COMPSAC Symposia

SETA: COMPSAC Symposium on Software Engineering Technology and Applications

Message from the SETA Organizing Committee

Doris Carver, W.K. Chan, Hongji Yang, Xiaodong Liu, Carl Chang, and Hridesh Rajan

Session 1: Static Analysis

Automatic Fix for C Integer Errors by Precision Improvement

Xi Cheng, Min Zhou, Xiaoyu Song, Ming Gu, and Jiaguang Sun

JRed: Program Customization and Bloatware Mitigation Based on Static Analysis

Yufei Jiang, Dinghao Wu, and Peng Liu

Condensing Class Diagrams With Minimal Manual Labeling Cost

Xinli Yang, David Lo, Xin Xia, and Jianling Sun
Session 2: Operation and Management
Reliability Analysis for Software Cluster Systems Based on Proportional Hazard Model ................................................................. 32
  Chunyan Hou, Chen Chen, Jinsong Wang, and Kai Shi
Determine Configuration Entry Correlations for Web Application Systems ........................................................................................................ 42
  Wei Chen, Heng Wu, Jun Wei, Hua Zhong, and Tao Huang
Anvaya: An Algorithm and Case-Study on Improving the Goodness of Software Process Models Generated by Mining Event-Log Data in Issue Tracking Systems .......................................................... 53
  Prerna Juneja, Divya Kundra, and Ashish Sureka

Session 3: Mining Software Repositories
GRETA: Graph-Based Tag Assignment for GitHub Repositories ................................................................................................................ 63
  Xuyang Cai, Jiangang Zhu, Beijun Shen, and Yuting Chen
It Takes Two to Tango: Deleted Stack Overflow Question Prediction with Text and Meta Features ........................................................................ 73
  Xin Xia, David Lo, Denzil Correa, Ashish Sureka, and Emad Shihab
Towards Correlating Search on Google and Asking on Stack Overflow ............................................................................................................. 83
  Chunyang Chen and Zhenchang Xing

Session 4: Prediction and Summarization
SatiIndicator: Leveraging User Reviews to Evaluate User Satisfaction of SourceForge Projects .................................................................................. 93
  Zhenzheng Qian, Beijun Shen, Wenkai Mo, and Yuting Chen
On Automatic Summarization of What and Why Information in Source Code Changes ................................................................................ 103
  Jinfeng Shen, Xiaobing Sun, Bin Li, Hui Yang, and Jiajun Hu
Software Defect Prediction Using Semi-Supervised Learning with Change Burst Information ............................................................................. 113
  Qing He, Beijun Shen, and Yuting Chen

Session 5: Vulnerability Detection and Test Oracle
An Effective Penetration Test Approach Based on Feature Matrix for Exposing SQL Injection Vulnerability ................................................................................................................................. 123
  Lei Liu, Jing Xu, Hongji Yang, Chenkai Guo, Jiehui Kang, Sihan Xu, Biao Zhang, and Guannan Si
Code Coverage-Based Failure Proximity without Test Oracles ......................................................................................................................... 133
  Jingxuan Tu, Xiaoyuan Xie, and Baowen Xu
Toward Exploiting Access Control Vulnerabilities within MongoDB Backend Web Applications .............................................................................. 143
  Shuo Wen, Yuan Xue, Jing Xu, Hongji Yang, Xiaohong Li, Wenli Song, and Guannan Si
Session 6: Testing and Fault Prediction

Investigating the Effects of Balanced Training and Testing Datasets on Effort-Aware Fault Prediction Models ........................................................................................................................................................................... 154

Kwabena Ebo Bennin, Jacky Keung, Akito Monden, Yasutaka Kamei, and Naoyasu Ubayashi

Improving Failure Detection by Automatically Generating Test Cases Near the Boundaries ........................................................................................................................................................................... 164

Min Zhou, Xi Cheng, Xinrui Guo, Ming Gu, Hongyu Zhang, and Xiaoyu Song

Prioritizing Interaction Test Suites Using Repeated Base Choice Coverage ........................................................................................................................................................................... 174

Rubing Huang, Weiwen Zong, Jinfu Chen, Dave Towey, Yunan Zhou, and Deng Chen

Session 7: Debugging

A Strategy to Determine When to Stop Using Automatic Bug Localization ........................................................................................................................................................................... 185

