Message from the Standing Committee Chair........................................................................................................xiv
Greetings from the General Chair..........................................................................................................................xv
Welcome from the Program Chairs.....................................................................................................................xvi
Message from the Workshop Chair....................................................................................................................xvii
Conference Organization ........................................................................................................................................xviii
Program Committee ........................................................................................................................................xxii
Reviewers ....................................................................................................................................................xxvii
Keynotes ....................................................................................................................................................xxxiii
2009 IEEE/IPSJ COMPSAC/SAINT Joint Concluding Plenary Panel..............................................................................................................................................xxxix
Panel Description: Interoperable Identity Services.................................................................................................xli
Position Statement: Interoperable Identity Services -
“Challenges of Interoperable Identity Services for Software Services”.................................................................................................................................xlviv
Position Statement: Interoperable Identity Services...............................................................................................xlvii
Panel Description: Evolution of Services Computing
Curriculum and Services University ..............................................................................................................................l
Location Based Services I (Privacy Protection in Location Based Services)

A Privacy Enhancing Approach for Identity Inference Protection in Location-Based Services .................................................................1

_Chowdhury S. Hasan, Sheikh I. Ahamed, and Mohammad Tanviruzzaman_

ELALPS: A Framework to Eliminate Location Anonymizer from Location Privacy Systems ........................................................................11

_Mehrab Nonjur, Sheikh I. Ahamed, and Chowdhury S. Hasan_

Improvements for 802.11-Based Location Fingerprinting Systems ..................................................................................21

_Hendrik Lemelson, Stephan Kopf, Thomas King, and Wolfgang Effelsberg_

Location Based Services II (Privacy Protection in Location Based Services)

Enhancing the Scalability of IMS-Based Presence Service for LBS Applications ..................................................................................29

_Paolo Bellavista, Antonio Corradi, and Luca Foschini_

Indoor Navigation on Distributed Stationary Display Systems ..................................................................................37

_Peter Ruppel, Florian Gschwandtner, Corina Kim Schindhelm, and Claudia Linnhoff-Popien_

Software Evolution I (Software Architecture Development and Evaluation)

Aspectual Separation of Feature Dependencies for Flexible Feature Composition ..................................................................................45

_Kwanwoo Lee, Goetz Botterweck, and Steffen Thiel_

Initiating and Institutionalizing Software Product Line Engineering: From Bottom-Up Approach to Top-Down Practice ....................................53

_Dong Li and Carl K. Chang_

Transforming a Software Product Company into a Service Business: Case Study at F-Secure ..................................................................61

_Marko Komssi, Marjo Kauppinen, Juho Heiskari, and Matti Ropponen_

Viewpoint-Oriented Variability Modeling ...............................................................................................................................67

_Mike Mannion, Juha Savolainen, and Timo Asikainen_
Testing I (Context-aware Software Analysis)

3D Support for Business Process Simulation .................................................................73
   Daniel Eichhorn, Agnes Koschmider, Yu Li, Peter Stürzel, Andreas Oberweis,
   and Ralf Trunko

An Empirical Study of the Use of Frankl-Weyuker Data Flow Testing Criteria
to Test BPEL Web Services ..........................................................................................81
   Lijun Mei, W. K. Chan, T. H. Tse, and Fei-Ching Kuo

A Study of Applying Extended PIE Technique to Software Testability Analysis .............89
   Tsung-Han Tsai, Chin-Yu Huang, and Jun-Ru Chang

Testing II (Modularization, Composition and Reuse)

How Well Do Test Case Prioritization Techniques Support Statistical Fault
Localization .........................................................................................................................99
   Bo Jiang, Zhenyu Zhang, T. H. Tse, and T. Y. Chen

Automatic Discovery of Web Services Based on Dynamic Black-Box Testing ..................107
   Youngki Park, Woosung Jung, Byungjeong Lee, and Chisu Wu

An Improved Test Case Generation Method for Web Service Testing
from WSDL-S and OCL with Pair-Wise Testing Technique .............................................115
   Siripol Noikajana and Taratip Suwannasart

Testing III (Testing Economics, Models and Analysis)

An Economical Approach to Usability Testing .................................................................124
   Carl J. Mueller, Dan Tamir, Oleg V. Komogortsev, and Liam Feldman

