Message from the CAR 2009 Conference Chair .........................................................xiii
CAR 2009 Organizing Committee ..............................................................................xiv

Session 1: Intelligent Control Systems and Optimization
Modeling and Characteristics Analysis of Intelligent Pneumatic Muscle
with Shape Memory Alloy Braided Shell .................................................................3
Binrui Wang, Weiyi Zhou, Yinglian Jin, Hong Xu, and Haisen Ke
The Research and Design of the Belt Grinder which Based on PLC .........................8
Huiqiang Wang, Jianjun Cui, Ying Zheng, and Minying Hu
Adaptive Tracking Control of Nonlinear Systems Using Neural Networks ...............12
Lin Niu and Liaoyuan Ye
Design of Output Feedback Controller for Neutral System with Distributed Delay .................................................................16
Shaohua Wang and Xiaoping Zhao
One Method to Evaluate the Safety of Train Control Center ....................................20
Peng Zhou, Hongze Xu, and Jianjun Hou
Improved PD Controller for AUV Bsed on MPSO ..................................................24
Chong Lv, Yong-Jie Pang, and Lei Zhang
A Common Lyapunov Function for a Class of Switched Descriptor Systems ............29
Ze-quan Gu, He-ping Liu, and Fu-cheng Liao
A Linear Cost Function Model and its Application .................................................32
Xiaorui Zhang
Optimal Allocation for Complex Systems' Safety .....................................................37
Yan Zhao and Zhong Han
Study of the Optimal Location and Size of Piezoelectric Actuator in Smart Structures ...........................................................................................................................................................................42

Jingjun Zhang, Weize Yuan, Liya Cao, and Ruizhen Gao

Fuzzy Logic Control on Smart Structure based on Optimal Placement of Piezoelectric Patch ...........................................................................................................................................................................47

Jingjun Zhang, Liya Cao, Weize Yuan, and Ruizhen Gao

Lateral-Direction Control via Reaction Control System ......................................................................................................................................................................................52

Liaoni Wu, Yimin Huang, and ChengLong He

A New Controller Controlling the Synchronous Communication between Different Chua’s Circuits ...........................................................................................................................................................................57

Hong Chen and Qun Ding

A Control-oriented Macroscopic Traffic Flow Model for Urban Diverse Intersections ......................................................................................................................................................................................62

Kaige Wen, Shiru Qu, and Yumei Zhang

A Machine Learning Method for Dynamic Traffic Control and Guidance on Freeway Networks ...........................................................................................................................................................................67

Kaige Wen, Shiru Qu, and Yumei Zhang

Urban Trunk Road Traffic Signal Coordinated Control Based on Multi-Objective Immune Algorithm ...........................................................................................................................................................................72

Pei Luo, Qian Ma, and Hui-xian Huang

A Team CGA Learning Method TCCLA ......................................................................................................................................................................................77

Yanbin Zheng and Zhansheng Mou

Model-based Control for 6-DOF Parallel Manipulator ...........................................................................................................................................................................81

Chifu Yang, Qitao Huang, Jingfeng He, Hongzhou Jiang, and Junwei Han

An Integrated Guide and Control Strategy to Enhance the Precision of Guidance Laws ...........................................................................................................................................................................85

Zhenhao Zhao, Yi Shen, and Qiang Wang

Intelligent Traffic Control System Based on DSP and Nios II ...........................................................................................................................................................................90

Haimeng Zhao, Xifeng Zheng, and Weiya Liu

Session 2: Robotics, Automation and Industry Application

Research on Manufacturability Evaluation Methods of Aeroengine Blade ...........................................................................................................................................................................97

HongJun Liu, Rong Mo, and QingMing Fan

Efficient Numerical Integration Method for Dynamic of Flexible Space Robots System ...........................................................................................................................................................................102

Fuyang Tian, Hongtao Wu, and Hongli Sun

Sensorless Rapid On-line Evaluation for Slide Level ...........................................................................................................................................................................107

Yuqing Zhou, Xuesong Mei, Dong Liu, Gedong Jiang, and Nuogang Sun

Research of Welding Robot Controlled by PMAC and ARM Two Processors ...........................................................................................................................................................................111

Xingang Miao, Su Wang, Zheng Yan, and Jiang Chen
A Method for Robust Nose Tip Location across Pose Variety in 3D Face Data ...........................................114

Jun Yang, Zhi-Wu Liao, Zhi-Wu Liao, and Zhen-Dong Wu

The Temperature and Stress Field Distribution of Muti-welding Seam Flat with Trailing Peening .................................................................118

