2014 IEEE 29th Conference
on Computational Complexity

CCC 2014

Table of Contents

Preface ........................................................................................................................................................viii
Committee Lists ..........................................................................................................................................ix
Awards ..........................................................................................................................................................x
Reviewers ..................................................................................................................................................xi

Wednesday June 11

Goldreich’s PRG: Evidence for Near-Optimal Polynomial Stretch .................................................................1
   Ryan O’Donnell and David Witmer

On the Power of Symmetric LP and SDP Relaxations ..................................................................................13
   James R. Lee, Prasad Raghavendra, David Steurer, and Ning Tan

Quantum Algorithms for Learning Symmetric Juntas via Adversary Bound ...........................................22
   Aleksandrs Belovs

On Physical Problems that are Slightly More Difficult than QMA ..............................................................32
   Andris Ambainis

AM with Multiple Merlins ..........................................................................................................................44
   Scott Aaronson, Russell Impagliazzo, and Dana Moshkovitz

Counting List Matrix Partitions of Graphs ...............................................................................................56
   Andreas Göbel, Leslie Ann Goldberg, Colin McQuillan, David Richerby, and Tomoyuki Yamakami

Counting the Number of Perfect Matchings in K_5-Free Graphs ...............................................................66
   Simon Straub, Thomas Thierauf, and Fabian Wagner

Hardness of Finding Independent Sets in 2-Colorable Hypergraphs and
of Satisfiable CSPs .....................................................................................................................................78
   Rishi Saket

Locally Dense Codes ....................................................................................................................................90
   Daniele Micciancio

On the Closest Vector Problem with a Distance Guarantee .........................................................................98
   Daniel Dadush, Oded Regev, and Noah Stephens-Davidowitz
Algorithms for Group Isomorphism via Group Extensions and Cohomology
Joshua A. Grochow and Youming Qiao

Thursday June 12

Low Influence Functions over Slices of the Boolean Hypercube Depend on Few Coordinates
Karl Wimmer
On the Sum of L1 Influences
Arturs Bačkurs and Mohammad Bavarian
A Composition Theorem for Parity Kill Number
Ryan O’Donnell, John Wright, Yu Zhao, Xiaorui Sun, and Li-Yang Tan
Recent Progress on Lower Bounds for Arithmetic Circuits
Shubhangi Saraf
Hitting Sets for Low-Degree Polynomials with Optimal Density
Venkatesan Guruswami and Chaoping Xing
Equivalence of Polynomial Identity Testing and Deterministic Multivariate Polynomial Factorization
Swastik Kopparty, Shubhangi Saraf, and Amir Shpilka
Noncommutative Determinant is Hard: A Simple Proof Using an Extension of Barrington’s Theorem
Craig Gentry
Direct Product Testing
Irit Dinur and David Steurer
A Parallel Repetition Theorem for Entangled Projection Games
Irit Dinur, David Steurer, and Thomas Vidick
A Parallel Repetition Theorem for Entangled Two-Player One-Round Games under Product Distributions
Rahul Jain, Attila Pereszlényi, and Penghui Yao

Friday June 13

A Pseudorandom Generator for Polynomial Threshold Functions of Gaussian with Subpolynomial Seed Length
Daniel M. Kane
Deterministic Approximate Counting for Juntas of Degree-2 Polynomial Threshold Functions
Anindya De, Ilias Diakonikolas, and Rocco A. Servedio
Linear List-Approximation for Short Programs (or the Power of a Few Random Bits)
Bruno Bauwens and Marius Zimand