Zhendong Shi, Jacky Keung, Kwabena Ebo Bennin, Nachai Limsettho, and Qinbao Song

Exploring the Instability of Spectra Based Fault Localization Performance ........................................................................................................................................................................... 191

Yuanchi Guo, Xiaoyi Zhang, and Zheng Zheng

Automated Program Repair by Using Similar Code Containing Fix Ingredients ........................................................................................................................................................................... 197

Tao Ji, Liqian Chen, Xiaoguang Mao, and Xin Yi

Session 8: Formal Methods

Scope of Selection Nodes in Object Oriented Programs ........................................................................................................................................................................... 203

Hend Alrasheed and Austin Melton

Improved Co-Simulation with Event Detection for Stochastic Behaviors of CPSs ........................................................................................................................................................................... 209

Jufu Liu, Kaiqiang Jiang, Xiao Wang, Bei Cheng, and Dehui Du

LogOptPlus: Learning to Optimize Logging in Catch and If Programming Constructs ........................................................................................................................................................................... 215

Sangeeta Lal, Neetu Sardana, and Ashish Sureka

Modeling and Verifying HDFS Using CSP ........................................................................................................................................................................... 221

Wanling Xie, Huibiao Zhu, Xi Wu, Shuangqing Xiang, and Jian Guo

Session 9: Empirical Study

Automated Identification of High Impact Bug Reports Leveraging Imbalanced Learning Strategies ........................................................................................................................................................................... 227

Xinli Yang, David Lo, Qiao Huang, Xin Xia, and Jianling Sun

Situation-Oriented Requirements Elicitation ........................................................................................................................................................................... 233

Nimanthi L. Atukorala, Carl K. Chang, and Katsunori Oyama

DR_PSF: Enhancing Developer Recommendation by Leveraging Personalized Source-Code Files ........................................................................................................................................................................... 239

Hui Yang, Xiaobing Sun, Bin Li, and Yucong Duan

Modeling and Analyzing Cost and Utilization Based Task Scheduling for Cloud Application ........................................................................................................................................................................... 245

Guisheng Fan, Huiqun Yu, Liqiong Chen, and Dongmei Liu
Session 10: Exploratory Study
Human Subject Evaluation of Computer-Security Training Recommender .......................................................... 251
  Muhammad Nadeem, Byron J. Williams, Gary L. Bradshaw, and Edward B. Allen
A Preliminary Study Examining Relationships Between Nano-Patterns and Software Security Vulnerabilities .......................................................... 257
  Kazi Zakia Sultana, Ajay Deo, and Byron J. Williams

Session 11: Test Generation and Allocation
An Approach for Iteratively Generating Adequate Tests in Metamorphic Testing: A Case Study .......................................................... 263
  Junhua Ding and Dongmei Zhang
Apsaras: Efficient Allocation of Physical Devices for Android Testing .......................................................... 269
  Tianchi Liu, Chun Cao, Jie Chen, Ziling Lu, and Xiaoxing Ma
Improving Defect Detection Ability of Derived Test Cases Based on Mutated UML Activity Diagrams .......................................................... 275
  Haiying Sun, Mingsong Chen, Min Zhang, Jing Liu, and Ying Zhang

ECPE: COMPSAC Symposium on Embedded & Cyber-Physical Environments
Message from the ECPE Organizing Committee .................................................................................. 281
  Tiberiu Seceleanu, Tiziana Margaria, Rajesh Subramanayan, Michele Bugliesi,
  Cristina Seceleanu, and Bruce McMillin

ECPE Invited Talk
Designing [Secure] Complex Critical Public Infrastructure .................................................................................. 282
  Aditya P. Mathur

Session 1: Model-Driven Development
Generalized Attacker and Attack Models for Cyber Physical Systems .......................................................... 283
  Sridhar Adepu and Aditya Mathur
Model-Driven Optimization of Data-Adaptable Embedded Systems .......................................................... 293
  Adrian Lizarraga, Roman Lysecky, and Jonathan Sprinkle

