitoring Through Sampling, Matthew Dwyer, University of Nebraska - Lincoln, USA; Madeline Diep, University of Nebraska - Lincoln, USA; and Sebastian Elbaum, University of Nebraska - Lincoln, USA
• Query-aware Test Generation Using a Relational Constraint Solver, Shadi Abdul Khalek, University of Texas at Austin, USA; Bassem Elkarablieh, University of Texas at Austin, USA; Yai O. Laleye, University of Texas at Austin, USA; and Sarfraz Khurshid, University of Texas at Austin, USA

Modelling 2

• Inferring Finite-State Models with Temporal Constraints, Neil Walkinshaw, The University of Sheffield, United Kingdom; and Kirill Bogdanov, The University of Sheffield, United Kingdom
• Type-checking Software Product Lines - A Formal Approach, Christian Kästner, University of Magdeburg, Germany; and Sven Apel, University of Passau, Germany
Requirements & Evolution

- Using Simulation to Investigate Requirements Prioritization Strategies, Daniel Port, University of Hawaii, USA; and Alexey Olkov, University of Hawaii, USA; and Tim Menzies, West Virginia University, USA
- Automated Aspect Recommendation through Clustering-Based Fan-in Analysis, Danfeng Zhang, Key laboratory of High Confidence Software Technologies (Ministry of Education), P.R. China; Yao Guo, Key laboratory of High Confidence Software Technologies (Ministry of Education), P.R. China; and Xiangqun Chen, Key laboratory of High Confidence Software Technologies (Ministry of Education), P.R. China

Testing 3

- Predictive Typestate Checking of Multithreaded Java Programs, Pallavi Joshi, UC Berkeley, USA; and Koushik Sen, UC Berkeley, USA
- Improving Structure Testing of Object-Oriented Programs via Integrating Evolutionary Testing and Symbolic Execution, Kobi Inkumsah, North Carolina State University, USA; and Tao Xie, North Carolina State University, USA
- Automatic debugging of concurrent programs through active sampling of low dimensional random projections, Elad Yom-Tov, IBM Research, Israel; Rachel Tzoref, IBM Research, Israel; Shmuel Ur, IBM Research, Israel; and Shlomo Hoory, IBM Research, Israel

Maintenance

- How Program History Can Improve Code Completion, Romain Robbes, Università della Svizerra Italiana, Switzerland; and Michele Lanza, Università della Svizerra Italiana, Switzerland
- SpotWeb: Detecting Framework Hotspots and Coldspots via Mining Open Source Code on the Web, Suresh Thummalapenta, North Carolina State University, USA; and Tao Xie, North Carolina State University, USA
• Generic Patch Inference, Jesper Andersen, University of Copenhagen, Denmark; and Julia Lawall, University of Copenhagen, Denmark

Doctoral Symposium

• Unifying Analysis Tools with Rosetta, Nicolas Frisby, University of Kansas, United States, US
• Model-Driven Development of Mobile Applications, Florence Balagtas-Fernandez, University of Munich, Germany; and Heinrich Hussmann, University of Munich, Germany
• Automated Web Performance Analysis, Martin Pinzger, University of Linz, Austria
• Automatic Test Generation for LUSTRE/SCADE programs, Virginia Papailiopoulou, University of Grenoble 1, France
• Feature Interaction Detection in the Automotive Domain, Alma Juarez Dominguez, University of Waterloo, Canada
• Towards Good Enough Testing: A Cognitive-Oriented Approach Applied, Asem Eltaher, University of Braunschweig, Germany

ASE 2008 Workshops contents

• ARAMIS 2008 - First Int. Workshop on Automated engineeRing of Autonomic and run-tiMe evolving Systems
• Evol’08 4th International ERCIM Workshop on Software Evolution and Evolvability
• SoSEA 2008 First International Workshop on Social Software Engineering and Applications)
Posters

