Preface

Welcome to the 2011 IEEE International Conference on Bioinformatics and Biomedicine (BIBM 2011) being held in Atlanta, Georgia, USA, on November 12-15, 2011. On behalf of the BIBM 2011 organizing team, we would like to thank you for your participation and hope you enjoy the conference.

Bioinformatics and biomedicine research is fundamental to our understanding of complex Biological systems, impacting the science and technology of fields ranging from agricultural and environmental sciences to pharmaceutical and medical sciences. This type of research requires close collaboration among multidisciplinary teams of researchers in computer science, statistics, physics, engineering, life sciences and medical sciences, and their interfaces. The IEEE International Conference on Bioinformatics and Biomedicine aims to provide an open and interactive forum to catalyze the cross-fertilization of ideas from these disciplines and to bridge our knowledge gaps.

BIBM 2011 promises to provide great scientific quality and to have a broad impact, with world-renowned scientists as keynote speakers and invited speakers, contributed talks at a highly competitive acceptance rate, special issue publications in well-known scientific journals, and the broad participation of the research community serving on the Program Committee and the organizing committees for workshops, tutorials, and posters.

The scientific program highlights four themes to provide breadth, depth, and synergy for research collaboration: (1) genomics and molecular structure, function, and evolution; (2) computational systems biology; (3) medical informatics and translational bioinformatics; and (4) cross-cutting computational methods and bioinformatics infrastructures, which includes 16 topics.

Since its inception in 2007, the BIBM conference has been growing both in size and global reach, from 136, 160, 233, and 355 research paper submissions in 2007, 2008, 2009, and 2010, respectively. This year we received 299 research paper submissions from 36 countries, which is the second highest number of submissions in the history of BIBM conferences. The Program Committee from 19 countries accepted 117 papers this year, of which 58 (19.4%) are regular research papers and 59 (19.7%) are short papers. In addition to three keynote speeches and a few invited talks from preeminent scientists and contributed talks from the accepted regular papers, the conference will feature a dozen workshops and three tutorials on special topics of interest, as well as poster sessions for accepted short papers and other submitted posters on topics relevant to bioinformatics and biomedicine. To broaden the reach of the scientific work presented at the conference, accepted research papers have been published in this IEEE Conference Proceedings, while workshop papers and poster abstracts have been published in the Workshop and Poster Proceedings. Special issues will be published in seven scientific journals: IEEE Transactions on NanoBiosciences, International Journal of Data Mining and Bioinformatics, BMC Bioinformatics, BMC Proteome Science, BMC Genomics, Proteomics, Journal of Network Modeling and Analysis in Health Informatics and Bioinformatics.
For the first time, BIBM 2011 establishes a new Industry track, to focus on papers that address the practical, applied, or pragmatic challenges related to the use of bioinformatics and biomedical technologies in industry. The Industrial Track accepted 5 papers describing implementations of bioinformatics and biomedicine solutions relevant to industrial settings and 5 abstracts.

We wish to thank all of the authors who submitted papers and participated in the conference. Our deepest appreciation goes to the 200+ researchers who served as Organizing Committee members, and Program Committee members for their extraordinary dedication and distinguished reviewing efforts to serve our scientific community. Finally, we would like to acknowledge the funding support from the National Science Foundation (NSF) in USA, IEEE Computer Society Technical Committee on Bioinformatics, IEEE Computer Society Technical Committee on Intelligence Informatics, Computer Science Department of Georgia State University. The Travel Awards support the participation of graduate students and early career researchers, especially those from underrepresented groups, while the Best Paper/Poster Awards promote the scientific excellence of young researchers in the field of bioinformatics and biomedicine. We would like to specially encourage the active participation of early career researchers and graduate students in future BIBM conferences as a training opportunity for our next generation of scientists and engineers!

Program Chairs
Fang-Xiang Wu, University of Saskatchewan, Canada
Mohammed Zaki, Rensselaer Polytechnic Institute, USA
Shinichi Morishita, University of Tokyo, Japan

Conference Chairs
Yi Pan, Georgia State University, USA
Stephen Wong, The Methodist Hospital Research Institute, USA

Industry Program Chairs
Anastasia Christianson, AstraZenica, USA

BIBM Steering Committee Chair
Xiaohua Hu, Drexel University, USA
