## Contents

*Proceedings of the 29th Annual International Computer Software and Applications Conference*

**COMPSAC 2005**

Message from the Standing Committee Chair .......................................................... xiii
Message from the General Chair ................................................................................ xiv
Message from the Program Co-Chairs ..................................................................... xv
Committes ................................................................................................................ xvii
Reviewers ................................................................................................................ xix

### Keynote Address I

Industry Trends and Software Assurance ....................................................................... 3  
*G. Spittle*

### Software Testing (I)

Incremental Class Testing from a Class Test Order....................................................... 7  
*Y. Labiche*

Configuration-Oriented Symbolic Test Sequence Construction Method for EFSM .......... 13  
*S. Li, J. Wang, X. Wang, and Z.-C. Qi*

Iterative Metamorphic Testing ..................................................................................... 19  
*P. Wu*

Software Test Selection Patterns and Elusive Bugs....................................................... 25  
*W. E. Howden*

### Process Management

DIG: A Tool for Software Process Data Extraction and Grooming............................... 35  
*S. D. Miller, A. P. Mathur, and R. A. DeCarlo*

A Defect Estimation Approach for Sequential Inspection Using a Modified Capture-Re
capture Model ........................................................................................................... 41  
*C.-P. Chang, J.-L. Lv, and C.-P. Chu*

Parallel Changes: Detecting Semantic Interferences .................................................. 47  
*G. L. Thione and D. E. Perry*
Software Architecture and Metric

A Productivity Metric Based on Statistical Pattern Recognition ................................................................. 59
J. L. Sharpe and J. W. Cangussu

Optimizing and Simplifying Software Metric Models Constructed Using Maximum Likelihood Methods .......................................................... 65
V. K. Y. Chan and W. E. Wong

Structure Analysis for Dynamic Software Architecture Based on Spatial Logic ........................................ 71
T. Han, T. Chen, and J. Lu

Performability Analysis of a Pipeline Software Architecture ........................................................................ 77
S. S. Gokhale and S. Yacoub

Panel

High-Assurance Software for Mobile Tele-Health Systems

Moderator: J. C. Lacal
Panelists: F. Del Poxo
R. S. H. Istepanian
D. J. McClure

High-Assurance Software Design for Mobile Tele-Health Systems ............................................................ 85
J. C. Lacal

Wireless Security for Personalized and Mobile Healthcare Services ......................................................... 86
R. S. H. Istepanian

Software Reengineering and Service-Based Systems

An Extended Approach to Improving the Semantic Interoperation Among Reuse Repositories .................. 89
Y. Pan, L. Wang, L. Zhang, B. Xie, and F. Yang

An Empirical Study of a Reverse Engineering Method for Aggregation Relationship Based on Operation Propagation ............................................. 95
D. Yeh, P.-C. Sun, W. Chu, C.-L. Lin, and H. Yang

Adaptive Testing, Oracle Generation, and Test Case Ranking for Web Services ........................................ 101
W.-T. Tsai, Y. Chen, R. Paul, H. Huang, X. Zhou, and X. Wei

Situation-Awareness for Adaptive Coordination in Service-Based Systems ................................................ 107
S. S. Yau, D. Huang, H. Gong, and H. Davulcu

Middleware and Agent-Based Systems

Self-Configuring Communication Middleware Model for Multiple Network Interfaces .......................... 115
N. Mohamed

Using Aspect Oriented Techniques to Support Separation of Concerns in Model Driven Development ................................................................. 121
A. Solberg, D. Simmonds, R. Reddy, S. Ghosh, and R. France

Agent Oriented Programming Based on SLABS .......................................................................................... 127
J. Wang, R. Shen, and H. Zhu
### Intention Scheduling for BDI Agent Systems

*S.-B. Yan, Z.-N. Lin, H.-J. Hsu, and F.-J. Wang*

---

### Security and Privacy (I)

Detecting Intrusions Specified in a Software Specification Language

*M. F. Raihan and M. Zulkernine*

SecureC: Control-Flow Protection Against General Buffer Overflow Attack

*H. Nishiyama*

Buffer Overrun Prevention Through Component Composition Analysis

*D. Llewellyn-Jones, M. Merabti, Q. Shi, and B. Askwith*

Efficiently Managing Security Concerns in Component Based System Design

*A. Masood, S. Sedigh-Ali, and A. Ghafoor*

---

### Panel

**Industry and Academia: Can They Agree on Best Practice Within Software Engineering?**

**Moderator:** J. B. Thompson  
**Panelists:** M. Boasson, D. Simmons, S. Chen, P. Bourque

Industry and Academia: Can They Agree on Best Practice Within Software Engineering? ........................................... 173  
*J. B. Thompson*

Best Practices in Software Engineering: Does Anybody in Industry or Academia Care? ........................................... 174  
*S. Chen*

