Session CIT-1: Wireless Communication and 5G Technologies (I)

Automatic Modulation Classification in Cognitive Radio Using Multiple Antennas and Maximum-Likelihood Techniques ................................................................. 1
Ahmed O. Abdul Salam, Ray E. Sheriff, Saleh R. Al-Araji, Kahtan Mezher, and Qassim Nasir

A Two-Tier Evolutionary Game Theoretic Approach to Dynamic Spectrum Sharing through Licensed Shared Access ................................................................. 6
Ahsan Saadat, Gengfa Fang, and Wei Ni

Adaptive Rate Control in Smart Grid Heterogeneous Communications Networks ................................................................. 12
Weifeng Zhong, Rong Yu, Yan Zhang, Yue Gao, and Stein Gjessing

Understanding Access Stability and Mobility Patterns of Mobile Internet Users ................................................................. 18
Yuan Li, Hao Jiang, Shuwen Yi, Chen Zhou, Lihua Wu, and Ming Wu
Application Sequence Prediction for Energy Consumption Reduction in Mobile Systems ........................................23

Ismat Chaib Draa, Jamel Tayeb, Smail Niar, and Emmanuelle Grislin

Reduced Complexity MIMO Receiver with Real-Valued Beamforming .................................................................31

Craig Miller, Wei Liu, and Richard J. Langley

Session CIT-2: Wireless Communication and 5G Technologies (II)

Exploiting the DASH Framework to Promote a Dynamic Transport Selection for Video Streaming over LTE Networks ..................................................................................................................................................37

Luis Diez, Ramón Agüero, Joel Penhoat, Emile Stéphan, and Fabien Heliot

Channel-Aware Scheduling in FFR-Aided OFDMA-Based Heterogeneous Cellular Networks ........................................................................................................................................................................................................44

Jan García-Morales, Guillem Femenias, and Felip Riera-Palou

Evidence Theory Based Self-Interference Suppression for Two-Way Full-Duplex MIMO Relays ........................................52

Yi Yang, Yanhua Sun, Enchang Sun, and Yanhua Zhang

SDR-Based ADS-B with Dual-Frequency for UAS: A Universal Design ........................................................................59

 Yueying Zhang, Keju Wang, and Hang Long

Acoustic Radar Weak Target Detection Method Based on Mellin Transform ................................................................64

Dinghe Wang, Qinglong Bao, and Zengping Chen

Hidden Markov Model for Improved Ultrasound-Based Presence Detection .................................................................68

Paola Jaramillo and Jean-Paul Linnartz

Session CIT-3: Wireless Sensor and Ad Hoc Networks

Minimization and Placement of Sensors in Structurally Observable Networks ..............................................................75

João Paulo Souza Medeiros, Paulo Sergio Motta Pires, João Batista Borges Neto, and Antonio Alfredo Ferreira Loureiro

Equalizing Energy Distribution in Sensor Nodes through Optimization of RPL ...............................................................83

Juuso Nurmio, Ethiopia Nigussie, and Christian Poellabauer

Collision-Free Routing Protocol in Multi-hop Wireless Sensor Networks ......................................................................92

Hicham Lakhlef, Julien Bourgeois, Saad Harous, and Jean Frédéric Myoupo

Measuring Distances with RSSI from Vehicular Short-Range Communications ..........................................................100

Roberto S. Yokoyama, Bruno Y. L. Kimura, Leandro A. Villas, and Edson D.S. Moreira

THESEUS: A Routing System for Shared Sensor Networks ................................................................................................108

Mohammadeza Iman, Flavia C. Delicato, Claudio M. de Farias, Luci Pirmez, Igor L. dos Santos, and Paulo F. Pires

Spanning Data Across Heterogeneous MANETs through Proactive Strip Interoperability ........................................116

Marco Antonio To, Jose Alvarez, Marcos Cano, and Stephane Maag
Session CIT-4: Management of Data and Database Systems

Analytical Performance Evaluation of Frame Synchronization for Data with Known, Unequal Distribution over Binary Symmetric Channel .......................................................... 125
  Boladale M. Isawhe and Maria G. Martini

Enhancing Aggregation over Uncertain Databases .................................................. 132
  Nermin Abdelhakim Othman, Ahmed Sharaf Eldin, and Doaa Saad Elzanfaly

FPGA Based Real Time 'Secure' Body Temperature Monitoring Suitable for WBSN ........................................... 140
  Muzaffar Rao, Thomas Newe, Ian Grout, Elfed Lewis, and Avijit Mathur

SSIE: An Automatic Data Extractor for Sports Management in Athletics Modality ............................................. 144
  Felipe Simões, Fabio Matsunaga, Armando Toda, Jacques Brancher, Abdallah Junior, and Rosangela Busto

Semantic Mapping Relational to a Directed Property Hypergraph Model .......................... 152
  Dewi Wisnu Wardani and Josef Küng

Session CIT-5: Information Security

Identifying and Classifying Suspicious Network Behavior Using Passive DNS Analysis ........................................... 160
  Kaio R.S. Barbosa, Eduardo Souto, Eduardo Feitosa, and Khalil El-Khatib

An Approach to IdM with Privacy in the Cloud ................................................................. 168
  Jorge Werner, Carla Merkle Westphall, Rafael Weingärtner, Guilherme Arthur Geronimo, and Carlos Becker Westphall

Dynamic Searchable Encryption with Multi-user Private Search for Cloud Computing ................................... 176
  Wenjun Luo, Yaqiong Chen, and Yousheng Zhou

Scalable Multi-group Key Management for Advanced Metering Infrastructure .......................... 183
  Mourad Benmalek, Yacine Challal, and Abdelmadjid Bouabdallahz

Personalized Privacy Aware Framework for Moving Objects in Participatory Sensing .......... 191
  Dorothy Kalui, Xi Guo, Dezheng Zhang, Yonghong Xie, and Zhiyong Yang

Session CIT-6: Pattern Recognition, Data Mining, and Artificial Intelligence (I)

SMART: An Application Framework for Real Time Big Data Analysis on Heterogeneous Cloud Environments ........................................................................................................ 199
  Julio C.S. dos Anjos, Marcos D. Assunção, Jean Bez, Claudio Geyer, Edison Pignaton de Freitas, Alexandre Carissimi, João Paulo C. L. Costa, Gilles Fedak, Felix Freitag, Volker Markl, Paul Fergus, and Rubem Pereira

Automatic Classification and Taxonomy Generation for Semi-structured Data .................. 207
  Bernardo Pereira Nunes, Giseli Rabello Lopes, and Marco Antonio Casanova

Artificial Intelligence for Detecting Preterm Uterine Activity in Gynecology and Obstetric Care .................................................................................................................. 215
  Ibrahim Olatunji Idowu, Paul Fergus, Abir Hussain, Chelsea Dobbins, Mohammed Khalaf, Raul V. Casana Eslava, and Robert Keight
A Novel Continuous Learning and Collaborative Decision Making Mechanism for Real-Time Cooperation of Humanoid Service Robots ...............................................................221
Ming Jiang and Li Zhang

An Optimization to CHARM Algorithm for Mining Frequent Closed Itemsets ..............................................................226
Xin Ye, Feng Wei, Fan Jiang, and Shaoyin Cheng

An Associative Classifier Adopting Fuzzy Weighted Rules Based on Information Gain .............................................236
Yi Chai, Guixia Kang, Ningbo Zhang, Yanyan Guo, and Jingning Wang

Combining Fuzzy Rough Set with Salient Features for HRM Classification ...............................................................244
Asia L. Jabar and Tarik A. Rashid

**Session CIT-7: Pattern Recognition, Data Mining, and Artificial Intelligence (II)**

Diffusion Least Mean Square Algorithms with Zero-Attracting Adaptive Combiners ..................................................252
Fuxi Wen and Wei Liu

Word-Sense Disambiguation of Korean Predicates Using Sejong Electronic Dictionary and Unsupervised Learning......................................................................................257
Sangwook Kang, Yeontaek Oh, Minho Kim, and Hyuk-chul Kwon

Marketing or Newsletter Sender Reputation System Using Association Analysis Concept ............................................................262
Akkarach Kawbunjun, Ubon Thongsatapornwatana, and Woraphon Lilakiatsakun

Feature Selection in Brain Computer Interface Using Genetics Method .............................................................................270
Aswinseshadri K and V. Thulasi Bai

Online Pedestrian Tracking Using Ensemble Color Feature .............................................................................................276
Bo Zhang, Yi Xu, and Xiaokang Yang