Qinghua Bai and Yuejin Ma

RCP-based HIL Simulation and Control for 2-DOF Tracking Robot of Maneuvering Target .................................................................121

Zhizhong Tong, Hui Zhang, Zhengmao Ye, and Junwei Han

Design and Development of a 5-DOF Air-Bearing Spacecraft Simulator ..................................................................................................................126

Xu Jian, Bao Gang, Yang QinJun, and Li Jun

Research on Instrumental Error Compensation of Strap-down Inertial Navigation System ................................................................................................131

Jichao Jia, Suilao Li, Changshan Zhao, and Rui Long

Missile Autopilot Design Based on State Dependent Riccati Equation ...........................................................................................................134

Ping Sun and Kun Liu

A Principle of Trajectory Planning for an Autonomous Vehicle .........................................................................................................................139

Heping Hang, Gang Huo, and Zixia Gong

Wavelet Time Series ARMA Prediction on Cutting Vibration in Diamond Turning ..................................................................................................142

Liwei Li, Qiwen Ran, and Shen Dong

Performance Loss Model Based Forecasting Method of Robot Assembly Quality ..................................................................................................147

Pengzhong Li and Weimin Zhang

Cooperative Multi-Robot Monocular-SLAM Using Salient Landmarks ...........................................................................................................151

Ming Wu, Feifei Huang, Long Wang, and Jiyin Sun

A Distributed Multi-Robot Cooperative Hunting Algorithm Based on Limit-cycle ..................................................................................................156

Ming Wu, Feifei Huang, Long Wang, and Jiyin Sun

Development of a Dual-robot System for Parametric Surfaces Polishing .......................................................................................................161

Fengyun Lin, Xiaodong Wang, and Fengbo Lin

Fuzzy Backstepping Controllers for Two-Wheeled Self-Balancing Robot .......................................................................................................166

Xiaogang Ruan and Jianxian Cai

Control Modeling for Accelerator Leg of Robot Driver .................................................................................................................................170

Zhigang Niu and Yunping Sun

Structure Design and Simulation Analysis of the Double Meshing Gear Motor .................................................................................................175

Ruihu Li, Shimin Wei, Qizheng Liao, and Zhensong Ni

Research on Speed Robustness for Airborne Hydraulic Pump in the Circular Stress Accelerated Life Test ..................................................................180

Yong Sang and Zhanlin Wang

A Collision Predict Based Local Path Planning of Mobile Robots .....................................................................................................................185

Yang Gao and Shu-dong Sun
Multi-Robot Cooperated Sensor Networks Hierarchical Expanding Deployment and Perception Architecture .................................................................191
Zhigang Bing, Qiong Dang, Jingtai Liu, and Yuan Liu

Session 3: Signal Processing, Systems Modeling and Control

Performance Analysis of Gradient Adaptive Lattice Joint Processing Algorithm ..................................................................................................................199
Haibing Qi

Computer Assistance Image Processing Spores Counting .................................................................................................................................203
Pengyun Xu and Jigang Li

Dynamics Modeling and Maneuverability Simulation of the Unmanned Underwater Vehicle Hanging Torpedoes Externally ..................................................207
Jie Zhou and Shu-zong Wang

Double Mode Fuzzy Control of Gas Drainage System for Coal Local Ventilator ................................................................................................................211
Xian-Min Ma

A Composite Model Based on Shape for Fast Image Matching .................................................................................................................................216
Gang Xu and Wenxian Yang

Implementation of a Fast Reassembly Methodology for Polygon Fragment .................................................................................................................221
Gang Xu and Yi Xian

The Research of Granular Computing Applied in Image Mosaic .................................................................................................................................226
Gang Xu and Jing Cai

Using Quotient Image and Linear Subspace for Face Recognition under Arbitrary Illumination Conditions ..................................................................................231
Lin He, Jiwei Liu, Bo Zhang, and Zhiliang Wang

Disturbance Fuzzy Approach-based Sliding Mode Control on the Working Attitude Adjusting Device of ROV ..................................................................................235
Heping Liu and Zhenbang Gong

Face Verification base-on Hausdorff-Shape Context .................................................................................................................................240
Rerkchai Fooprateepsiri and Werasak Kurutach

The Automatic Compensation of Wheel-cutting’s Rotational Speed Based on Metallographic Sample Cutting Machine ..................................................245
Xuehua Ji, Jigang Li, Weilian Sun, Jianyong Ma, and Chaoying Guo