Principles Should Underlie Standards and Best Practices ............................................................................................ 175  
*P. Bourque*

---

### Requirement and Design (I)

The Vital Few Versus the Trivial Many: Examining the Pareto Principle for Software

*M. Gittens, Y. Kim, and D. Godwin*

Transitioning from Product Line Requirements to Product Line Architecture

*J. Savolainen, I. Oliver, M. Mannion, and H. Zuo*

Designing Controllers for Reachability ......................................................... 196  
*C. C. Seceleanu*

Melody Classification Using EM Algorithm .......................................................... 204  
*Y. Yoshihara and T. Miura*
Formal Methods

A Formal Approach to Designing a Class-Subclass Structure Using a Partial-Order on the Functions ................................................................. 213
  S. Kundu and N. Gwee
A Family of Extended Fuzzy Description Logics ........................................ 221
  Y. Li, B. Xu, J. Lu, D. Kang, and P. Wang
Extended Symbolic Transition Graphs with Assignment .................................. 227
  W. Deng and H. Lin
MetaWSL and Meta-Transformations in the FermaT Transformation System .... 233
  M. Ward and H. Zedan

Networked, Distributed, and Embedded Systems (I)

Using AOP to Monitor and Administer Software for Grid Computing Environments .... 241
  M. Grechanik, D. E. Perry, and D. Batory
Nearest Neighbor Queries on Extensible Grid Files Using Dimensionality Reduction ... 249
  R. Miyoshi, T. Miura, and I. Shioya
Power Transmission Control Using Distributed Max Flow .................................... 256
  A. Armbruster, M. Gosnell, B. McMillin, and M. L. Crow

Plenary Panel

Security and Privacy in Distributed Collaborative Systems

Chair:  S. S. Yau
Panelists:  P. Bonatti
          D. Feng
          J. Xiang
          B. Thuraisingham (see the position paper on page 561)

Security and Privacy in Collaborative Distributed Systems .............................. 267
  S. S. Yau
Rule Languages for Security and Privacy in Cooperative Systems ...................... 268
  P. Bonatti
Experiences on Intrusion Tolerance Distributed Systems ..................................... 270
  D. Feng and J. Xiang

Internet Web Systems

Tree-Map Visualization for Web Accessibility .................................................. 275
  J. Bailey and E. Burd
On Personal Data License Design and Negotiation ............................................. 281
  Y.-J. Joung, C. Yen, C.-T. Huang, and Y.-J. Huang
Adapting Single-Request/Multiple-Response Messaging to Web Services ............... 287
  M. Ruth, F. Lin, and S. Tu
A Web Data Extraction Description Language and Its Implementation .......................................................... 293
I.-C. Wu, J.-Y. Su, and L.-B. Chen

Verification and Validation

A Blocking-Based Approach to Protocol Validation .......................................................................................... 301
Y. Lei, D. Kung, and Q. Ye

J. Xia, Y. Ge, and C. K. Chang

Empirical Validation of Website Timeliness Measures .................................................................................... 313
Y. Zhang, H. Zhu, and S. Greenwood

Hybrid Intelligent Systems: Selecting Attributes for Soft-Computing Analysis .............................................. 319
P. Pattaraintakorn, N. Cercone, and K. Naruedomkul

Panel

Model-Based Software Testing and Verification

Moderator: A. P. Mathur
Panelists: M. P. E. Heimdahl
A. Jain
T. H. Tse
F. Belli

Model-Based Software Testing and Verification .............................................................................................. 329
A. P. Mathur

Model-Based Testing: Challenges Ahead ........................................................................................................... 330
M. P. E. Heimdahl

Model-Based Testing for Enterprise Software Solutions .................................................................................... 331
A. Jain

Research Directions on Model-Based Metamorphic Testing and Verification .................................................. 332
T. H. Tse

Mobile and Pervasive/Ubiquitous Computing

A Probabilistic Approach to the Anxious Home for Activity Monitoring ............................................................ 335
G. West, S. Greenhill, and S. Venkatesh

Exception Handling in Coordination-Based Mobile Environments .................................................................... 341
A. Iliasov and A. Romanovsky

A User-Adaptable User Interface Model to Support Ubiquitous User Access to EIS Style Applications ............... 351
J. Davis, A. Tierney, and E. Chang

A Dynamic Context-Conflict Management Scheme for Group-Aware Ubiquitous Computing Environments ....... 359
I. Park, D. Lee, and S. J. Hyun
Panel

21st-Century Global Software Development and Education

Moderator: D. B. Simmons
Panelists: C. Nelson
V. Livschitz
J. H. Cross II
X. Liu
J. B. Thompson

Twenty-First Century Software Production Paradigms ................................................................................... 367
D. B. Simmons

SSI, Academia and Industry Collaboration...................................................................................................... 368
C. Nelson

Conquering the Crisis in Software Engineering............................................................................................... 369
V. Livschitz