A Data-Driven Hybrid Optimization Model for Short-Term Residential Load Forecasting ...........................................283
Xiu Cao, Shuanshuan Dong, Zhenhao Wu, and Yinan Jing

**Session CIT-8: Pattern Recognition, Data Mining, and Artificial Intelligence (III)**

A Neural Network Clamping Force Model for Bolt Tightening of Wind Turbine Hubs .........................................................288
Emanuele Lindo Secco, Atulya Nagar, Christian Deters, Helge Wurdemann, Hak-Keung Lam, and Kaspar Althoefer

WARank: Weighted Asymmetric Ranking for Approximate Nearest Neighbor Search ................................................297
Yuan Cao, Heng Qi, Keqiu Li, Yingwei Jin, and Zhiyang Li

Fault Detection and Classification Based on PCA and N-LMC .......................................................................................305
Xiaoxin Zhang and Feng Liu

An Approach of Vector Space Model to Link Concrete Concepts with Wiki Entities .........................................................313
Lucas Borges Monteiro, Li Weigang, and Ahmed Abdelfattah Saleh

Multi-model or Single Model? A Study of Movie Box-Office Revenue Prediction ..........................................................321
Guijia He and Soowon Lee

An Experimental Evaluation of Aggregation Algorithms for Processing Top-K Queries ................................................326
Liang Zhu, Qin Ma, Wei Yi Meng, Mingqian Yang, and Fang Yuan
Model-Based Self-Tuning PI Control of Bolt-Nut Tightening for Wind Turbine Bearing Assembly .........................................................................................................................................................................................334

Christian Deters, Hak-Keung Lam, Mark Barrett-Baxendale, and Emanuele Lindo Secco

**Session CIT-9: Internet of Things**

Efficient CP-ABE Attribute/Key Management for IoT Applications ........................................................................................................................................................................................................................................................................................................343

Lyes Touati and Yacine Challal

A Proactive Multi-type Context-Aware Recommender System in the Environment of Internet of Things ........................................................................................................................................................................................................................................................................................................351

Yassmeen Salman, Abdallatif Abu-Issa, Iyad Tumar, and Yousef Hassouneh

Fog Computing in Healthcare Internet of Things: A Case Study on ECG Feature Extraction ........................................................................................................................................................................................................................................................................................................356

Tuan Nguyen Gia, Mingzhe Jiang, Amir-Mohammad Rahmani, Tomi Westerlund, Pasi Liljeberg, and Hannu Tenhunen

Rail Internet of Things: An Architectural Platform and Assured Requirements Model ........................................................................................................................................................................................................................................................................................................364

Mahmoud Hashem Eiza, Martin Randles, Princy Johnson, Nathan Shone, Jennifer Pang, and Amhmed Bhih

**Session CIT-10: Information Technology and Applications (I)**

Towards a UML Profile for Privacy-Aware Applications ........................................................................................................................................................................................................................................................................................................371

Tania Basso, Leonardo Montecchi, Regina Moraes, Mario Jino, and Andrea Bondavalli

Towards the Use of Unmanned Aerial Vehicles for Automatic Power Meter Readings ........................................................................................................................................................................................................................................................................................................379

Jose Rodrigues Torres Neto, Roberto Sadao Yokoyama, Azzedine Boukerche, Daniel Ludovico Guidoni, Rodolfo Ipólito Meneguette, and Leandro Aparecido Villas

Semantic Web Services Discovery Adopting SERIN ........................................................................................................................................................................................................................................................................................................387

José Renato Villela Dantas, Hermano Albuquerque Lira, Bruno de Azevedo Muniz, Tadeu Matos Nunes, and Pedro Porfírio Muniz Farias

A Taxonomy-Based Evaluation of Personalized E-Advertisement ........................................................................................................................................................................................................................................................................................................395

Dana A. Al Qudah, Alexandra I. Cristea, Suncica Hadziedic Bazdarevic, Samar Al-Saqqa, and Rizik M. H. Al-Sayyad

Linux Enriched Design in Third Generation Wireless Open Access Research Platform ........................................................................................................................................................................................................................................................................................................403

Muhammad Saad Saud, Anton Paatelma, Markku Jokinen, and Tuomo Hänninen

An Attributed Predicate RDF ........................................................................................................................................................................................................................................................................................................410

Dewi Wisnu Wardani and Josef Küng

**Session CIT-11: Information Technology and Applications (II)**

A Method of Handling Control Dependence in Dynamic Taint Analysis ........................................................................................................................................................................................................................................................................................................417

Xuefei Wang, Hengtai Ma, and Ke Yang

Dynamically Evolving Annotation-Based Variability for Runtime Adaptation ........................................................................................................................................................................................................................................................................................................423

Qinghua Zeng, Yinliang Zhao, Tan Tan, and Bo Han
An Extension of UML Activity Diagram to Model the Behaviour of Context-Aware Systems ................................................................. 431
Ahmed Al-alshuhai and François Siewe

A Dynamic Power-Aware Scheduling of Mixed-Criticality Real-Time Systems ................................................................. 438
Ijaz Ali, Jun-ho Seo, and Kyong Hoon Kim

Improving Network Efficiency with Simplemux .................................................................................................................. 446
Jose Saldana, Ignacio Forcén, Julián Fernández-Navajas, and José Ruiz-Mas

The Impact of Heterogeneous Spreading Abilities of Network Ties on Information Spreading .................................................................................................................. 454
Chengeng Ou, Xiaolong Jin, Yuanzhuo Wang, Wei Chen, and Xueqi Cheng

Technology and Information Trust for Supporting Risky Decisions Based on Social-Media Content ................................................. 461
Jason R.C. Nurse, Michael Goldsmith, Sadie Creese, and Koen Lamberts

Session CIT-12: Multimedia Application and QoS/QoE Provision and Estimation (I)

Network Quality Adaptive Video Transmission .................................................................................................................. 469
Fakher Oueslati and Jean-Charles Grégoire

DICE: A Distributed Protocol for Camera-Aided Video Surveillance .................................................................................................................. 477
Hanna Kavalionak, Claudio Gennaro, Giuseppe Amato, and Carlo Meghini

Recommendation Systems Based on Online User's Action .................................................................................................................. 485
Aymen Elkhelifi, Firas Ben Kharrat, and Rim Faiz

Videoconferencing over OpenFlow Networks: An Optimization Framework for QoS Routing .................................................................................................................................................. 491
Djamel-Eddine Henni, Abdelghani Ghomari, and Yassine Hadjadj-Aoul

Scorpion: A Solution Using Cooperative Rerouting to Prevent Congestion and Improve Traffic Condition .................................................................................................................................................. 497
Allan Mariano de Souza, Roberto Sadao Yokoyama, Leonardo Castro Botega, Rodolfo Ipolito Meneguette, and Leandro Aparecido Villas

ETBAC-Based Model in Media Oriented System Transport Network .................................................................................................................. 504
Shuaibing Lu, Zhiyi Fang, Guannan Qu, and Song Gao

Session CIT-13: Multimedia Application and QoS/QoE Provision and Estimation (II)

CHOKeD: Fair Active Queue Management .................................................................................................................. 512
Sanaullah Manzoor, Ghulam Abbas, and Masroor Hussain

On-the-Fly Process Resource Quarantine for System Stabilization .................................................................................................................. 517
Gaku Nakagawa, Hirotaka Kawata, and Shuichi Oikawa

A Novel QoS Routing Method for LEO Rosette Constellation Network .................................................................................................................. 525
Yuanyuan Zhang, Laitao Zhu, Jing Wu, Hao Jiang, Jianguo Zhou, Tianyi Cao, Zijing Cheng, and Zhaojun Wang
Remote Temporal Couplers for Multiple Content Synchronization .................................................................532
  Ricardo Mendes Costa Segundo and Celso Alberto Saibel Santos
Towards New Caching Strategy for Information-centric Networking Based on Data Proximity Control ..........................................................................................................................540
  Amine Abidi and Sonia Mettali Gammar

Session CIT-14: Computer Graphics/Image Processing
A Robust Face Recognition System Based on Curvelet and Fractal Dimension Transforms .........................................................................................................................................................548
  Alaa S. Al-Waisy, Rami Qahwaji, Stanley Ipson, and Shumoos Al-Fahdawi
Accelerating Brain Simulations on Graphical Processing Units ..............................................................................556
  Engin Kayraklioglu, Tarek El-Ghazawi, and Zeki Bozkus
Graph Grammar for the Research Information Collection Method According to Research Activities ..................................................................................................................................................561
  Youzou Miyadera, Chiaki Murakami, Koichi Anada, Yasuhiko Morimoto, Shoichi Nakamura, Hiroaki Kaminaga, and Takeo Yaku
BE-SIFT: A More Brief and Efficient SIFT Image Matching Algorithm for Computer Vision ...........................................................................................................................................................................568
  Jian Zhao, Hengzhu Liu, Yiliu Feng, Shandong Yuan, and Wanzeng Cai