- Configuration Lifting: Verification meets Software Configuration, Hendrik Post, Carsten Sinz Research Group “Verification meets Algorithm Engineering”, Institute for Theoretical Computer Science, University of Karlsruhe, Germany
- Product Line Tools Are Product Lines Too: Lessons Learned from Developing a Tool Suite, Paul Grünbacher, Johannes Kepler University Linz, Austria; and Rick Rabiser, Johannes Kepler University Linz, Austria; and Deepak Dhungana, Johannes Kepler University Linz, Austria
- A Specification Language for Static Analysis of Student Exercises, Carsten Köllmann, T-Systems, Essen, Germany; and Michael Goedicke, University of Duisburg, Essen, Germany
- A Case Study on the Automatic Composition of Network Application Mashups, Maxim Shevertalov, Drexel University, USA; and Spiros Mancoridis, Drexel University, USA
- Predicting Effectiveness of Automatic Testing Tools, Brett Daniel, University of Illinois at Urbana-Champaign, Urbana, Illinois, USA; and Marat Boshernitsan Coverity, Inc., San Francisco, California, USA
- Distributed Constraints Maintenance in Collaborative UML Modeling Environments, Haifeng Shen, Nanyang Technological University, Singapore; and Siyuan Liu, Nanyang Technological University, Singapore; and Steven Xia, Nanyang Technological University, Singapore; and Chengzheng Sun, Nanyang Technological University, Singapore
- Software Cost Estimation using Fuzzy Decision Trees, Andreas S. Andreou, University of Cyprus, Nicosia, Cyprus; and Efi Papatheocharous, University of Cyprus, Nicosia, Cyprus
- Rhizome: A Feature Modeling and Generation Platform, Guozheng Ge, University of California, Santa Cruz, USA; and E. James Whitehead, Jr., University of California, Santa Cruz, USA
- Combining the Analysis of Spatial Layout and Text to Support Design Exploration, J. Michael Moore, Texas A&M University, USA; and Frank M. Shipman III, Texas A&M University, USA
- Using Cluster Analysis to Improve the Design of Component Interfaces, Rahmat Adnan, Delft University of Technology, The Netherlands; and Bas Graaf, Delft University of Technology, The Netherlands; and Arlie van Deursen, Delft University of Technology, The Netherlands; and Joost Zonneveld, ASML, The Netherlands
• Augmenting Counterexample-Guided Abstraction Refinement with Proof Templates, Thomas E. Hart, Department of Computer Science, University of Toronto, Canada; and Kelvin Ku, Department of Computer Science, University of Toronto, Canada; and Arie Gurfinkel, Carnegie Mellon University, USA; and Marsha Chechik, Department of Computer Science, University of Toronto, Canada; and David Lie, Department of Electrical and Computer Engineering, University of Toronto, Canada

• An Assume Guarantee Verification Methodology for Aspect Oriented Programming, Mustafa Ispir, Informatics Institute Middle East Technical University; and Aysu Betin Can, Informatics Institute Middle East Technical University

• Living with the Law: Can Automation Give Us Moore for Less?, Celina Gibbs, University of Victoria; and Jennifer Baldwin, University of Victoria; and Nieraj Singh, IBM Canada; and Maja D’Hondt, IMEC; and Yvonne Coady, University of Victoria;

• VCR: Virtual Capture and Replay for Performance Testing, Antonia Bertolino, Istituto di Scienza e Tecnologie dell’Informazione “A. Faedo”, Consiglio Nazionale delle Ricerche, Pisa, Italy; and Guglielmo De Angelis, Istituto di Scienza e Tecnologie dell’Informazione “A. Faedo”, Consiglio Nazionale delle Ricerche, Pisa, Italy; and Antonino Sabetta, Istituto di Scienza e Tecnologie dell’Informazione “A. Faedo”, Consiglio Nazionale delle Ricerche, Pisa, Italy

• A Case for Automatic Exception Handling, Bruno Cabral, CISUC, University of Coimbra, Portugal; and Paulo Marques, CISUC, University of Coimbra, Portugal

• DiffGen: Automated Regression Unit-Test Generation, Kunal Taneja, Department of Computer Science, North Carolina State University; and Tao Xie, Department of Computer Science, North Carolina State University

• An Automated Test Code Generation Method for Web Applications using Activity Oriented Approach, David A. Turner, Department of Computer Science, California State University San Bernardino; and Moonju Park, Department of Computer Science and Engineering, University of Incheon, Korea; and Jaehwan Kim, Department of Computer Science and Engineering, University of Incheon, Korea; and Jinseok Chae, Department of Computer Science and Engineering, University of Incheon, Korea