Session 2: System Design and Tools
A One-Class NIDS for SDN-Based SCADA Systems .................................................................................. 303
  Eduardo Germano da Silva, Anderson Santos da Silva, Juliano Araujo Wickboldt,
  Paul Smith, Lisandro Zambenedetti Granville, and Alberto Schaeffer-Filho
A Comparative Study of the Effects of Pull Request on GitHub Projects .......................................................... 313
  Jing Liu, Jiahao Li, and Lulu He
Integrating Version Control in a Standardized Service-Oriented Tool Chain .......................................................... 323
  Luka Lednicki, Gaetana Sapienza, Morgan E. Johansson, Tiberiu Seceleanu,
  and Daniel Hallmans
Session 3: Specification and Verification
Verification of Reconfigurable NoC under Quality of Service Constraints .......................................................... 329
   Hela Ben Salah, Adel Benzina, and Mohamed Khalgui
Safety Requirements Specification and Verification for Railway Interlocking Systems ........................................... 335
   Li Han, Jing Liu, Tingliang Zhou, Junfeng Sun, and Xiaohong Chen

ITiP: COMPSAC Symposium on IT in Practice
Message from the ITiP Symposium Chairs ................................................................................................................. 341
   Maria R. Lee, San Murugesan, and Steve Diamond

ITiP Invited Talk
Data-Intensive Research & Scientific Discovery ........................................................................................................ 342
   Simon Y. Liu
How IT Leadership Will Change by 2020 and Why it Matters .................................................................................. 343
   Joseph Williams

Session 1: Healthcare Support Systems
A Healthcare Support System for Assisted Living Facilities: An IoT Solution .......................................................... 344
   Fulvio Corno, Luigi De Russis, and Alberto Monge Roffarello
A Case Study on SoaML to Design an Electronic Health Record Application Considering Integration of Legacy Systems ........................................................................................................ 353
   Joyce M. S. França, Josimar de S. Lima, and Michel S. Soares

Session 2: Internet of Things
Cyber Foraging and Offloading Framework for Internet of Things ............................................................................ 359
   Prithviraj Patil, Akram Hakiri, and Aniruddha Gokhale
Designing SSD-Friendly Applications for Better Application Performance and Higher IO Efficiency ................................................ ........................................................................................................ 369
   Zhenyun Zhuang, Sergiy Zhuk, Haricharan Ramachandra, and Badri Sridharan

Session 3: IT Service Applications
Probabilistic Sequence Modeling for Trustworthy IT Servicing by Collective Expert Networks .......................................................... 379
   Kayhan Moharreri, Jayashree Ramanathan, and Rajiv Ramnath
The Story of Naive Alice: Behavioral Analysis of Susceptible Internet Users .......................................................... 390
   Rasib Khan and Ragib Hasan
Mitigating an Oxymoron: Compliance in a DevOps Environments ............................................................................. 396
   John R. Michener and Aaron T. Clager
SEPT: COMPSAC Symposium on Security, Privacy and Trust in Computing

Message from the SEPT Organizing Committee ............................................................................................................. 399

*Bhavani Thuraisingham, Dianxiang Xu, Hiroki Takakura, Mohammad Zulkernine,*

and *Elisa Bertino*

SEPT Invited Talk

Data Security and Privacy: Concepts, Approaches, and Research Directions ................................................................. 400

*Elisa Bertino*

Session 1: Attack Protection

EmailProfiler: Spearphishing Filtering with Header and Stylometric Features of Emails ................................................................. 408

*Sevtap Duman, Kubra Kalkan-Cakmakci, Manuel Egele, William Robertson,* and *Engin Kirda*

How Secure is the Healthcare Network from Insider Attacks? An Audit Guideline for Vulnerability Analysis ............................................................................................................................................. 417

*Ragib Hasan, Shams Zawoad, Shahid Noor, Md. Munirul Haque,* and *Darrell Burke*

Session 2: Cloud Security

Chronos: Towards Securing System Time in the Cloud for Reliable Forensics Investigation ................................................................................................................................................................................................................. 423

*Shams Zawoad and Ragib Hasan*

Customized Cloud Service Trustworthiness Evaluation and Comparison Using Fuzzy Neural Networks ......................................................................................................................................................................................................... 433