Session CIT-15: Information Technology for Biomedicine and Smart Health
Robust Approach for Medical Data Classification and Deploying Self-Care Management System for Sickle Cell Disease ..........................................................................................................................................................................................575
  Mohammed Khalaf, Abir Jaafar Hussain, Dhiya Al-Jumeily, Russell Keenan, Paul Fergus, and Ibrahim Olatunji Idowu
Session Resumption-Based End-to-End Security for Healthcare Internet-of-Things .......................................................581
  Sanaz Rahimi Moosavi, Tuan Nguyen Gia, Ethiopia Nigussie, Amir-Mohammad Rahmani, Seppo Virtanen, Hannu Tenhunen, and Jouni Isoaho
Context-Aware Clinical Knowledge Sharing in Cross-Boundary E-Health: A Conceptual Model ...........................................................................................................................................................................589
  Obinna Anya, Hissam Tawfiik, and Dhiya Al-Jumeily
GARUDA: A New Geographical Accident Aware Solution to Reduce Urban Congestion ..................................................596
  Allan Mariano de Souza, Roberto Sadao Yokoyama, Nelson Luis Saldanha da Fonseca, Rodolfo Ipolito Meneguette, and Leandro Aparecido Villas

Session CIT-16: Utility Computing/Clouding Computing/Ubiquitous Computing
Stochastic Bounding Models for Performance Analysis of Clouds ..............................................................................603
  Farah Aït-Salah and Hind Castel-Taleb
Hybrid and Extensible Architecture for Cloud Infrastructure Deployment ........................................................................611
  Enrique Chirivella-Perez, Juan Gutiérrez-Aguado, Jose M. Claver, and Jose M. Alcaraz Calero
A New Lightweight Homomorphic Encryption Scheme for Mobile Cloud Computing ........................................618
Mohd Rizuan Baharon, Qi Shi, and David Llewellyn-Jones

Optimal Real Time Pricing Based on Income Maximization for Smart Grid ..................................................626
Sahar Ahmadzadeh and Kun Yang

Modelling the Data Aggregator Positioning Problem in Smart Grids ..............................................................632
Guilherme Rolim, Diego Passos, Igor Moraes, and Célio Albuquerque

A Zero-Penalty Container-Based Execution Infrastructure for Hadoop Framework ........................................640
Hang Su, Jiafeng Zhu, Masood Mortazavi, Guangyu Shi, and Dakai Zhu

Middleware Reconfiguration Relying on Formal Methods ..............................................................................648
Nelson Rosa

Session SOWN-1: Security & Optimization for Wireless Networks

Core-Selecting Auction Based Spectrum Allocation Scheme in Cognitive Femtocell Networks .........................655
Liang Bu-lin and Huang Chuan

An AGV Mechanism Based Secure Routing Protocol for Internet of Things ....................................................662
Youhua Xia, Hui Lin, and Li Xu

Session SMMA-1: Social Media Mining and Analysis

Usage and Consequences of Privacy Settings in Microblogs ........................................................................667
Elena Daehnhardt, Nick K. Taylor, and Yanguo Jing

Association Rules Mining Based on Clustering Analysis and Soft Sets .............................................................675
Bo Li, Zheng Pei, and Keyun Qin

Big Data Analytics in MOOCs .........................................................................................................................681
Yanyan Zheng and Beibei Yin

A Multi-criteria Review-Based Hotel Recommendation System ........................................................................687
Yashvardhan Sharma, Jigar Bhatt, and Rachit Magon

The Belief Degrees of Fuzzy Linguistic Values Based on a Fuzzy Formal Context ........................................692
Li Yan

Session WCTU-1: Character and Text Understanding

Recognition of Fuzzy Characters on Oracle-Bone Inscriptions ........................................................................698
Gao Feng, Xiong Jing, and Liu Yong-ge

LSA-Based Chinese-Slavic Mongolian NER Disambiguation .......................................................................703
Jiang Yupeng, Hou Hongxu, and Yang Ping

Ontology Description of Chinese Character Semantics ......................................................................................709
Jing Xiong, Xin Liu, and Qingsheng Li

Delaunay and Graph Modal-Based Bagua Layout Text Line Extraction for Shui Script ....................................714
Zhang Guofeng and Zhang Weiqin

A Novel Dynamic Description and Generation Method for Chinese Character ..............................................719
Qingsheng Li and Quan Liu
Session WNM-1: Wireless Network and Multimedia

Power-Aware QoS Provisioning in OFDMA Small Cell Networks .......................................................................................................................... 725
  Antonios Alexiou, Anastasios N. Bikos, and Christos Bouras

Power Management and Rate Control Mechanism for Wi-Fi Infrastructure Networks ......................................................................................... 731
  Christos Bouras, Vaggelis Kapoulas, Kostas Stamos, Nikos Stathopoulos, and Nikos Tavoularis

Empirical Performance Models for V2V Communications ................................................................................................................................. 737
  Miguel Sepulcre, Javier Gozalvez, Baldomero Coll-Perales, M. Carmen Lucas-Estañ, and Jose Ramon Gisbert

SoCar: A Social Car2Car Framework to Refine Routes Information Based on Road Events and GPS .................................................................................................................. 743
  Walter Balzano, Maria Rosaria Del Sorbo, and Domenico Del Prete

Power Optimization Technique in Interference-Limited Femtocells in LTE and LTE Advanced Based Femtocell Networks .......................................................... 749
  Shahrukh Khan and Sahibzada Ali Mahmud

Analyzing Linear Communication Networks Using the Ribosome Flow Model ........................................................................................................... 755
  Yoram Zarai, Oz Mendel, and Michael Margaliot

A Novel Secure SDN/LTE Based Architecture for Smart Grid Security .................................................................................................................. 762
  Asad Irfan, Nayab Taj, and Sahibzada Ali Mahmud

OpenGUFI: An Extensible Graphical User Flow Interface for an SDN-Enabled Wireless Testbed .................................................................................................... 770
  Joerg Schultz, Roman Szczepanski, Kay Haensge, Michael Maruschke, Nico Bayer, and Hans Einsiedler

HTTP Data Offloading Using Multipath TCP Proxy .................................................................................................................................................. 777
  Christos Pollalis, Paris Charalampou, and Efstathios Sykas

Session I-SOCA-1: Internet of Things: Smart Objects, Cloud, and Applications

Extending Event Elements of Business Process Model for Internet of Things .................................................................................................................. 783
  Hsiao-Hsien Chiu and Ming-Shi Wang

Mapping Security Requirements to Identify Critical Security Areas of Focus in PaaS Cloud Models .............................................................................. 789
  Alex Akinbi and Ella Pereira

Lightweight Forensics Application: Lightweight Approach to Securing Mobile Devices .............................................................................................. 795
  Helen Angela Brumfitt, Bob Askwith, and Bo Zhou

A Novel Network Topology in Underwater Visible Light Sensor Networks ......................................................................................................... 801
  Shih-Hao Chang, Rubem Pereira, and Kuei-Ping Shih

Virtual Resource Allocation and Composition for Data Stream Processing of Online Auditing in Cloud Computing .......................................................... 806
  Lei Wang and Tuo Li
Session IntelNet-1: Intelligent Communication and Social Networks
A Study of a Virtual Network Embedding Algorithm .................................................................814
   Zhen-hua Chen, Xiang-wei Zheng, and Dian-jie Lu
A Crisis Mitigation Policy for SLA Profit Maximization in Multitenant Database ........................................819
   Zhenkun Wang, Yongqing Zheng, Lanju Kong, and Zhiyong Chen
REODM: Identify Local Outliers in Big Data .............................................................................825
   Yongchang Gao, Haowen Guan, and Bin Gong
Global Index Oriented Non-Shard Key for Multi-tenant Database ..................................................831
   Xiao Zongshui, Lanju Kong, Qingzhong Li, and Pang Cheng
An Intention-Topic Model Based on Verbs Clustering and Short Texts Topic Mining ..........................837
   Tingting Lu, Shifeng Hou, Zhenxiang Chen, Lizhen Cui, and Lei Zhang
Performance and Resource Prediction at High Utilization for N-Tier Service Systems in Cloud an Experiment Driven Approach ..................................................................................843
   Wenbin Zhang, Yuliang Shi, Lei Liu, Lizhen Cui, and Yongqing Zheng