• The Consistency of Web Conversations, Jeffrey Fischer, Computer Science Department, University of California Los Angeles, USA; and Rupak Majumdar, Computer Science Department, University of California Los Angeles, USA; and Francesco Sorrentino, Computer Science Department, University of Salerno, Italy
• Testing Peers’ Volatility, Eduardo Cunha de Almeida, LINA - Université de Nantes; and Gerson Sunyé, LINA - Université de Nantes; and Yves Le Traon, IT-TELECOM Bretagne; and Patrick Valduriez, INRIA & LINA – Nantes

• Automated Continuous Integration of Component-Based Software: an Industrial Experience, Seojin Kim, Software laboratories, Samsung advanced institute of technology, Suwon, Korea; and Sungjin Park, Telecommunication R&D center, Samsung electronics, Suwon, Korea; and Jeonghyun Yun, Telecommunication R&D center, Samsung electronics, Suwon, Korea; and Younghoo Lee, Telecommunication R&D center, Samsung electronics, Suwon, Korea;

• A Two-Step Approach for Modelling Flexibility in Software Processes, Ricardo Martinho, Department of Informatics Engineering, School of Technology and Management Polytechnic Institute of Leiria, Portugal; and João Varajão, Department of Engineering, University of Trás-os-Montes e Alto Douro, Portugal; and Dulce Domingos, Department of Informatics, Faculty of Sciences, University of Lisboa, Portugal

• A generic approach for class model normalization, Jean-Rémy Falleri LIRMM, CNRS and Université Montpellier 2, France; and Marianne Huchard LIRMM, CNRS and Université Montpellier 2, France; and Clémentine Nebut LIRMM, CNRS and Université Montpellier 2, France

• XE (eXtreme Editor) - Bridging the Aspect-Oriented Programming Usability Gap, Wiwat Ruengmee, Department of Informatics, Donald Bren School of Information and Computer Sciences, University of California, Irvine, USA; and Roberto Silveira Silva Filho, Department of Informatics, Donald Bren School of Information and Computer Sciences, University of California, Irvine, USA; and Sushil Krishna Bajracharya, Department of Informatics, Donald Bren School of Information and Computer Sciences, University of California, Irvine, USA; and David F. Redmiles, Department of Informatics, Donald Bren School of Information and Computer Sciences, University of California, Irvine, USA; and Cristina Videira Lopes Department of Informatics, Donald Bren School of Information and Computer Sciences, University of California, Irvine, USA

• RAPID: Identifying Bug Signatures to Support Debugging Activities, Hwa-You Hsu, College of Computing, Georgia Institute of Technology; and James A. Jones, College of Computing, Georgia Institute of Technology; and Alessandro Orso, College of Computing, Georgia Institute of Technology

• Heuristics for Scalable Dynamic Test Generation, Jacob Burnim, EECS, UC Berkeley; and Koushik Sen, EECS, UC Berkeley
- Managing Models through Macromodeling, Rick Salay, Department of Computer Science, University of Toronto, Canada; and John Mylopoulos, Department of Computer Science, University of Toronto, Canada; and Steve Easterbrook, Department of Computer Science, University of Toronto, Canada.

- Cleman: Comprehensive Clone Group Evolution Management, Tung Thanh Nguyen, Electrical and Computer Engineering Department, Iowa State University; and Hoan A. Nguyen, Electrical and Computer Engineering Department, Iowa State University; and Nam H. Pham, Electrical and Computer Engineering Department, Iowa State University; and Jafar M. Al-Kofahi, Electrical and Computer Engineering Department, Iowa State University; and Tien N. Nguyen, Electrical and Computer Engineering Department, Iowa State University.

- Composition of Qualitative Adaptation Policies, Franck Chauvel, Triskell Project, INRIA/IRISA, Université de Rennes 1, France, Valoria, ALCC Group, Université de Bretagne Sud, France; and Olivier Barais, Triskell Project, INRIA/IRISA, Université de Rennes 1, France; and Isabelle Borne, Valoria, ALCC Group, Université de Bretagne Sud, France; and Jean-Marc Jézéquel, Triskell Project, INRIA/IRISA, Université de Rennes 1, France.

