2010 IEEE International Conference on Bioinformatics and Biomedicine Workshops

**BIBM 2010 Workshops**

Table of Contents

**Keynotes:**

Progress and Prospect of Objectivity Study on Four Diagnostic Methods in Traditional Chinese Medicine................................................................................................................................. 3

*Yiqin Wang*

Medical Biometrics-Computerized TCM Diagnosis................................................................................................................................. 4

*David Zhang*

**Workshop 1: Graph Theoretic Analysis of Biological Networks**

Predicting Metabolic Pathways from Metabolic Networks with Limited Biological Knowledge................................................................................................................................. 7

*S.Y. Leung, Henry C.M. Leung, Lu Xiang, S.M. Yiu, and Francis Y.L. Chin*

PBSK Browser: navigate biological pathways of PSI-MI, BioPAX, SBML and KGML formats........................................................................................................................................ 13

*Donglin Huang, Yiling Huang, Christian Klukas, Ralf Hofstaedt, and Ming Chen*

Using Graph Modularity Analysis to Identify Transcription Factor Binding Sites........................................................................................................................................ 19

*Alexandre Francisco, Sophie Schbath, Ana Freitas, and Arlindo Oliveira*

**Workshop 2: Computational Proteomics**

Identification of core-attachment complexes based on maximal frequent patterns in protein-protein interaction networks........................................................................................................................................ 29

*Liang Yu, Lin Gao, and Chuiliang Kong*

Association Network Modeling from Microarray Data around fermentation stress response gene NSF1 (YPL230W) using Significantly Co-expressed Gene Set........................................................................................................................................ 35

*Kyrylo Bessonov, David K.Y. Chiu, and George van der Merwe*

Eighth-Sphere Exposure: A Three-Dimensional Solvent Exposure Measure........................................................................................................................................ 41

*Peipei Li, Ho Sun Shon, Gouchol Pok, and Keun Ho Ryu*
Fuzzy Soft Subspace Clustering Method for Gene Co-expression Network Analysis

Qiang Wang, Yunming Ye, Joshua Zhexue Huang, and Shengzhong Feng

An efficient hybrid of hill-climbing and genetic algorithm for 2D triangular protein structure prediction

Shih-Chieh Su, Cheng-Jian Lin, and Chuan-Kang Ting

Sparse Representation based feature selection for Mass Spectrometry Data

Jiqing Ke, Lei Zhu, Bin Han, Qi Dai, Yaojia Wang, Lihua Li, Shenhua Xu, Hanzhou Mou, and Zhiguo Zheng

Structural Analysis of (TCR–HLA/peptide Complexes: An Initial Study

Stephanus Daniel Handoko, Tran To Chinh Su, Chee Keong Kwoh, and Yew Soon Ong

Using a Spike-In Experiment to Evaluate Analysis of LC-MS Data

Leepika Tuli, Tsung-Heng Tsai, Rency Varghese, Amrita Cheema, and Habtom Ressom

FISH: Finding of Identical Spectra Set for Homogenous Peptide using Two-Stage Clustering Algorithm

Seungmook Lee, Min-Seok Kwon, Hyoong-Joo Lee, Young-Ki Paik, Jae K Lee, and Taesung Park

On the solution of molecular distance geometry problems with interval data

Carlile Lavoy, Leo Liberti, and Antonio Mucherino

Speed Improvements of Peptide-Spectrum Matching Using SIMD Instructions

Jian Zhang, Ian McQuillan, and FangXiang Wu

An adaptive approach to denoising tandem mass spectra

WenJun Lin, FangXiang Wu, Jinhong Shi, Jiarui Ding, and Wenjun Zhang

SyncPro: A Synchronized Visualization Tool for Differential Analysis of Proteomics Data Sets

Ling Sing Yung, Chao Yang, Mohammed Dakna, Harald Mischak, and Weichuan Yu

Prediction of Protein Structural Class Using a Combined Representation of Protein-sequence Information and Support Vector Machine

Li Wu, Qi Dai, Bin Han, Lei Zhu, and Lihua Li

Computing the Connectivity Indices of alpha- and beta-Cyclodextrins

Wu Jiang and Shenggui Zhang
A Binary Matrix Factorization Algorithm for Protein Complex Prediction ......................................................... 113
  Shikui Tu, Runsheng Chen, and Lei Xu

Network-based Modeling for Analyzing the Human Skin Microbiome ................................................................ 119
  Yingzhuo Wei, Shaowu Zhang, Chunhui Zhao, Feng Yang, and Quan Pan

SProt - From Local to Global Protein Structure Similarity .................................................................................. 124
  Jakub Galgonek and David Hoksza