Session ITA-1: Information Technology and Applications (I)
Ontology-Based Requirements Generation for Credibility Validation of Safety-Critical System ..................................................................................................................849
   Rui Li, Shilong Ma, and Wentao Yao
Method to Develop Coded Excitation for Velocimetry in Downhole Drilling ........................................855
   Weijia Lu, Ran Niu, Longtao Yuan, Xin Qu, Heng Wu, and Jing Ye
Using Relational Algebra on the Specification of Real World ETL Processes ......................................861
   Vasco Santos and Orlando Belo
An Empirical Evaluation of Software Quality Assurance Practices and Challenges in a Developing Country ....................................................................................................................867
   Olaperi Yeside Sowunmi and Sanjay Misra

Session ITA-2: Information Technology and Applications (II)
Evaluating Open Source Software Quality Models Against ISO 25010 ...........................................872
   Adewole Adewumi, Sanjay Misra, and Nicholas Omoregbe
IVOrpheus - A Proposal for Interaction by Voice Commands in Three-Dimensional Environments of Information Visualization .................................................................................................878
   Lennon Furtado, Brunelli Miranda, Nelson Neto, and Bianchi Meiguins
Evaluating User Influence Based on the Properties of User in Social Networks ..................................884
   Yong Yao, Bian Li, and Lei Peng
Dealing with Uncertainties in Software Project Management ................................................................889
   Marcelo Marinho, Suzana Sampaio, Alexandre Luna, Telma Lima, and Hermano Moura
Towards a Distinction between Application State Resources and Data Resources in ROA .................................................................895
    Tadeu Matos Nunes, Pedro Portino Muniz Farias, José Renato Villela Dantas,
    Hermano Albuquerque Lira, Bruno de Azevedo Muniz, and Luiz Henrique S. Felix

Session ITA-3: Pattern Recognition, Data Mining, and Artificial Intelligence (I)

Mining Binary Data with Matrix Algebra ..........................................................901
    Ritu Chaturvedi and C.I. Ezeife

Rankboost-Based Result Merging ..................................................................907
    Benjamin Ghansah, Shengli Wu, and Nathaniel Ghansah

Blind Detection of Image Splicing Based on Fuzzy Run-Length .....................915
    Zenan Shi, Xuanjing Shen, Haipeng Chen, and Xiang Li

ITSR-HISL: An Improved Model for Trajectory Signature Recognition in Human
Interactive Sign Language ...........................................................................921
    Nehal F. Attia, Sherin M. Youssef, and Saleh M. Elkaffas

Session ITA-4: Pattern Recognition, Data Mining, and Artificial Intelligence
(II)

Adaptive Context-Sensitive Spelling Error Correction Techniques for the Extremely
Unpredictable Error Generating Language Environments ................................927
    Minho Kim, Sung-Ki Choi, Jingzhi Jin, and Hyuk-Chul Kwon

Practical Target Word Selection Method in Korean to Korean Sign Language Machine
Translation ........................................................................................................931
    Minho Kim, Sung-ki Choi, Aesun Yoon, and Hyuk-Chul Kwon

Methodology for an Open Digital Forensics Model Based on CAINE .................935
    Casimer Decusatis, Aparicio Carranza, Alassane Ngaide, Sundas Zafar,
    and Nestor Landaez

A Reliable Crisis Information System to Share Data after the Event of a Large-Scale
Disaster ...........................................................................................................941
    Marcello Cinque, Domenico Cotroneo, Christian Esposito, Mario Fiorentino,
    and Stefano Russo

Session ITA-5: Future Internet

Use Cases and Development of Software Defined Networks in OpenStack ................947
    Arti Mann, Wei Wei, Ravi Badana, Tong Zhang, and T. Andrew Yang

Euclidean Distance-Based QoS Metric for Dynamic MAP Selection in HMIPv6 Network ...............................954
    Esad Kadošić, Nataša Živic, Mirko Škrbic, Mesud Hadžialic, and Narcis Behlilovic

Real Time Bi-directional Traffic Management Support System with GPS
and WebSocket .................................................................................................959
    Md. Rahatur Rahman and Shamim Akhter
Session ITA-6: High Performance Computing
Power System Applications Integration for the Smart Grid .......................................................... 965
  Do Eun Oh and Hyun Soo Kim
Static Group Privacy Protection Mechanism Based on Cloud Model ........................................ 970
  Ruxiang Zhai, Kun Zhang, and Mingjun Liu
Tracking File’s Metadata from Computer Memory Analysis ..................................................... 975
  Khairul Akram Zainol Ariffin, Ahmad Kamil Mahmood, Jafreezal Jaafar, and Solahuddin Shamsuddin

Session ITA-7: Computer Graphics/Image Processing
Facial Expression Recognition with sEMG Method ................................................................. 981
  Mingzhe Jiang, Amir-Mohammad Rahmani, Tomi Westerlund, Pasi Liljeberg, and Hannu Tenhunen
A Correlated Topic Modeling Approach for Facial Expression Recognition ............................ 989
  Rouxin Sang and K.P. Chan
Improving Camera Pose Estimation for Indoor Marker-less Augmented Reality ....................... 994
  Sud Sudirman and Abdennour El-Rhalibi

Session MSNCom-1: Mobile Social Networking and Computing
Intelligent Mobile Framework Based on Swarm Computation ............................................... 1000
  Xinzheng Niu, Dazhuang Su, and Minhao Cheng
A Web Service Composition Method Based on Merging Genetic Algorithm and Ant Colony Algorithm .......................................................................................................................... 1007
  Zhengde Zhao, Xin Hong, and Shaohua Wang
The Research on Collaborative Filtering Recommendation Algorithm Based on Improved Clustering Processing ................................................................................................................. 1012
  Shaohua Wang, Zhengde Zhao, and Xin Hong
The Video Recommendation System Based on DBN ................................................................ 1016
  Cui Hongliang and Qin Xiaona
Content-centric Network-Based MANET for Streaming Video Transmission ......................... 1022
  Olfa Ben Rhami, Lamia Chaari Fourati, and Anis Masmoudi

Session WISH-1: Imaging and Sensor Technologies for Improved Healthcare
A Fast and Accurate Iris Localization Technique for Healthcare Security System .................... 1028
  Alaa S. Al-Waisy, Rami Qahwaji, Stanley Ipsopn, and Shumoos Al-Fahdawi
An Automatic Corneal Subbasal Nerve Registration System Using FFT and Phase Correlation Techniques for an Accurate DPN Diagnosis .......................................................... 1035
  Shumoos Al-Fahdawi, Rami Qahwaji, Alaa S. Al-Waisy, and Stan Ipsopn
Breast Cancer Detection Using 1D, 2D, and 3D FDTD Numerical Methods .............................. 1042
The Application of Full-Field Optical Coherence Tomography on Evaluating Film Coating of Pharmaceutical Pellets ................................................................. 1046
Jinke Zhang, Yaochun Shen, and Yalin Zheng

Smart Bolus Estimation Taking into Account the Amount of Insulin on Board ........................................... 1051
Ahmad M. Al-Taee, Majid A. Al-Taee, Waleed Al-Nuaimy, Zahra J. Muhsin, and Hamzah AlZu’bi

Channel Estimation for OFDM FFT/DWT in Multi-carrier Modulation Used in Wireless Telemmedicine ............................................................................................ 1057

Session IUCC-1: Sensor Networks and Ad Hoc Networks
Wear-I: A New Paradigm in Wearable Computing (Invited Paper) ................................................................. 1063
Jianhua Ma and Runhe Huang

Beaconless Geographic Routing Protocol with Adaptive Delay Timer in Wireless Sensor Networks ................................................................................................................................................... 1069
Jeongcheol Lee, SeokYoon Kang, ChungJae Lee, Kyong Hoon Kim, and Ki-Il Kim

Energy-Efficient Location Estimation Using Variable Range Beacons in Wireless Sensor Networks .................................................. 1074
Muhammad Farooq-i-Azam, Qiang Ni, Ejaz A. Ansari, and Haris Pervaiz

Energy Efficient Adaptive Cooperative Communications in Wireless Sensor Networks ........................................... 1080
Radwa Ahmed Osman, Xiao-Hong Peng, and Zuoyin Tang

XML Based Wireless Patient Monitoring System Using Vehicular Ad-Hoc Networks ........................................... 1087
Avleen Kaur Malhi and Shalini Batra