- A system for supporting development of large scaled Rich Internet Applications, Hiroaki Fukuda, Graduate School of Science and Technology, Keio University, Kohoku-ku, Hiyoshi, Yokohama, Japan; and Yoshikazu Yamamoto, Graduate School of Science and Technology, Keio University, Kohoku-ku, Hiyoshi, Yokohama.

- Discovering Patterns of Change Types, Beat Fluri, s.e.a.l. – software architecture and evolution lab, Department of Informatics, University of Zurich, Switzerland; and Emanuel Giger, s.e.a.l. – software architecture and evolution lab, Department of Informatics, University of Zurich, Switzerland; and Harald C. Gall, s.e.a.l. – software architecture and evolution lab, Department of Informatics, University of Zurich, Switzerland.

- Model-driven Development of Mobile Personal Health Care Applications, Abizer Khambati, Department of Computer Science and Department of Electrical and Computer Engineering, University of Auckland, Auckland, New Zealand; and John Grundy, Department of Computer Science and Department of Electrical and Computer Engineering, University of Auckland, Auckland, New Zealand; and James Warren, Department of Computer Science and Department of Electrical and Computer Engineering, University of Auckland, Auckland, New Zealand; and John Hosking, Department of Computer Science and Department of Electrical and Computer Engineering, University of Auckland, Auckland, New Zealand.
Demos

- Enforcing Structural Regularities in Source Code using IntensiVE, Johan Brichau, Université catholique de Louvain, Louvain-la-Neuve, Belgium; and Andy Kellens, Vrije Universiteit Brussel, Brussels, Belgium; and Kim Mens, Université catholique de Louvain, Louvain-la-Neuve, Belgium
- QuARS Express - A Tool Demonstration, A. Bucchiarone, Istituto di Scienze e Tecnologie dell'Informazione, CNR, Pisa, Italy; and S. Gnesi, Istituto di Scienze e Tecnologie dell'Informazione, CNR, Pisa, Italy; and G. Lami, Istituto di Scienze e Tecnologie dell'Informazione, CNR, Pisa, Italy; and G. Trentanni, Istituto di Scienze e Tecnologie dell'Informazione, CNR, Pisa, Italy; and A. Fantechi, Dipartimento di Sistemi e Informatica, Università degli studi di Firenze, Italy
- MTSA: The Modal Transition System Analyser, Nicolás D'Ippolito, FCEN, University of Buenos Aires, Argentina, Imperial College London, London; and Dario Fischbein, Imperial College London, London; and Marsha Chechik, University of Toronto Toronto, ON, Canada; and Sebastian Uchitel, Imperial College London, London, FCEN, University of Buenos Aires, Argentina
- MaramaEML: An Integrated Multi-View Business Process Modelling Environment with Tree-Overlays, Zoomable Interfaces and Code Generation, Lei Li, Department of Computer Science, University of Auckland, New Zealand; and John Hosking, Department of Computer Science, University of Auckland, New Zealand; and John Grundy, Department of Computer Science, University of Auckland, New Zealand, Department of Electrical and Computer Engineering, University of Auckland, New Zealand
- PTYASM: Software Model Checking with Proof Templates, Thomas E. Hart, Department of Computer Science, University of Toronto; and Kelvin Ku, Department of Computer Science, University of Toronto; and Arie Gurfinkel, Software Engineering Institute, Carnegie Mellon University; and Marsha Chechik, Department of Computer Science, University of Toronto; and David Lie, Department of Electrical and Computer Engineering, University of Toronto
- Semi-Automating Pragmatic Reuse Tasks, Reid Holmes, Laboratory for Software Modification Research, University of Calgary, Calgary, Alberta, Canada; and Robert J. Walker, Laboratory for Software Modification Research, University of Calgary, Calgary, Alberta, Canada
- **DULLY**: a framework for Architectural Languages and Tool Interoperability, Ivano Malavolta, Dipartimento di Informatica, Università dell’Aquila, Via Vetoio, 67100 L’Aquila, Italy; and Henry Muccini, Dipartimento di Informatica, Università dell’Aquila, Via Vetoio, 67100 L’Aquila, Italy; and Patrizio Pelliccione, Dipartimento di Informatica, Università dell’Aquila, Via Vetoio, 67100 L’Aquila, Italy