A Sentence Generation Algorithm for Testing Grammars ................................................130
   Lixiao Zheng and Duanyi Wu

Software Input Space Modeling with Constraints among Parameters .............................136
   Sergiy A. Vilkomir, W. Thomas Swain, and Jesse H. Poore

HEAT: An Integrated Static and Dynamic Approach for Thread Escape
Analysis .................................................................................................................................142
   Qichang Chen, Liqiang Wang, and Zijiang Yang

Testing IV (Testing Theory, Methodology and Application)

Practical Extensions of a Randomized Testing Tool .........................................................148
   Hojun Jaygarl, Carl K. Chang, and Sunghun Kim

Asynchronous Input-Output Conformance Testing ..........................................................154
   Martin Weiglhofer and Franz Wotawa

Towards a Theory for Testing Non-terminating Programs .............................................160
   Arnaud Gotlieb and Matthieu Petit

Towards Call for Testing: An Application to User Acceptance Testing of Web
Applications .......................................................................................................................166
   Lian Yu, Wei Zhao, Xiaofeng Di, Changzhu Kong, Wenbo Zhao,
   Qianxiang Wang, and Jun Zhu
# Software Quality I (Software Quality Measurement, Modelling and Analysis)

Towards Improving OCL-Based Descriptions of Software Metrics ......................................................... 172  
*Tae Yeon Kim, Yun Kyu Kim, and Heung Seok Chae*

Modeling and Predicting Software Failure Costs .................................................................................. 180  
*Michael Grottke and Christian Graf*

A Service Discovery System Analyzed with a Queueing Theory Model ..................................................... 190  
*Beihong Jin, Haibin Weng, Yunfeng Wen, and Faen Zhang*

# Software Quality II (Software and Services Reliability Models)

A Hierarchical Reliability Model of Service-Based Software System ...................................................... 199  
*Lijun Wang, Xiaoying Bai, Lizhu Zhou, and Yinong Chen*

Applicability of Software Reliability Growth Modeling in the Quality Assurance Phase of a Large Business Software Vendor ........................................................................................................... 209  
*Arne Beckhaus, Lars M. Karg, and Gerrit Hanselmann*

Towards Transaction-Based Reliable Service Compositions ........................................................................ 216  
*Chang-ai Sun*

# Software Quality III (Software Quality Improvement Technique)

Toward Middleware-Based Online Application Migration ........................................................................... 222  
*Fang Deng, Qianxiang Wang, and Jin Shao*

Tool Support for Design Pattern Recognition at Model Level ................................................................... 228  
*Hong Zhu, Ian Bayley, Lijun Shan, and Richard Amphlett*

Predicting Change Impact in Object-Oriented Applications with Bayesian Networks ........................................ 234  
*M. K. Abdi, H. Lounis, and H. Sahraoui*

Modeling and Performance Analysis of Software Rejuvenation Policies for Multiple Degradation Systems ................................................................................................................................. 240  
*Xiaozhi Du, Yong Qi, Di Hou, Ying Chen, and Xiao Zhong*

# Social Networks I (Collaborative Networks)

Computing Reputation for Collaborative Private Networks ................................................................... 246  
*Jordi Nin, Barbara Carminati, Elena Ferrari, and Vicenç Torra*

Towards the Operational Semantics of User-Centric Communication Models ........................................ 254  
*Yingbo Wang, Yali Wu, Andrew Allen, Barbara Espinoza, Peter J. Clarke, and Yi Deng*

Software Outsourcing Subcontracting and Its Impacts: An Exploratory Investigation ............................... 263  
*Yi Wang and Huihui Shi*
Security I (Security Analysis and Protection Techniques)

Analyzing Semantics of Documents by Using a Program Analysis Method .......................................................... 373
  Hiroyuki Sato

Tamper Resistance for Software Defined Radio Software ...................................................................................... 383
  Shucai Xiao, Jung-Min "Jerry" Park, and Yanzhu Ye

PAIDS: A Proximity-Assisted Intrusion Detection System for Unidentified Worms ...................................................... 392
  Zhenyun Zhuang, Ying Li, and Zesheng Chen

A Multiple Secret Sharing Scheme based on Matrix Projection .............................................................................. 400
  Kai Wang, Xukai Zou, and Yan Sui