When Smart Phone Meets Vehicle: A New On-Board Unit Scheme for VANETs ........................................... 1095
Xiuqi Li, Yong Feng, Feng Wang, and Qian Qian

Probabilistic Area-Based Dissemination for Heterogeneous Transmission Ranges in Vehicular Ad-Hoc Networks ................................................................................................................................... 1101
Maryam M. Alotaibi and Hussein T. Mouftah

Session IUCC-2: Internet of Things
A Decentralized Batch-Based Group Key Management Protocol for Mobile Internet of Things (DBGK) ................................................................................................. 1109
Mohammed Riyadh Abdmeziem, Djamel Tandjaoui, and Imed Romdhani

A Dynamic Power Tuning for the Constrained Application Protocol of Internet of Things ........................................ 1118
Mamoun Qasem, Ahmed Al-Dubai, Imed, Romdhani, and Muneer Bani Yassien

E-Trickle: Enhanced Trickle Algorithm for Low-Power and Lossy Networks .............................................. 1123
Baraq Ghaleb, Ahmed Al-Dubai, and Elias Ekonomou
Session IUCC-3: Detection, Identification, and Recognition

Exploring Accuracy-Cost Tradeoff in In-Home Living Activity Recognition Based on Power Consumptions and User Positions .................................................................1130

Kenki Ueda, Hirohiko Suwa, Yutaka Arakawa, and Keiichi Yasumoto

Bootstrapping Personalised Human Activity Recognition Models Using Online Active Learning .................................................................................................................1138

Tudor Miu, Paolo Missier, and Thomas Plötz

Minutiae Based Automatic Fingerprint Recognition: Machine Learning Approaches ..................................................1148

Amjad Ali, Rehanullah Khan, Irfan Ullah, Adnan Daud Khan, and Abid Munir

Automatic Animal Detection from Kinect Sensed Images for Livestock Monitoring and Assessment .........................................................1154

Qiming Zhu, Jinchang Ren, David Barclay, Samuel McCormack, and Willie Thomson

Temporal Recursive Pedestrian Trajectory Identification for Multi-camera Surveillance System .................................................................................................................1158

Cong Shen, Rong Xie, and Liang Zhang

ECG Security Identification System on the Zynq SoC Platform ................................................................................1164

Xiaojun Zhai, Abbes Amira, and Faycal Bensaali

Session IUCC-4: Wireless Networks and Ubiquitous Networks

Integration of QoS Parameters from IEEE 802.11s WLAN Mesh Networks into Logical P2P Overlays .................................................................1170

Michael Rethfeldt, Peter Danielis, Björn Konieczek, Felix Uster, and Dirk Timmermann

A New Relay Node Selection Model for Wireless Community Mesh Networks .................................................................1178

Liang Zhao, Ahmed Y. Al-Dubai, Xianwei Li, and Guolong Chen

Joint Relay Selection and Resource Allocation for D2D-Enabled Cellular Communications .................................................................................................................1186

Guopeng Zhang, Ru Wang, Shuanshan Wu, Lin Chen, Bo Dai, Kun Yang, and Liqiang Zhao

Adaptive Current Level Control Algorithm For Battery-Powered ZigBee Network in Enterprise Settings .................................................................1193

Yitian Zhang, Kun Yang, and Xiao Wang

Increasing Interference Robustness of WiFi Fingerprinting by Leveraging Spectrum Information .................................................................1200

Filip Lemic, Arash Behboodi, Vlado Handziski, and Adam Wolisz

Channel Capacity Analysis of Blood Capillary-Based Molecular Communication .................................................................1209

Yue Sun, Kun Yang, and Qiang Liu

Performance Investigation and Comparison between Virtual Networks and Physical Networks Based on an Advanced Testbed Network .................................................................1216

Tong Li, Xiaodan Zhang, Zongzhen Liu, Jingguo Ge, Zhongjiang Yao, Yuepeng E, Yulei Wu, and Lei Zhang

xx
Session IUCC-5: Data Processing and Big Data

Prototyping and In-Depth Analysis of Big Data Benchmarking ................................................................. 1222
  *Divya Pandove and Shivani Goel*

Pota: Maximizing Profit for Task-Level Scheduling for Data Center Networks ........................................ 1230
  *Xiaoyi Tao, Heng Qi, Wenxin Li, Keqiu Li, and Yingwei Jin*

A Data Imputation Method Based on Deep Belief Network ........................................................................ 1238
  *Zhikui Chen, Siqian Liu, Kunyou Jiang, Han Xu, and Xinru Cheng*

DRISTI: Distributed Real-Time In-Situ Seismic Tomographic Imaging .................................................... 1244
  *Goutham Kamath, Wen-Zhan Song, Paritosh Ramanan, Lei Shi, and Junjie Yang*

Session IUCC-6: Resource Management and Scheduling

Load Scheduling Based on an Advanced Real-Time Price Forecasting Model ........................................... 1252
  *Xing Luo, Xu Zhu, and Eng Gee Lim*

On the Implementation of RT-FAIR Scheduling Framework in Linux ....................................................... 1258
  *Hang Su, Dakai Zhu, and Jiafeng Zhu*

Developing Energy-Aware Task Allocation Schemes in Cloud-Assisted Mobile Workflows .................... 1266
  *Bo Gao, Ligang He, Xin Lu, Cheng Chang, Kenli Li, and Keqin Li*

A Smartphone Management Method to Save Battery Using Bayesian Networks and Fuzzy System ........ 1274
  *Jun-Ho Kim and Sung-Bae Cho*

Session IUCC-7: Ubiquitous Computing and Ambient Intelligence

DIVINE: Building a Wearable Device for Intelligent Control of Environment Using Google Glass ................. 1280
  *Tamir Sobeih, Nick Whittaker, and Liangxiu Han*

Cost-Effective Hybrid Replacement Strategy for SSD in Web Cache ....................................................... 1286
  *Qu Li, Xiaofei Liao, Hai Jin, Li Lin, Xia Xie, and Qiongjie Yao*

Analysis of Urban Residential Water Consumption Based on Smart Meters and Fuzzy Clustering .............. 1295
  *Ji Yang, Yong Li, Nan Feng Zhang, Jing Feng Yang, Ke Kuang, Yue Hua Hu, and Wen Guang Qi*

Response Time in Switching Scents When Converting Scenes .................................................................... 1302
  *Shutaro Homma, Eri Matsuura, Sayaka Matsumoto, Shohei Horiguchi, and Ken-ichi Okada*

COVER: A Cooperative Virtual Force Robot Deployment Technique .......................................................... 1308
  *Gamal Sallam and Uthman Baroudi*

Assessing Physical Location as a Potential Contextual Cue For Adaptive Mobile Contact Lists ................. 1316
  *Athanasios Plessas, Olga Georgiadou, Vassilios Stefanis, Andreas Komninos, and John Garofalakis*
Anti-counterfeiting Using Irregularities of Magnetic Flux Density .................................................................1325

Hyunho Kang and Keiichi Iwamura

A Map-Reduce Method for Training Autoencoders on Xeon Phi ........................................................................1330

Qiongjie Yao, Xiaofei Liao, and Hai Jin

Universal Random Number Generation with Field-Programmable Analog Array and Magnetic Tunneling Junction (MTJ) Devices ........................................................................................................1338

Yu Bai and Mingjie Lin

Session IWSCA-1: Soft Computing and Applications

Integrated QoS Assessment of Web Services ........................................................................................................1344

Olga Georgieva and Dessislava Petrova-Antonova

On Induced Soft Sets and Topology for the Parameter Set of a Soft Set .........................................................1349

Zhicai Liu, Keyun Qin, Zheng Pei, and Jin Liu

A Consensus Model for Multiple Criteria Group Decision Making under Linguistic Environment .................................................................1354

Fen Zou, Liangzhong Yi, Zheng Pei, and Jing Liu

Entropy on Interval-Valued Intuitionistic Fuzzy Soft Set .....................................................................................1360

Yaya Liu and Keyun Qin

The Rough Set Model Based on Grade Indiscernibility Relation ........................................................................1366

Junfang Luo and Keyun Qin

Session ICTA-1: Innovative Computational Technologies and Its Applications

Estimation of Physical Activity Walking in Different Slopes Based on Accelerometer Approach .................................................................1372

Kai He, Jing-Xian Yao, and Hsien-Tsung Chang

Energy-Efficient Multimedia Multicast Scheduling and Resource Allocation Algorithms for OFDMA-Based Systems ........................................................................................................1377

Shih-Lin Wu and Wei-Wen Wang

Efficient Strategies of Compressing Three-Dimensional Sparse Arrays Based on Intel XEON and Intel XEON Phi Environments ........................................................................................................1383