SimpleTrPPI: A simple method for transferring knowledge between interaction networks for PPI prediction ........................................................................................................ 130
  Qian Xu, Hao Hu, Hong Xue, and Qiang Yang

Workshop 3: Mining and Management of Biological and Health Data

The Apriori Property of Sequence Pattern Mining with Wildcard Gaps .......................................................... 138
  Fan Min, Youxi Wu, and Xindong Wu

Selective Estimation of Least Squares Based Predictor and Efficient Overhead Management Algorithm for Lossless Compression of Digital Mammograms ........................................... 144
  Vinit Jakhetiya, Nitish Kumar Boyal and Anil Kumar Tiwari

A Hybridization Model for Tiling Array Analysis ............................................................................................ 148
  Quan Wang, Linbo Wang, Minping Qian, and Minghua Deng

Temporal Logics for Phylogenetic Analysis via Model Checking ....................................................................... 152
  Roberto Blanco, Gregorio De Miguel Casado, Jose Ignacio Requeno, and Jose Manuel Colom

Segmentation of CE Videos by Finding Convex Skin ........................................................................................ 158
  Balathasan Giritharan, Sandeep Panchakarala, and Xiaohui Yuan

Biological Data Classifications with LDA and SPRT ......................................................................................... 164
  Brittany Nkounkou, Colin Brown, Chih Lee, and Chun-Hsi Huang

Evol Optimer – Tool for Gene Expression Analysis .......................................................................................... 169
  Sairam G.L, Asha Vijayan, Gerald H. Lushington and Mahesh Visvanathan

Temporal Clustering of Gene Expression Patterns Using Short-Time Segments .............................................. 173
  Nguyen Nguyen, Yufei Huang, Shou-Jiang Gao, Yidong Chen, Merry Lindsey, Yufang Jin, and Ying Ann Chiao

Sardar Ansari, Kevin Ward, and Kayvan Najarian

Cluster-based Query Expansion Using Language Modeling in the Biomedical Domain
............................................................................................................................................. 185

Xuheng Xu and Xiaohua Hu

Using Topic-Concept Based Clustering for Genomic Information Retrieval in TREC............ 189

TengFei Jiang, TingTing He and Fang Li

Workshop 4: Integrative Data Analysis in Systems Biology

Quantitative Visualization of ChIP-chip Data by Using Linked Views.............................. 195

Min-Yu Huang, Gunther Weber, Xiao-Yong Li, Mark Biggin, and Bernd Hamann

Performance of DNA Data Embedding Algorithms under Substitution Mutations............ 201

David Haughton and Félix Balado

Extending boolean regulatory network models with Answer Set Programming.................... 207

Timur Fayruzov, Jeroen Janssen, Chris Cornelis, Dirk Vermeir, and Martine De Cock

A Weighted Structural Model Clustering Approach for Identifying and Analyzing Core Genetic Regulatory Modules................................................................. 213

Binhua Tang and Su-Shing Chen

Process Calculi for Systems Biology and Applications in Severe Asthma............................ 217

Caroline Baroukh, Anthony Rowe, and Yike Guo

CORAL-M: Heuristic COding Region ALignment Method for Multiple Genome Sequences
.................................................................................................................................................. 223

Che-Lun Hung, Chun-Yuan Lin, Yeh-Ching Chung, Shu Ju Hsieh, Chuan Yi Tang,
Shih-Cheng Chang, and Yaw-Ling Lin

Integrated Cellular and Gene Interaction Model for Cell Migration in Embryonic Development
............................................................................................................................................... 229

Hien Nguyen and Joe Song

Cellular Neural Networks, Navier-Stokes Equation and Microarray Image Reconstruction...... 234

Bachar Zineddin, Zidong Wang, and Xiaohui Liu

Analyzing Genetic Factors Involved in Recombinant Protein Expression Enhancement
.................................................................................................................................................... 240

Daniel Johnson, Keat Teoh, Cody Ashby, Elizabeth Hood, and Xiuzhen Huang

Zhe Liu, Yuanyuan Shen, and Jurg Ott

Detecting Gene-Gene Interactions Using Support Vector Machines with L1 penalty

.................................................................................................................................309
Yuanyuan Shen, Zhe Liu, and Jurg Ott

Selecting SNPs for Pharmacogenomic Association Study

.................................................................................................................................312
TaeJin Ahn, Kynghee Park, Dae-Soon Song, Nam Huh, Kyusang Lee, Taejung Bae,
Jung-Sun Park, So-Hee Oh, Ji-Hyun Lee, KyooHyung Rho, Sung Kim, and Tae Sung Park

A Scalable Method for Detecting Multiple Loci Associated with Traits using TF-IDF Weighting and
Association Rule Mining