Security II (Intelligent Applications)

Exploring Security in PROFINET IO .......................................................................................................................... 406
  Johan Åkerberg and Mats Björkman

A Static Java Birthmark Based on Control Flow Edges .......................................................................................... 413
  Hyun-il Lim, Heewan Park, Seokwoo Choi, and Taisook Han

A Secure and Flexible Electronic-Ticket System .................................................................................................. 421
  M. Fahim Ferdous Khan, Yashiro Takeshi, Ito So, Masahiro Bessho, and Ken Sakamura

Software Architecture I (Software Architecture Development and Scheduling)

Towards a Well Structured and Dynamic Application Server .................................................................................. 427
  Chao You, Minghui Zhou, Zan Xiao, and Hong Mei

ProtoTalk: A Generative Software Engineering Framework for Prototyping Protocols in Smalltalk ................................................................................................................................. 435
  Ali Razavi and Kostas Kontogiannis

Usage History-Based Architectural Scheduling ...................................................................................................... 443
  Dongsun Kim, Seokhwan Kim, and Sooyong Park

Software Architecture II (Software Architecture Specification and Analysis)

Software Methodologies for the Engineering of Service-Oriented Industrial Automation: The Continuum Project .................................................................................................................... 452
  J. Marco Mendes, Axel Bepperling, João Pinto, Paulo Leitão, Francisco Restivo, and Armando W. Colombo

Towards a Next-Generation Matrix Library for Java .................................................................................................. 460
  Holger Arndt, Markus Bundschus, and Andreas Naegele

Towards Dynamic Component Updating: A Flexible and Lightweight Approach .................................................. 468
  Zan Xiao, Donggang Cao, Chao You, Minghui Zhou, and Hong Mei
Software Architecture III (Analysis of Software Updates)

Design of Service Component Layer in SOA Reference Architecture .......................................................... 474

Liang-Jie Zhang and Jia Zhang

The Design and Implementation of a Bare PC Email Server ............................................................................ 480

George H. Ford Jr., Ramesh K. Karne, Alexander L. Wijesinha, and Patrick Appiah-Kubi

Service Identification via Ontology Mapping .................................................................................................. 486

Feng Chen, Zhuopeng Zhang, Jianzhi Li, Jian Kang, and Hongji Yang

Mobile and Pervasive Computing I (RFID, Wireless Network and Services)

Towards Passive RFID Event .......................................................................................................................... 492

Wei Ye, Wen Zhao, Yu Huang, Wenhui Hu, Shikun Zhang, and Lifu Wang

Estimating Rate of Queue Usage to Differentiate Cause of Packet Loss in Multi-hop Wireless Networks ................................................. 500

Mi-Young Park, Sang-Hwa Chung, and Prasanthi Sreekumari

Deployment of Services Applications in Services Execution Environments .................................................... 509

Antonin Chazalet and Philippe Lalanda

Mobile and Pervasive Computing II (Software Testing and Re-engineering)

An Overlay-Based Resource Monitoring Scheme for Social Applications in MANET ........................................... 517

Kyungman Kwak, Gonzalo Huerta-Canepa, Yangwoo Ko, Dongman Lee, and Soon J. Hyun

More Tales of Clouds: Software Engineering Research Issues from the Cloud Application Perspective ...................................................... 525

Lijun Mei, Zhenyu Zhang, and W. K. Chan

Shift Hashing for Memory-Constrained Applications ...................................................................................... 531

Sushamna Deodhar and Alan L. Tharp

Transaction Level Control for Application Execution on the SegBus Platform .................................................... 537

Tiberiu Seceleanu, Ivica Crnkovic, and Cristina Seceleanu

Formal Methods (Formal Specification and Model Checking)

A Formal Descriptive Language and an Automated Detection Method for Complex Events in RFID ................................. 543

Jiaqi Zhu, Yu Huang, and Hanpin Wang

Translation-Based Model Checking for PLC Programs .................................................................................... 553

Min Zhou, Fei He, Ming Gu, and Xiaoyu Song

Modular Certification of Low-Level Intermediate Representation Programs .................................................. 563