21st-Century Global Software Development and Education Position Statement ............................................ 370
J. H. Cross II

Collaborative Global Software Development and Education .......................................................................... 371
X. Liu

Future Software Development and Education—A U.K. View ........................................................................ 372
J. B. Thompson

Requirement and Design (II)

A Tool and Case Study for Specification-Based Program Review .................................................................. 375
F. Nagoya, S. Liu, and Y. Chen

Tridirectional Computed Chaining: An Efficient Hashing Algorithm for Limited Space
Applications ........................................................................................................................................... 381
M. Loeb and A. L. Tharp

A Requirement Engineering Approach for Designing XML-View Driven, XML Document
Warehouses.................................................................................................................................................. 388
V. Nassis, R. Rajugan, T. S. Dillon, and W. Rahayu

Structured Object-Oriented Co-Analysis/Co-Design of Hardware/Software for the
FACTS Power System .................................................................................................................................... 396
M. Ryan, S. Markose, X. Liu, B. McMillin, and Y. Cheng

Reliable Systems

Gompertz Software Reliability Model and Its Application ............................................................................. 405
K. Ohishi, H. Okamura, and T. Dohi

Software Reliability Growth Model Considering Testing Profile and Operation Profile ............................... 411
J. Zhao, H.-W. Liu, G. Cui, and X.-Z. Yang

RIES—Internet Voting in Action .................................................................................................................... 417
E. Hubbers, B. Jacobs, and W. Pieters
Two Variations to the mCESG Pollsterless E-Voting Scheme

T. Storer and I. Duncan

Keynote Address II

Towards a Model of Seamless Mobility—User Value and Security in Computing, Content, and Communications

J. Srinivas and S. Chen

Software Testing (II)

Towards Describing Black-Box Testing Methods as Atomic Rules

T. Murnane, R. Hall, and K. Reed

Testing the Semantics of W3C XML Schema

J. B. Li and J. Miller

Goal-Oriented Test Data Generation for Programs with Pointer Variables

A. Gotlieb, T. Denmat, and B. Botella

Coverage-Directed Test Generation with Model Checkers: Challenges and Opportunities

G. Devaraj, M. P. E. Heimdahl, and D. Liang

Testing Coverage Analysis for Software Component Validation

J. Gao, R. Espinoza, and J. He

Dependability and Fault Tolerance

Availability Evaluation of Hardware/Software Systems with Several Recovery Procedures

S. A. Vilkomir, D. L. Parnas, V. B. Mendiratta, and E. Murphy

A Comparison of Network Level Fault Injection with Code Insertion

N. Looker, M. Munro, and J. Xu

The Coordinated Recovery of Data Service and Transaction Service in J2EE

T. Liu, G. Huang, G. Fan, and H. Mei

A Low-Latency Checkpointing Scheme for Mobile Computing Systems

G. Li and L. Shu

Panel

How Democratic Will E-Democracy Be?

Moderators: S. Anderson and M. Felici
Panelists: I. Brown
J. Bus
A. Modi
P. Ryan

How Democratic Will E-Democracy Be? S. Anderson and M. Felici

Prospects for E-Voting................................................................................................................................. 501
P. Ryan

How Democratic Will E-Democracy Be?........................................................................................................ 502
J. Bus

Security and Privacy (II)

Automated Negotiation of Privacy Contracts .......................................................................................... 505
M. Maaser and P. Langendoerfer

A Novel Method for Protecting Sensitive Knowledge in Association Rules Mining.............................. 511
E. T. Wang, G. Lee, and Y. T. Lin

Protecting Users Against Phishing Attacks with AntiPhish...................................................................... 517
E. Kirda and C. Kruegel

A Performance-Based Grid Intrusion Detection System ............................................................................. 525
F.-Y. Leu, J.-C. Lin, M.-C. Li, and C.-T. Yang

Networked, Distributed, and Embedded Systems (II)

Scoped Broadcast in Dynamic Peer-to-Peer Networks.................................................................................. 533
H.-C. Hsiao and C.-T. King

Character Recognition System for Cellular Phone with Camera............................................................... 539
K. S. Bae, K. K. Kim, Y. G. Chung, and W. P. Yu

Towards a Contract Aware CORBA Component Container........................................................................ 545
E. Teiniker, R. Lechner, G. Schmoelzer, C. Kreiner, Z. Kovács, and R. Weiss

New Method for Dispatching Waiting Logical Processors in Virtual Machine Systems............................. 551
H. Umeno, M. Kiyama, T. Fukunaga, and T. Kubo

Trust Management in a Distributed Environment (This is the position paper of Bhavani Thuraisingham, a panelist of the plenary panel, which arrived late. Please see Plenary Panel: Security and Privacy in Distributed Collaborative Systems, page 267.) ........................................ 561
B. Thuraisingham

Author Index ..................................................................................................................................................... 563