.................................................................................................................................318
Sunwon Lee, Jaewoo Kang, and Junho Oh

Discovery of Multivariate Phenotypes using Association Rule Mining and their Application to
Genome-wide Association Studies

.................................................................................................................................324
Sung Hee Park and Sangsoo Kim

A Block-Based Evolutionary Optimization Strategy to Investigate Gene-Gene Interactions in Genetic
Association Studies

.................................................................................................................................330
Joel Fontanarosa and Yang Dai

cuGWAM : Genome-wide Association Multifactor Dimensionality Reduction using CUDA-enabled
High-performance Graphics Processing Unit

.................................................................................................................................336
Min-Seok Kwon, Kyunga Kim, Sungyoung Lee, and Taesung Park

A strategy for identifying multiple genetic factors for the multiple traits in genome wide association
studies: An application of hyperlipidemia in Korean population

.................................................................................................................................341
Ik-Soo Huh, Sohee Oh, Eunjin Lee, and Taesung Park

Unbalanced sample size effect on the genome-wide population differentiation studies

.................................................................................................................................347
Kyunghee Han, Kyeezu Kim, and Taesung Park

Two-way interaction analysis of Obesity Trait from Korean population Using Generalized
MDR

.................................................................................................................................353
Sungyoung Lee, Sohee Oh, Min-Seok Kwon, Seungyeoun Lee, and Taesung Park

KAREBrowser: SNP database of Korea Association REsource Project

.................................................................................................................................359

and Jong-Young Lee

BioSMACK: a Linux Live CD for Analysis of Genome-Wide association

.................................................................................................................................362

vi
Workshop 6: Bioinformatics for MicroRNA and Disease

Mathematical Analysis of HIV Dynamics: A New Learning Algorithm For Genetic Signal Representation

Amitabh Chaturvedi and Archana Tiwari

A Computational Framework for Predicting Drug Mode-of-Action

Chifeng Ma, Hung-I "Harry" Chen, Yufei Huang, and Yidong Chen

Incorporating miRNA target sites in protein-coding RNA

Dimitris Papamichail and Georgios Papamichail

Computational Prediction of microRNA Regulatory Pathways

Dong Yue, Yidong Chen, Shou-Jiang Gao, and Yufei Huang

A Composite Three-stage Normalization Method for cDNA Microarray Data

Mingjie Ma and Jinsoon Hwang

Workshop 7: Knowledge Engineering, Discovery and Dissemination in Health

Machine Science in Biomedicine: Practicalities, Pitfalls and Potential

Tom Kelsey and Hamish Wallace

Monitoring and Analysis of Sleep Pattern for People with Early Dementia

Haiying Wang, Huiru Zheng, Juan Augusto, Suzanne Martin, Maurice Mulvenna, William Carswell, Johnathson Wallace, Paul Jeffers, Barbara Taylor, and Kevin McSorley

Evaluation of Drowsiness during Driving based on Heart Rate Analysis - a driving simulation study

Masaru Tasaki, Wang Hui, Motoaki Sakai, Qun Jin, and Daming Wei

u-Healthcare System Protecting Privacy based on Cloaker

Seungjin Son, Kwangwoo Lee, Dongho Won, and Seungjoo Kim

Ontology-Based Knowledge Acquisition for Neuromotor Functional Recovery in Stroke

Christopher Townsend, Jingshan Huang, Dejing Dou, Haishan Liu, Lei He, Patrick Hayes, Robert Rudnick, Hardik Shah, Dennis Fell, and Wei Liu

Predicting Pelvic Trauma Severity Using Features Extracted from Records and X-Ray and CT Images
Simina Vasilache, Rebecca Smith, Jie Wu, Pavani Davuluri, Kayvan Najarian, Kevin Ward, and Charles Cockrell

Semantic Characterization of Hypertrophic Cardiomyopathy Disease

Catia M. Machado, Francisco Couto, Alexandra R Fernandes, Susana Santos, Nuno Cardim, and Ana Freitas

A Time-Series Approach for Shock Outcome Prediction Using Machine Learning

Sharad Shandilya, Kayvan Najarian, and Kevin Ward

Identifying Inconsistencies in Multiple Clinical Practice Guidelines for a Patient with Co-morbidity

Marisela Mainegra Hing, Martin Michalowski, Szymon Wilk, Wojtek Michalowski, and Ken Farion

A Unified Signal Processing and Machine Learning Method for Detection of Abnormal Heart Beats Using Electrocardiogram

Abed Al Raoof Bsoul, Soo-Yeon Ji, Kevin Ward, and Kayvan Najarian

Representing clinical documents to support automatic retrieval of evidence from The Cochrane Library