A New Method of SAR Image Reconstruction and Segmentation .................................................................................................................................249
Yingying Kong and Jianjiang Zhou

Hardware-in-the-Loop Simulation of Pure Electric Vehicle Control System .................................................................................................................254
Yang Zhu, Hao Hu, Guoqing Xu, and Zhiguo Zhao

An Efficient Gray-level Clustering Algorithm for Image Segmentation .................................................................................................................................259
Fan-Chei Cheng, Yu-Kung Chen, and Kuan-Ting Liu

Motion Detection with Entropy in Dynamic Background .................................................................................................................................263
Yu-Kung Chen, Tung-Yi Cheng, and Shuo-Tsung Chiu
Session 4: Intelligent Computing and Application

A Fuzzy Evaluation Approach for Bridge Based on Domain Knowledge .................................................................269
  Ming Chen
Modeling and Analysis of Multi-agent Coordination Using Nearest Neighbor Rules .............................................................273
  Xuesong Chen, Yimin Yang, Shutong Cai, and Jianping Chen
A New Rights Processing Method for DRM Systems ........................................................................................................278
  Lei Wang, Peiyu Guo, Jinhui Xie, Yingying Yao, and Jinchun Liang
A Simple On-Road Object Segmentation Approach in ITS System ................................................................................282
  Yongquan Xia, Jun Zhi, Min Huang, Weili Li, and Rui Ma
Detection of Ventricular Fibrillation by Support Vector Machine Algorithm .................................................................287
  Qun Li, Jie Zhao, and Yan-Na Zhao
Testing System of Hydraulic Head of Mine Pump Based on LabVIEW .................................................................................291
  Wenhai He
Optimization for Multi-Resources-Constrained Job Shop Scheduling Based on Three-level Heuristic Algorithm ................296
  Xiaoying Xi, Lili Jiang, and Qiang Zhang
Centralized Multisensor Unscented Joint Probabilistic Data Association Algorithm .........................................................................................301
  Xu-jun Guan, Guo-Sheng Rui, Xu Zhou, and Xiao-ping Xie
Image Processing and Modeling for Active Needle Steering in Liver Surgery ..............................................................306
  Bing Nan Li, Phu Binh Nguyen, S.H. Ong, Jing Qin, Liang Jing Yang, and C.K. Chui
A New Non-Linear Algorithm for 3D Reconstruction from Straight-line Optical Flow .........................................................................................311
  Zhen Chen, Ming Li, Shao-feng Jiang, Shui-gen Wei, and Yu Wang
Modeling and Key Technologies Study of Three-Stage Electro-Hydraulic Servo Valve .........................................................317
  Xiaochu Liu, Jingfeng He, Zhengmao Ye, Dacheng Cong, and Junwei Han
Research on IETM Technical Data Processing Method Based on XML and Relational Database ........................................321
  Heping Peng, Lili Jiang, Xiaoying Xi, and Huiyuan Ren
Application of Radial Basis Function Neural Network for Sales Forecasting .......................................................................325
  R.J. Kuo, Tung-Lai Hu, and Zhen-Yao Chen
Intelligent Vehicle Simulation and Debugging Environment Based on Physics Engine .........................................................................................329
  Feng Luo, Chu Liu, and Zechang Sun
An Improved Self-Adaptive Particle Swarm Optimization Approach for Short-Term Scheduling of Hydro System ...............334
  Shuangquan Liu and Jinwen Wang
A Modified Color Appearance Model of CIELAB
Quan Zhang, Zhenyu Gu, and Xinguo Ming
........................................................................................................339
The Research of Target Identification Based on Neural Network and D-S Evidence Theory
Yulan Hu, Xiaojing Fan, Huijing Zhao, and Bing Hu
........................................................................................................345
Research on Auto Compensation Technique of Strap-down Inertial Navigation Systems
Lun-dong Zhang, Jun-xiang Lian, Mei-ping Wu, and Zhi-qiang Zheng
........................................................................................................350
Utilizing Multi-Agent Modelling to Develop Urban Simulations
Jinfeng Ma, Feng Mao, and Wensheng Zhou
........................................................................................................354
Collective Management of Medical Information in a Decision Support System
Eunjeong Park, Heonshik Shin, and Hyo Suk Nam
........................................................................................................358
Session 5: Wireless Communication and Network
The Measurement and Maintenance System of the VRLAB Based on RFID
Shifeng Yang, Songtao Jin, and Zheng Xu
........................................................................................................363
A Modified Adaptive Algorithm for Formant Bandwidth in Whisper Conversion
Gang Lv and Heming Zhao
........................................................................................................368
Manufacturability Evaluation of Auto Panels Using Polychromatic Sets
Zhijian Zong, Xiaoying Xi, Lili Jiang, and Binbin Yang
........................................................................................................372
Research on Networking Simulation in TCN Simulation Training
Zhao-yong Fan, Zhi-chun Gan, Jian-jun Shen, and Wei Cheng
........................................................................................................376
A Kind of WorldFIP Distributed Intelligent Measurement and Control Network Based on Single Neuron Predictive Identification Control Algorithm
Geng Liang
........................................................................................................380
A Kind of Communication Simulation System for WorldFIP Field Intelligent Control Network
Geng Liang and Guotian Yang
........................................................................................................385
Session 6: Innovative Computing, Control, Automation and Robotics
The Interaction between Chinese Export Price and World Import Price of Tangerines
Yu Zhao, Yu Zhang, and Chunjie Qi
........................................................................................................393
Method of 5-axis Spline Interpolation and Realization in CNC System
Liangji Chen
........................................................................................................398
The Design of Guidance on Suborbital Reentry
Liaoni Wu, Yimin Huang, and Jun Zhang
........................................................................................................402
Money Policy in Dynamic Stochastic General Equilibrium Models
Yang Liu and Li Li
........................................................................................................406
Study on Crack Forecast Model of Continuous Casting Slab
Jie Sun, Junxia Wang, and Zhengwei Liu
........................................................................................................410
A Kind of Algorithms for Euclidean Distance-Based Outlier Mining and its Application to Expressway Toll Fraud Detection .........................................................414
Zhijun Huang and Chuangwen Xia