Chun-Yuan Lin, Huang Ting Yen, and Che-Lun Hung

Trusted Platform Based Linux File Access Control .............................................................................................1389

Guang-liang Guo and Quan Qian

Efficient Brain MRI Segmentation Algorithm on TK1 ..........................................................................................1395

Che-Lun Hung, Chun-Yuan Lin, Yuan-Huai Wu, Hsiao-Hsi Wang, and Yu-Chen Hu

Voice Helper: A Mobile Assistive System for Visually Impaired Persons .................................................................1400

Kuei-Chun Liu, Ching-Hung Wu, Shau-Yin Tseng, and Yin-Te Tsai
Session MT4H-1: Mobile Technology for Healthcare

Walk and Jog Characterization Using a Triaxial Accelerometer ................................................................. 1406
  Jose David López, Angela Sucerquia, Leonardo Duque-Muñoz,
  and Francisco Vargas-Bonilla

Activity Tracker and Elderly .......................................................................................................................... 1411
  Peter Rasche, Matthias Wille, Sabine Theis, Katharina Schäefer, Christopher M. Schlick,
  and Alexander Mertens

Introducing Digital Wellness: Bringing Cyberpsychological Balance to Healthcare and Information Technology .............................................................. 1417
  Ciarán McMahon and Mary Aiken

Clustering of Physical Activities for Quantified Self and mHealth Applications ............................................. 1423
  Chelsea Dobbins and Reza Rawassizadeh

Session AUCN-1: Advances in Ubiquitous Computing and Networking (I)

A Simple Software Development Methodology Based on MVP for Android Applications in a Classroom Context ............................................................................................................................................. 1429
  Carmen N. Ojeda-Guerra

Travel Time Prediction on Highways .................................................................................................................. 1435
  Jan Rupnik, John Davies, Blaž Fortuna, Alistair Duke, and Sandra Stincic Clarke

A Combined Smartphone and Smartwatch Fall Detection System ........................................................................ 1443
  Thomas Vilarinho, Babak Farshchian, Daniel Gloppestad Bajer, Ole Halvor Dahl,
  Iver Egge, Sondre Steinsland Hegdal, Andreas Lenes, Johan N. Slettevold,
  and Sam Mathias Weggersen

CoRFL: A Connectivity Restoration Mechanism Using Fuzzy Logic in Wireless Actor and Sensor Networks ............................................................................................................................................................................. 1449
  Uthman Baroudi and Mohammed Aldarwbi

Inspired Counter Based Broadcasting for Dynamic Source Routing in Mobile Networks ........................................ 1455
  Muneer Bani Yassein and Ahmed Y. Al-Dubai

Development of ZigBee Triaxial Accelerometer Based Human Activity Recognition System .......................................................... 1460
  S. Irene, N.M. Shwetha, P. Haribabu, and R. Pitchiah

Session AUCN-2: Advances in Ubiquitous Computing and Networking (II)

Towards a Holistic Multi-cloud Brokerage System: Taxonomy, Survey, and Future Directions .......................................................... 1467
  Bandar Aldawsari, Thar Baker, and David England

C2@home - A Novel User-Side Cloud-of-Clouds Management Architecture ....................................................... 1473
  Antonella Di Stefano, Giovanni Morana, and Daniele Zito

Wireless Location Estimation Using Virtual Forces .......................................................................................... 1481
  Fahed H. Awad

xxiii
Towards a Mobile Assistive Technology for Monitoring and Assessing Cognitive Fatigue in Individuals with Acquired Brain Injury .................................................Edward Price, George Moore, Leo Galway, and Mark Linden

Susmit Bagchi

**Session BigData-1: Big Data and Smart Sustainable Society**

Towards a Semantic Layer to Support Road and Public Transport User Decision-Making .....................................................1498
Nicholas Gould and David Atkin

Development of an Integrated Agent for Greener Airport Operations ................................................................1504
Zhixing Yan and Mahroo Eftekhari

Big Data Computation for Workshop-Based Planning Support ................................................................................1510
Jianguang Tu, Jianquan Cheng, and Liangxiu Han

Implementation of the Big Data Management System for Demand Side Energy Management ........................................................................1515
Jungin Choi, Mijeom Kim, and Jaeweon Yoon

POPmine: Tracking Political Opinion on the Web ...............................................................................................................1521
Pedro Saleiro, Silvio Amir, Mário Silva, and Carlos Soares

Nudge Better Quantified-Self with Context-Aware and Proactive Services ................................................................................1527
Li Guo

Towards a Heterogeneous Compute Engine for Software Acceleration on Big Data Infrastructures ........................................1533
Christos Margiolas and Ioannis Manousakis

Predictive Models for Energy-Efficient Clouds: An Analysis on Real-Life and Synthetic Data ................................................................................1538
Albino Altomare and Eugenio Cesario

Towards Free Market Cloud Computing .........................................................................................................................1544
Jeremy Singer, Abyd Adhami, and Colin Perkins

**Session VEAI-1: Virtual Environments and Advanced Interfaces**

Separating Gesture Detection and Application Control Concerns with a Multimodal Architecture ......................................1548
Leonel Morgado, Bernardo Cardoso, Fausto de Carvalho, Luis Fernandes, Hugo Paredes, Luis Barbosa, Benjamim Fonseca, Paulo Martins, and Ricardo Rodrigues Nunes

The Potential of the Brain-Computer Interface for Learning: A Technology Review ......................................................1554
Leo Galway, Paul McCullagh, Gaye Lightbody, Chris Brennan, and David Trainor

Design of Novel Teaching Episodes in Medical Education Using Emerging Experiential Digital Assets: Technology Enabled Medical Education Beyond the Gimmicky .....................................................1560
Panagiotis E. Antoniou, Eleni Dafli, and Panagiotis D. Bamidis
Simulating Nature for Elderly Users - A Design Approach for Recreational Virtual Environments
Jon Ram Bruun-Pedersen, Stefania Serafin, and Lise Busk Kofoed

Playing Immersive Games on the REVERIE Platform
Ioannis Doumanis, Julie Wall, and David S. Monaghan

Hardware Interfaces for VR Applications: Evaluation on Prototypes
Markos Mentzelopoulos, Filippo Tarpini, Agazio Emanuele, and Aristidis Protopsaltis

The REVERIE Human Representation Addresses Issues Related to Virtual Presence, Communication, and Interaction in Collaborative Virtual Environments
Ioannis Doumanis, Daphne Economou, and Nektarios Georgalas

Lessons from Digital Puppetry: Updating a Design Framework for a Perceptual User Interface
Jeffrey Ferguson

Session IoT-Smart-1: Internet of Things and Smart Spaces
Survey on Clean Slate Cellular-IoT Standard Proposals
Wael Guibene, Keith E. Nolan, and Mark Y. Kelly

Performance Evaluation of the RPL Protocol in Fixed and Mobile Sink Low-Power and Lossy-Networks
Isam Wadhaj, Istvan Kristof, Imed Romdhani, and Ahmed Al-Dubai

Performance Evaluation of RPL Objective Functions
Mamoun Qasem, Hussien Altawssi, Muneer Bani Yassen, and Ahmed Al-Dubai

Empirical Experiments for Sensors' Distance Estimation in Smart Places
Nadhir Ben Halima, Yaser Khamayseh, Wail Mardini, and Abedl Rahman Almodawar

Level Crossing Rate of Ratio of Product of Two k-u Random Variables and Nakagami-m Random Variable
Dragana Krstie, Imed Romdhani, Muneer Masadeh Bani Yassein, Siniša Minic, Goran Petkovic, and Predrag Milacic

Session HWNQoE-1: Heterogeneous Wireless Networks and Quality-of-Experience
Content-Based Video Quality Prediction Using Random Neural Networks for Video Streaming over LTE Networks
Tarik Ghalut, Hadi Larijani, and Ali Shahrabi

OpenFlow 1.3 Extension for OMNeT++
Mukhald A. Salih, John Cosmas, and Yue Zhang

Medium Access Control Protocol to Address Hidden Terminals in MU-MIMO WLANs
Sanjeeb Shrestha, Gengfa Fang, Eryk Dutkiewicz, and Xiaojing Huang

Hata Path Loss Model Tuning for Cellular Networks in Irbid City
Omar Banimelhem, Muneer. M. Al-Zubai, and Mohammad S. Al Salameh

xxv
Session MultiCom-1: Multimedia Communications and Networking

Hybrid Clustered Peer-Assisted DASH-SVC System .................................................................1651
  Ran Dubin, Ofer Hadar, Yariv Freifeld, Aviv Ruham, Amit Dvir, Nissim Harel,
  and Refael Barkan