Dympna O'Sullivan, Wojtek Michalowski, Martin Michalowski, Szymon Wilk, and Ken Farion

Machine Learning of Patient Similarity: A Case Study on Predicting Survival in Cancer Patient after Locoregional Chemotherapy

LWC Chan, T Chan, LF Cheng, and WS Mak

Impedance Plethysmography on the Arms: Respiration Monitoring

Sardar Ansari, Ashwin Belle, Kevin Ward, and Kayvan Najarian

TissueWikiMobile: an Integrative Workbench for Pathology Knowledge Retrieval and Sharing Annotations of Histological Images on a Mobile Device

Chihwen Cheng, Todd Stokes, Sovandy Hang, and May D. Wang

A Multi-Agent Resource Allocation Framework for Patient Journey Shortening

Chung-ho Choi and William K. Cheung

Workshop 8: Data Mining for Biomarker Discovery

Comparison of Triple Negative Breast Cancer between Asian and Western Data Sets
Identification of Co-occurring Insertions in Cancer Genomes Using Association Analysis

Michael Steinbach, Haoyu Yu, and Vipin Kumar

A Model-driven Classification and Recursive Segmentation Method for Automatic Panel Extraction from Biological and Medical Papers

Xiaohui Yuan and Dongyu Ang

Projecting Partial Least Square and Principle Component Regression Across Microarray Studies

Chi-Cheng Huang, Shin-Hsin Tu, Heng-Hui Lien, Ching-Shui Huang, Eric Y. Chuang, and Liang-Chuan Lai

Position-specific Deformation Pattern of the Nucleosome DNA Revealed by Principal Component Analysis and Sequence Alignment-based Statistics

Xi Yang and Hong Yan

Develop Integration Modeling Approach for Discovery Neuraminidase Inhibitors in Silico Based on Pharmacophore and CoMSIA Models

Kuei-Chung Shih, Chun-Yuan Lin, Jiayi Zhou, Shih-Han Huang, and Chuan-Yi Tang

A Novel Peak Alignment Method for LC-MS Data Analysis Using Cluster-based Techniques

Feature Relation Network That Can Identify Underlying Data Structure for Effective Pattern Classification

Hai Long Zhu and Hong Qiang Wang

Imputing Missing Values in Microarray Data with Ontology Information

Andy C. Yang, Hui-Huang Hsu, and Ming-Da Lu

Workshop 9: Data-mining of Next-Generation Sequencing Data

On Accelerating Iterative Algorithms with CUDA: A Case Study on Conditional Random Fields Training Algorithm for Biological Sequence Alignment

Zhihui Du, Zhaoming Yin, Wenjie Liu, and David Bader

A Re-sequencing Tool for High Mismatch-tolerant Short Read Alignment Based on Burrows-Wheeler
Transfonn
Chen-Hua Lu, Chun-Yuan Lin, and Chuan Yi Tang

Peak detection on ChIP-Seq data using wavelet transformation
Heng-Yi Wu, Jie Zhang, and Kun Huang

In Search of True Reads: A Classification Approach to Next Generation Sequencing Data
Edward Wijaya, Jean-Francois Pessiot, Martin C. Frith, Wataru Fujibuchi, Kiyoshi Asai, and Paul Horton

Sorting Next Generation Sequencing Data Improves Compression Effectiveness
Raymond Wan and Kiyoshi Asai

bindSDb: A Binding-information Spatial Database
Damian Roqueiro, Jonna Frasor, and Yang Dai

A Distributed System for Fast Alignment of Next-Generation Sequencing Data
Jaydeep K. Srimani, Po-Yen Wu, John H. Phan, and May D. Wang

Methy-Pipe: An Integrated Bioinformatics Data Analysis Pipeline for Whole Genome Methylome Analysis
Peiyong Jiang, Xiaoxi Su, Zhang Chen, Kun Sun, Rossa W.K. Chiu, Y.M. Dennis Lo, and Hao Sun

Workshop 10: Information Technology for Chinese Medicine

Extracting Clinical Information from Free-text of Pathology and Operation Notes via Chinese Natural Language Processing
Qiang Zeng, Zuofeng Li, Weide Zhang, Xiaoyan Zhang, and Lei Liu

Syndrome differentiation of fatty liver based on the whole network analysis theory
Shouyi Yin, Guang Ji, Tao Liu, and Huafeng Wei

Goal Based Bisimulation for Testing Therapies in Traditional Chinese Medicine
Guang Zheng, Xiaojuan He, Miao Jiang, and Aiping Lu

Getting started in MeSH text mining to find the biological network shared with rheumatoid arthritis, coronary heart disease and diabetes mellitus
Xiaorong Ding, Qinglin Zha, and Aiping Lu