- Automated Mapping from Goal Models to Self-Adaptive Systems, Mirko Morandini, FBK-IRST, Trento, Italy; and Loris Penserini, Universiteit Utrecht, Utrecht, The Netherlands; and Anna Perini, FBK-IRST, Trento, Italy

- ADDSS: Architecture Design Decision Support System Tool, Rafael Capilla, Departamento de Ciencias de la Computación, Universidad Rey Juan Carlos, Madrid, Spain; and Francisco Nava, Departamento de Ciencias de la Computación, Universidad Rey Juan Carlos, Madrid, Spain; and Jesús Montes, Departamento de Ciencias de la Computación, Universidad Rey Juan Carlos, Madrid, Spain; and Carlos Carrillo, Departamento de Ingeniería y Arquitecturas Telemáticas, Universidad Politécnica de Madrid

- APPAREIL: A Tool for Building Automated Program Translators Using Annotated Grammars, Diego Ordóñez Camacho, Université catholique de Louvain, Belgium; and Kim Mens, Université catholique de Louvain, Belgium

- Rapid Model-Driven Prototyping and Verification of High-Integrity Real-Time Systems, Matteo Bordin, AdaCore, France; and Marco Panunzio, University of Padua, Italy; and Stefano Puri, Intecs, Pisa, Italy

- Save-IDE - An Integrated Development Environment for Building Predictable Component-Based Embedded Systems, Séverine Sentilles, Mälardalen University, School of Innovation, Design and Engineering, Västerås, Sweden; and Paul Pettersson, Mälardalen University, School of Innovation, Design and Engineering, Västerås, Sweden; and Ivica Crnkovic, Mälardalen University, School of Innovation, Design and Engineering, Västerås, Sweden; and Mälardalen University, School of Innovation, Design and Engineering, Västerås, Sweden; and John Håkansson, Uppsala University, Department of Information Technology Uppsala, Sweden

- The CLEM Toolkit, Daniel Gaffé, LEAT Laboratory, Univ. of Nice Sophia Antipolis CNRS, Valbonne France; and Annie Ressouche, INRIA, Sophia-Antipolis Méditerranée, Sophia Antipolis, FRANCE

- Tool Support for Parametric Analysis of Large Software Simulation Systems, Johann Schumann, RIACS/USRA, NASA Ames, Moffett Field, California; and Karen Gundy-Burlet, NASA Ames, Moffett Field, California; and Corina Pasareanu, QSS Inc, NASA Ames, Moffett Field, California; and Tim Menzies, Lane CS & EE, West Virginia University; and Tony Barrett, Jet
Propulsion Laboratory, California Institute of Technology, Pasadena, California

- ReqsCov: A Tool for Measuring Test-Adequacy Over Requirements, Matt Staats, Department of Computer Science and Engineering, University of Minnesota; and Weijia Deng, Department of Computer Science and Engineering, University of Minnesota; and Ajitha Rajan, Department of Computer Science and Engineering, University of Minnesota; and Mats P.E. Heimdahl, Department of Computer Science and Engineering, University of Minnesota; and Kurt Woodham, L-3 Enterprise IT Solutions, NASA IV&V Facility

- AspectM: UML-based Extensible AOM Language, Naoyasu Ubayashi, Kyushu Institute of Technology, Fukuoka, Japan; and Genya Otsubo, Kyushu Institute of Technology, Fukuoka, Japan; and Kazuhide Noda, Kyushu Institute of Technology, Fukuoka, Japan; and Jun Yoshida, Kyushu Institute of Technology, Fukuoka, Japan; and Tetsuo Tamai, University of Tokyo, Tokyo, Japan

- Tools for Traceability in Secure Software Development, Yijun Yu, The Open University, UK; and Jan Jürjens, The Open University, UK; and Jörg Schreck, Telefónica O2, Germany