Video Quality in 5G Networks: Context-Aware QoE Management in the SDN Control
Plane ........................................................................................................................................1657
  Olatunde Awobuluyi, James Nightingale, Qi Wang, and Jose M. Alcaraz-Calero

Client QoE-Oriented Segment Selection for DASH .................................................................1663
  Mirghiasaldin Seyedebrahimi, Colin Bailey, and Xiao-Hong Peng

Anomalous Region Detection on the Mobility Data ...............................................................1669
  Huan Huo, Shangye Chen, Liang Song, Leiyu Ban, Zonghan Wu, Liang Liu, and Liping Gao

Block-Based Feature Adaptive Compressive Sensing for Video ............................................1675
  Xin Ding, Wei Chen, and Ian Wassell

Session DASC-1: Self-Protection and Intrusion-Detection (I)

Distributed Black Virus Decontamination and Rooted Acyclic Orientations ......................1681
  Jie Cai, Paola Flocchini, and Nicola Santoro

Towards Automated Generation and Visualization of Hierarchical Attack
Representation Models ............................................................................................................1689
  Fangcheng Jia, Jin B. Hong, and Dong Seong Kim

Predicting the Effects of DDoS Attacks on a Network of Critical Infrastructures ................1697
  William Hurst, Nathan Shone, and Quentin Monnet

Efficient Discovery of Malicious Symptoms in Clouds via Monitoring Virtual Machines ....1703
  Sultan S. Alshamrani, Dariusz R. Kowalski, and Leszek A. Gasieniec

Efficient Event Detection in Social Media Data Streams .......................................................1711
  Xiang Sun, Yan Wu, Lu Liu, and John Panneerselvam

Session DASC-2: Self-Protection and Intrusion-Detection (II)

A New Prime and Probe Cache Side-Channel Attack for Cloud Computing ......................1718
  Younis A. Younis, Kashif Kifayat, Qi Shi, and Bob Askwith

Evolutionary Virus Immune Strategy Based on Community Vitality ..................................1725
  Cai Fu, Li Min, Jia Yang, Deliang Xu, Xiao-Yang Liu, and Lansheng Han

CloudZombie: Launching and Detecting Slow-Read Distributed Denial of Service
Attacks from the Cloud ..........................................................................................................1733
  Saeed Shafieian, Mohammad Zulkernine, and Anwar Haque

Detection and Prevention of Malicious Requests in ICN Routing and Caching ...............1741
  Eslam G. AbdAllah, Mohammad Zulkernine, and Hossam S. Hassanein

A Three-Stage Process to Detect Outliers and False Positives Generated by Intrusion
Detection Systems ..................................................................................................................1749
  Fatma Hachmi, Khadouja Boujenfa, and Mohamed Limam

Towards Efficient Dissemination and Filtering of XML Data Streams ...............................................................1870
  Kirill Belyaev and Indrakshi Ray

CCTV as a Smart Sensor Network ...................................................................................................................1878
  Giles Oatley, Tom Crick, and Dee Bolt

Session DASC-6: QoS of Communications and Services (I)
Take Off a Load: Load-Adjusted Video Quality Prediction and Measurement .....................................................1886
  Ruairí de Fréin

PAM: A Packet Manipulation Mechanism for Mitigating Crosstalk Faults in NoCs .............................................1895
  Zahra Shirmohammadi, Mohsen Ansari, Sanaz Kazemi Abhari, Sepideh Safari,
  and Seyed Ghassem Miremadi

Correlation-Based Top-k Recommendation for Web Services ...............................................................................1903
  Qi Xie, Zibin Zheng, Lu Liu, and Mengtian Cui

Session DASC-7: QoS of Communications and Services (II)
The Impact of Hypervisor Scheduling on Compromising Virtualized Environments ...........................................1910
  Tsvetoslava Vateva-Gurova, Neeraj Suri, and Avi Mendelson

Incremental, Distributed, and Concurrent Scheduling in Systems-of-Systems
with Real-Time Requirements ..........................................................................................................................1918
  Roman Obermaisser and Ayman Murshed

Diverse Compiling for Microprocessor Fault Detection in Temporal Redundant Systems ..................................1928
  Andrea Höller, Tobias Rauter, Johannes Iber, and Christian Kreiner

Calligraphy Imitation System Based on Virtual Brush and Scale-Invariant Feature Transform ....................................1936
  Zhu Li, Li Jun, Hu Tao, and Xiang Jun

Session PASS4CI-1: Privacy, Data Assurance, Security Solutions for Cloud Computing and Internet-of-Things
Linear (k, n) Secret Sharing Scheme with Cheating Detection ............................................................................1942
  Yan-xiao Liu, Zhi-xiao Wang, and Wen-yao Yan

Session SocialSec-1: Social Computing and Security
A Fragment Classification Method Depending on Data Type ..................................................................................1948
  Ning Zheng, Jinlong Wang, Ting Wu, and Ming Xu

Don't Speak to Strangers: The Suspicious Strategy Can Help to Improve Cooperation in Spatial Donation Game ..........................................................1954
  Hong Ding, Junyao Huang, Yuangfang Chen, and Yizhi Ren

A Secure Authentication Scheme for Session Initiation Protocol Based on Elliptic Curve Cryptography ......................1960
  Shehzad Ashraf Chaudhry, Khalid Mahmood, Husnain Naqvi, and Muhammad Sher
Session CEWE-1: Cybercrimes and Emerging Web Environments

Counterfeiting and Defending the Digital Forensic Process ................................................................. 1966
Álvaro Botas, Ricardo J. Rodríguez, Teemu Väisänen, and Patrycjusz Zdzichowski

Mitigating Circumstances in Cybercrime: A Position Paper ................................................................. 1972
Raian Ali, John McAlaney, Shamal Faily, Keith Phalp, and Vasilios Katos

MP-Shield: A Framework for Phishing Detection in Mobile Devices .................................................. 1977
Giovanni Bottazzi, Emiliano Casalicchio, Davide Cingolani, Fabio Marturana, and Marco Piu

The Evidentiary Value of Link Files in Linux File System to Digital Forensic Investigation ................................................................. 1984
Tharmini Janarthanan and Shahrzad Zargari

Fast Mining of Large-Scale Logs for Botnet Detection: A Field Study ........................................... 1989
Giovanni Bottazzi and Giuseppe Francesco Italiano

Session SHPC-1: Sustainable High Performance Computing

Andrew A. Chien, Rich Wolski, and Fan Yang

Use HDLC Principles for Distributed Applications ........................................................................... 2002
Justin Y. Shi

AnKaCom: A Development and Experiment for Extreme Scale Computing .................................... 2010
Yasin Celik, Aakash Pradeep, and Justin Y. Shi

Session ASCC-1: Advances in Autonomic and Secure Computing and Communications

A Mobile Phone Device as a Biometrics Authentication Method for an ATM Terminal .................... 2017
Nabeel Ali Albahbooh and Patrick Bours

Human-Computer Interaction System for Communications and Control .......................................... 2025
Svetla Radeva and Dimitar Radev

Using Dropped Call as an Authentication Factor ............................................................................. 2031
Balwinder Sodhi

Function and Performance of Testing: Towards a Systemic View .................................................... 2036
Krzysztof M. Brzezinski

Session ASCC-2: Advances in Autonomic and Secure Computing and Communications

Autonomic Management Using Self-Stabilization for Hierarchical and Distributed Middleware .......... 2043
Maurice Djibril Faye, Eddy Caron, and Ousmane Thiaré

A Context Aware Reputation Mechanism for Enhancing Big Data Veracity in Mobile Cloud Computing ................................................................. 2049
Hui Lin, Jia Hu, Jiajia Liu, Li Xu, and Yulei Wu
Empirical Analysis of Rate Limiting + Leap Ahead (RL+LA) Countermeasure against Witty Worm
Khurram Shahzad and Steve Woodhead

Fuzzy Inference Based Intrusion Detection System: FI-Snort
Nitin Naik

Toward a Secure Android Software Protection System
Junfeng Xu, Li Zhang, Yunchuan Sun, Dong Lin, and Ye Mao

Session IBDS-1: Intelligent Big Data Systems
Computational Objectivity in Depression Assessment for Unstructured Large Datasets
Aaron Johnson, Paul Holmes, Lewis Craske, Marcello Trovati, Nik Bessis, and Peter Larcombe