A Novel Approach to Swarm Bot Architecture ...........................................................418
Vinay Kumar Pilania, Shaunak Mishra, Subrat Panda, and Aurosish Mishra

Quantitative Analysis for Requirements Evolution’s Ripple-Effect ..................................423
Yu-Qing Yan, Shi-Xian Li, and Xian-Ming Liu

A Global Terminal Adaptive Synchronization for the Modified Chua’s Circuits with Input Uncertainties and Unknown Parameters ...........................................428
Jinhua Wu, Junwei Lei, and Jinyong Yu

Design of an Intelligent Global Terminal Backstepping Controller for a Class
of Constrained Input Systems .........................................................................................433
Jinhua Wu, Junwei Lei, Jinyong Yu, and Zuoe Fan

An Improved Ultrasonic-Based Localization Using Reflection Method ................................437
Chen-Chien Hsu, Hsin-Chuan Chen, and Chien-Yu Lai

The Analysis on Angle Noise Produced by Blinking Jamming ........................................441
Ping Li, Xiao-ming Geng, Yan Zhang, and Zhen-gang Zhai

The Design of a Switched Reluctance Motor Drive System ...........................................445
Jiangbiao He, Guangzheng Liang, and Shihu Wang

A Geometry Calibration and Visual Seamlessness Method Based
on Multi-projector Tiled Display Wall .............................................................................450
Ya-Hui Liu, Qing-Xuan Jia, Han-Xu Sun, Jin-Ling Zhang, and Jie Su

A FOG Online Calibration Research Based on High-Precision Three-axis
Turntable ..............................................................................................................................454
Xu Bo and Sun Feng

Investigations on Detection Model of Large Scale Rotation Shaft Torsional
Vibration in Precision Heavy Machinery ..........................................................................459
Zhao Wu

A Novel Digital Lock-in Amplifier with Dual Channels ....................................................464
Dongyue Wu, Chao Wang, Hongjun Sun, and Huaxiang Wang

All Digital Phase Detection and Tracking Method to Subdivide the Grating
Moiré Fringe Signal .............................................................................................................469
Li Chang, Hui Xu, Yinggang Zhou, and Jinjie Zhang

Application of Wavelet Analysis in Fault Detection of Cell Phone Vibration
Motor ...............................................................................................................................473
Li Chang and Fenglin Luo

Structural Adaptation for Patch-Based Image Denoising ..................................................477
Xiaofeng Du, Cuihua Li, and Dunxu Yang

Heuristic Optimization Algorithm for Task Assignment in Collaborative
Project Based on CITIS ...............................................................................................481
Xingwen Zhao, Lili Jiang, Xiaoying Xi, and Muzhi Li