Yuan Dong, Shengyuan Wang, Liwei Zhang, and Ping Yang
Best Practice

Integrating System Modeling with Project Management - A Case Study .................................................571
  Jonas Helming, Jörn David, Maximilian Koegel, and Helmut Naughton
Efficient Temporal Blocking for Stencil Computations by Multicore-Aware
Wavefront Parallelization ..........................................................................................................................579
  Gerhard Wellein, Georg Hager, Thomas Zeiser, Markus Wittmann,
  and Holger Fehske
Extensions for Integrated Queries on Heterogeneous Semantic Web
Resources .................................................................................................................................................587
  Cheng-Zen Yang, Ing-Xiang Chen, and Jia-Da Ye
Swarm Intelligence in the Fine-Tuning of Software Development Cost
Estimation Models ....................................................................................................................................593
  Tad Gonsalves, Kei Yamagishi, and Kiyoshi Itoh

Education and Learning (Domain Specific Software Architecture Design)

Temporally Robust Software Features for Authorship Attribution .............................................................599
  Steven Burrows, Alexandra L. Uitdenbogerd, and Andrew Turpin
An Augmented Social Interactive Learning Approach through Web2.0 ...................................................607
  Li Jin and Zhigang Wen
RHE: A Lightweight JVM Instructional Tool ..............................................................................................612
  Shaoshan Liu, Chengrui Deng, Xiao-Feng Li, and Jean-Luc Gaudiot

Fast Abstracts I (Formal Methods, Software Tools, Robotics)

The Java Data Mining Package - A Data Processing Library for Java .......................................................620
  Holger Arndt
Toward the Design of Robotic Software with Verifiable Safety .................................................................622
  Chih-Hong Cheng, Markus Rickert, Christian Buckl, Edward A. Lee, and Alois Knoll
A Systematic Robot Fault-Tolerance Approach .........................................................................................624
  Bingu Shim, Beomho Baek, and Sooyong Park
Generation of Pairwise Test Sets Using a Genetic Algorithm ......................................................................626
  James D. McCaffrey
An Ontology-Based Approach for GUI Testing ............................................................................................632
  Han Li, Feng Chen, Hongji Yang, He Guo, William Cheng-Chung Chu,
  and Yuansheng Yang
A Fine-Grained Privacy Structure for Service-Oriented Architecture .......................................................634
  David S. Allison, Hany F. El Yamany, and Miriam A. M. Capretz
Fast Abstracts II (Software Engineering, MDA)

A Multi-model Process Improvement Methodology Driven by Capability Profiles ............................................................636

Clenio F. Salviano

On Model Transformation Reuse .........................................................................................................................638

Xiao He, Zhiyi Ma, Yan Zhang, and Weizhong Shao

Requirement Risk Assessment Focused-On Stakeholder Risk Analysis ..........................................................640

Xiaohong Li and Qiang Liu

Industrial Opinion on the Effectiveness of Risk Management Methods ..........................................................642

Mira Kajko-Mattsson, Jan Lundholm, and Jonas Norrby

A Study of the Impact on Students Understanding Cross Cultural Differences in Software Engineering Work ..................................................................................................................644

Nancy R. Mead, Antonio Drommi, Dan Shoemaker, and Jeff Ingalsbe

Industrial Report: Data Reengineering of COBOL Sequential Legacy Systems ...........................................646

Richard Millham and Hongji Yang

Doctoral Symposium

Dihomotopic Reduction Used in Deadlock Detection .................................................................................648

David A. Cape and Bruce M. McMillin

Towards a Resource-Aware Component Model for Embedded Systems ...........................................................652

Aneta Vulgarakis

Efficient Management of Consistent Backups in a Distributed File System .........................................................656

Jan Stender

Model-Checking BNDC Properties in Cyber-Physical Systems ........................................................................660

Ravi Akella and Bruce M. McMillin

On Expressing Different Concurrency Paradigms on Virtual Execution Systems ........................................664

Cristian Dittamo

Jing Lin, Sahra Sedigh, and Ann Miller

Reliability Modeling for the Advanced Electric Power Grid: A Proposal for Doctoral Research ...........................672

Ayman Z. Faza, Sahra Sedigh, and Bruce M. McMillin

An Integrated Framework for Checking Concurrency-Related Programming Errors ........................................676

Qichang Chen and Liqiang Wang

Author Index - Main Conference .........................................................................................................................681