Investigation of Energy Efficiency on Cloud Computing
Nathan Whittington, Lu Liu, Bo Yuan, and Marcello Trovati

A Semi-automated Assessment of the Direction of Influence Relations from Semantic Networks: A Case Study in Maths Anxiety
Marcello Trovati, Jayne Trovati, Peter Larcombe, and Lu Liu

Reducing Vehicular Traffic Congestion Using Available Forward Road Capacity Detection
James Hardy and Lu Liu

Session PICom-1: Ubiquitous Intelligence & Cyber-Physical Computing
Crowd Steering in Public Spaces: Approaches and Strategies
Andrea Sassi, Claudio Borean, Roberta Giannantonio, Marco Mamei, Dario Mana, and Franco Zambonelli

Performance Evaluation of Cyber-Physical Intrusion Detection on a Robotic Vehicle
Tuan Phan Vuong, George Loukas, and Diane Gan

A Smartphone-Based System for Personal Data Management and Personality Analysis
Ao Guo and Jianhua Ma

A Novel Image Quality Assessment Method Based on Vision Attention
Zehua Lan, Yu Li, and Xingang Liu

ShakeMe: Key Generation from Shared Motion
Hidir Yüzugüzel, Jari Niemi, Serkan Kiranyaz, Moncef Gabbouj, and Thomas Heinz

Session PICom-2: Artificial Intelligence & Knowledge Computing
A Rule-Based Ontology Reasoning System for Context-Aware Building Energy Management
Jinsoo Han, Youn-Kwae Jeong, and Ilwoo Lee

A Convolutional Neural Network for Leaves Recognition Using Data Augmentation
Chaoyun Zhang, Pan Zhou, Chenghua Li, and Lijun Liu

xxx
Neural Networks Based Formation Control of Anti-ship Missiles with Constant Velocity

Yuan Wang, Yongkun Wang, Mingwei Sun, Shengzhi Du, and Zengqiang Chen

Interactive Display Services for Smart Environments

Jens Naber, Dominik Schäfer, Sebastian VanSyckel, and Christian Becker

Prevent Cooking Risks in Kitchen of Elderly People: Adaptable Reasoning Engine Based on Fuzzy Logic for Smart Oven

Bessam Abdulrazak and Rami Yared

Parameter Optimisation for Location Extraction and Prediction Applications

Alasdair Thomason, Nathan Griffiths, and Victor Sanchez

Unified Structure and Data Driven Process for Knowledge Enrichment and Problem Solving

Atsushi Sato and Runhe Huang

Session PICom-3: Wireless Networks

Cooperative Socio-aware Dynamic Backoff Optimization for Urban VANETs

Matthias Sander Frigau

A Secure Cooperative Spectrum Sensing Strategy for Distributed Cognitive Radio Networks

Hui Lin, Jia Hu, Chuan Huang, and Li Xu

Backhaul Aggregation for Smart Homes in Heterogeneous Wireless Networks

Muhammad Asad Khan, Supeng Leng, Xiaoyan Huang, Jiechen Yin, and Bo Fan

FPGA Based Reconfigurable IPSec AH Core Suitable for IoT Applications

Muzaffar Rao, Thomas Newe, Ian Grout, Elfed Lewis, and Avijit Mathur

Session PICom-4: Intelligent Social Networking

Coalition Based Bandwidth Allocation in Mobile Social Networks

Bo Fan, Supeng Leng, Kun Yang, and Geyong Min

Context-Aware Service Discovery and Selection in Decentralized Environments

Mariwan Ahmed, Lu Liu, Bo Yuan, Marcello Trovati, and James Hardy

Pervasive Information Visualization: Toward an Information Visualization Design Methodology for Multi-device Co-located Synchronous Collaboration

Paul Craig, Xin Huang, Huayue Chen, Xi Wang, and Shiyao Zhang

The Mobile Tree Browser: A Space Filling Information Visualization for Browsing Labelled Hierarchies on Mobile Devices

Paul Craig and Xin Huang

The Robustness of Face-Based CAPTCHAs

Haichang Gao, Lei Lei, Xin Zhou, Jiawei Li, and Xiyang Liu
Session PICom-5: High Performance Computing

Design and Verification of Heterogeneous Streaming Parallel Mechanisms on Kepler CUDA ........................................................................................................................................................................2256
Kailong Zhang, Shaoli Zhou, Liang Hu, Hang Su, Xiao Wu, and Kejian Miao

PSO Based Multiobjective Reliable Optimization Model for Cloud Storage .......................................................................................................................2263
Xiyang Liu, Lei Fan, Liming Wang, and Sha Meng

Community Detection Algorithm Based on the Scale Free Property of Networks ...........................................................................................................2270
Xiyang Liu, Qiong Pan, Yingying An, and Guimin Qin

An Efficient Method for Document Categorization Based on Word2vec and Latent Semantic Analysis .....................................................................................................................................................2276
Ronghui Ju, Pan Zhou, Cheng Hua Li, and Lijun Liu

Water Quality Modeling for Pipeline Network Peripherals Based on Simulation of Water Age ............................................................................................................................................................................2284
Ji Yang, Yong Li, Nan Feng Zhang, Jing Feng Yang, Jian Tang, and Yong Xian Su

Session IoTBDH-1: Internet of Things and Big Data for Healthcare

Prediction and Guidance of Behaviour: A Web-Based Multipurpose Behaviour Intervention Investigation Methodology ........................................................................................................................................................................2291
Yang Fu and Wenyan Wu

Smart Health Monitoring Using the Advance Metering Infrastructure ........................................................................................................................2297
Carl Chalmers, William Hurst, Michael Mackay, and Paul Fergus

A Prostate Cancer Care Process Example of Using Data from Internet of Things ........................................................................................................2303
Emmanuel Eyo Effio, Enjie Liu, Hong Qing Yu, and Jon Hitchcock

Improving the Validity of Lifelogging Physical Activity Measures in an Internet of Things Environment ........................................................................................................................................................................2309
Po Yang, Martin Hanneghan, Jun Qi, Zhikun Deng, Feng Dong, and Dina Fan

Life-Logging Data Aggregation Solution for Interdisciplinary Healthcare Research and Collaboration ........................................................................................................................................................................2315
Zhikun Deng, Po Yang, Youbing Zhao, Xia Zhao, and Feng Dong

Improving Reliability of Message Broadcast over Internet of Vehicles (IoVs) ...........................................................................................................2321
Elias Eze C., Sijing Zhang, and Enjie Liu

Investigating Big Data Healthcare Security Issues with Raspberry Pi ........................................................................................................................2329
Xiaohua Feng, Babatunde Onafeso, and Enjie Liu

MyHealthAvatar: A Case Study of Web-Based Interactive Visual Analytics of Lifestyle Data ........................................................................................................................................................................2335
Farzad Parvinzamir, Youbing Zhao, Zhikun Deng, Xia Zhao, Nikolaos Ersotelos, Feng Dong, Enjie Liu, and Gordon Clapworthy

BPMN Security Extensions for Healthcare Process ........................................................................................................................................................................2340
Koh Song Sang and Bo Zhou
Cognitive Radio Aided Internet of Vehicles (IoVs) for Improved Spectrum Resource Allocation ..........................................................2346
  Joy Eze, Sijing Zhang, Enjie Liu, Elias E. Chinedum, and Hong Q. Yu

A Survey of Physical Activity Monitoring and Assessment Using Internet of Things Technology ................................................................................................................................................................2353
  Jun Qi, Po Yang, Dina Fan, and Zhikun Deng

Session PCIS-1: Pervasive Computing and Intelligence Systems

Sentiment Analysis Using Convolutional Neural Network ................................................................................................................2359
  Xi Ouyang, Pan Zhou, Cheng Hua Li, and Lijun Liu

Recognition of Dynamic Data Structures to Support Porting of Applications to the Cloud .................................................................2365
  Beniamino Di Martino and Antonio Esposito

Assist-Me - A Volunteer Mobile Emergency System to Assist Elderly People ....................................................................................2373
  Hady Khaddaj Mallat and Bessam Abdulrazak

A Dining Context-Aware System with Mobile and Wearable Devices ..................................................................................................2381
  Kee-Hoon Kim and Sung-Bae Cho

An Adaptable inVANETs-Based Intersection Traffic Control Algorithm ..............................................................................................2387
  Mourad Elhadef

Relay Node Deployment for Wireless Sensor Networks Based on PSO .................................................................................................2393
  Bao Yu, Wang Yuanping, Zhao Liang, Hu Yuan, and Zhang Aijuan

Author Index ......................................................................................................................................................................................2399
