Message from the Program Chairs

BRACIS 2017

On behalf of the Organizing Committee, we would like to welcome all participants to the Brazilian Conference on Intelligent Systems (BRACIS 2017). BRACIS is a research discussion forum of international level, promoting scientific exchange among scientists and engineers of many Artificial and Computational Intelligence related disciplines.

BRACIS program selection relies on an international Program Committee. We would like to express our sincere gratitude to all the PC members and reviewers for their cooperation in the reviewing process. We very much appreciated their efforts, which guaranteed the high quality of the technical program.

The papers submitted to the conference represent a broad range of research developed in Brazil and other countries. We received 150 submissions, and after a rigorous reviewing process, we accepted 74 papers to the conference. The Conference Publishing Services (CPS), a division of the IEEE Computer Society Press published the accepted papers. We would like to thank all authors for submitting their work to BRACIS 2017.

The final program includes Technical Sessions organized around specific IA/IC topics and three keynote speakers: Albert Bifet, David W. Corne, and Peter Flach. We are also grateful to the local organization team, all the sponsors and volunteers for their valuable help that makes this conference possible.

Gustavo Enrique A. P. A. Batista, Universidade de São Paulo
Renato Tinós, Universidade de São Paulo
