# CASoN 2009

## Table of Contents

Message from Chairs ................................................................................................................... viii  
Organizing Committee ................................................................................................................ x  
International Scientific Committee/Reviewers ........................................................................... xii

### Regular Papers

Social Influence Models Based on Starbucks Networks ................................................................. 3  
*Minkyoung Kim, Byoung-Tak Zhang, and June-Sup Lee*

A Random Network Generator with Finely Tunable Clustering Coefficient for Small-World Social Networks ................................................................................................................................. 10  
*Weisen Guo and Steven B. Kraines*

Using a Matrix Decomposition for Clustering Data ....................................................................... 18  
*Hussam Dahwa Abdulla, Martin Polovinčak, and Václav Snášel*

A Performance of Centrality Calculation in Social Networks ...................................................... 24  
*Piotr Brodka, Katarzyna Musial, and Przemysław Kazienko*

Extended Generalized Blockmodeling for Compound Communities and External Actors ........................................................................................................................................................................................................... 32  
*Radosław Brendel and Henryk Krawczyk*

Enriching Trust Prediction Model in Social Network with User Rating Similarity ................................................................................................................................................................................................................. 40  
*Piotr Borzymek, Marcin Sydow, and Adam Wierzbicki*

On the Synergies between Online Social Networking, Face Recognition and Interactive Robotics ........................................................................................................................................................................................................... 48  
*Nikolaos Mavridis, Wajahat Kazmi, Panos Toulis, and Chiraz Ben-Abdelkader*

Social Network - An Autonomous System Designed for Radio Recommendation ........................................................................................................................................................................................................... 57  
*Grzegorz Dziczkowski, Lamine Bougueroua, and Katarzyna Wegryn-Wolska*
A Space-Based Layout Algorithm for the Drawing of Co-citation Networks ........................................65

Arnaud Quirin and Oscar Cordón

Social Group Identification and Clustering .................................................................73

Dušan Hůsek, Hana Řezanková, and Jiří Dvorský

Social Aspects of Web Page Contents .........................................................................80

Miloš Kudělka, Václav Snášel, Zdeněk Horák, and Ajith Abraham

Social Network Signatures: A Framework for Re-identification in Networked Data and Experimental Results .................................................................88

Shawndra Hill and Akash Nagle

Review-Based Ranking of Wikipedia Articles ................................................................98

Yasser Ganjisaffar, Sara Javanmardi, and Cristina Lopes

Detecting Communities in Large Networks by Iterative Local Expansion ................105

Jiyang Chen, Osmar R. Zaïane, and Randy Goebel

An Architecture to Facilitate Membership and Service Management in Trusted Communities .................................................................113

Seppo Heikkinen and Bilhanan Silverajan

The Graph Descriptors of E-content Unit Organisation and Controlling Features ........119

Jan Piecha and Marcin Bernaś

Short Papers

Sentence Factorization for Opinion Feature Mining ......................................................129

Chun-hung Li

The Hybrid Reasoning Algorithm of β-PSML .............................................................133

Yila Su

The Windmill Method for Setting up Support for Resolving Sparse Incidents in Communication Networks .................................................................137

Duco N. Ferro, Catholijn M. Jonker, and Alfons H. Salden

Discovering Communities of Interest in a Tagged On-Line Environment ................143

Walter Kammergruber, Maximilian Viermetz, and Cai-Nocilas Ziegler

Considerations for a Social and Geographical Framework for Agent-Based Epidemics .....................................................................................................149

Benoît Claude, Dimitri Perrin, and Heather J. Ruskin

Creation of Students’ Activities from Learning Management System and their Analysis .....................................................................................................155

Pavla Dráždilová, Kateřina Slaninová, Jan Martinovič, Gamila Obadi, and Václav Snášel

A Group-Based Model for Dynamic Communities ......................................................161

Carmen Morgado, José C. Cunha, Jorge Custódio, and Nuno Correia

Web Databases Descriptors Defined by Means of Pseudo – Natural Language Items .....................................................................................................165

Marcin Bernaś and Jan Piecha