*Zhengping Wu and Yu Zhou*

Interactive Incontestable Signature for Transactions Confirmation in Bitcoin Blockchain .................................................. 443

*Yan Zhu, Ruiqi Guo, Guohua Gan,* and *Wei-Tek Tsai*

Session 3: Mobile and Privacy

Maintaining User Interface Integrity on Android ......................................................................................................................... 449

*Abeer AlJarrah and Mohamed Shehab*

Design of a Concealed File System Adapted for Mobile Devices Based on GPS Information ......................................................................................................................................................................................................... 459

*Yong Jin, Masahiko Tomoishi,* and *Satoshi Matsuura*

An Advanced Collusion Attack against User Friendship Privacy in OSNs .................................................................................. 465

*Yuhong Liu and Na Li*

Session 4: Authentication and Access Control

Authenticating Multiple User-Defined Spatial Queries ............................................................................................................... 471

*Yong Wang, Shimeng Gao, Junhao Zhang, Xiao Nie,* Xiaoran Duan,* and *Juguang Chen*

Adaptive Reasoning for Context-Sensitive Access Controls ............................................................................................................... 481

*Sara Sartoli and Akbar Siami Namin*
User Identification of Pseudonyms without Identity Information Exposure in Access Federations ................................................................. 487
  Sato Hiroyuki, Okabe Yasuo, and Nakamura Motonori

**Doctoral Symposium**

Message from the Doctoral Symposium Co-Chairs .......................................................................................................................... 493
  Mohammad Adibuzzaman, Hiroyuki Ohsaki, Satish Puri, and Qinghua Lu

**Doctoral Symposium Session 1**

Performance Comparison of Shortest-Path Routing and Optimal Detour Routing in Content-Centric Networking ................................................................. 494
  Ryo Nakamura and Hiroyuki Ohsaki

Analysis of Message Delivery Delay in Geographic DTN Routing ......................................................................................................................... 496
  Daiki Matsui, Yasuhiro Yamasaki, and Hiroyuki Ohsaki

Adaptive Reasoning in the Presence of Imperfect Security Requirements ........................................................................................................... 498
  Sara Sartoli and Akbar Siami Namin

**Doctoral Symposium Session 2**

Mechanism Design for Replica Placement in Peer-Assisted Content Delivery Networks with Heterogeneous Behavior Models ................................................................. 500
  Minzhe Guo and Prabir Bhattacharya

Graph Based Agent Oriented Model for Tunnel Simulation ......................................................................................................................... 502
  Sanish Rai and Xiaolin Hu

A Text Information Retrieval Method by Integrating Global and Local Textual Information ........................................................................................................... 504
  Zhibo Wang and Yanqing Zhang

**HCSC: COMPSAC Symposium on Human and Social Computing**

Message from the HCSC Organizing Committee ................................................................................................................................. 506
  Yuhong Liu, Symeon (Akis) Papadopoulos, Rene Kaiser, and Moushumi Sharmin

**HCSC Invited Talk**

Opportunities and Challenges of Social Media in Personal and Societal Well-being ................................................................. 507
  Munmun De Choudhury

Detecting Weak Changes over a Network of Streaming Events ......................................................................................................................... 508
  Yao Xie

Can You Really Make Profit from Online Rating Manipulations?: An Empirical Study ........................................................................................................... 509
  Yuhong Liu and Wenqi Zhou

A Next Application Prediction Service Using the BaranC Framework ........................................................................................................... 519
  Mohammad Hashemi and John Herbert
Session 2: Data Mining and Community Detection
Community Detection in Large Social Networks Based on Relationship Density .................................................. 524  
  Xiang Li, Yong Tan, Ziyang Zhang, and Qiuli Tong

TAIN: COMPSAC Symposium on Technologies and Applications of the Internet
Message from the TAIN Program Co-chairs ........................................................................................................... 534  
  Tugkan Tuglular and Ying Cai

Session 1: Network Protocols and Applications
A Cross-Layer Multicast-Push Unicast-Pull (MPUP) Architecture for Reliable File-Stream Distribution .......................................................... 535  
  Shuoshuo Chen, Xiang Ji, Malathi Veeraraghavan, Steve Emmerson, Joseph Slezak, and Steven G. Decker
Communication and Security in Health Monitoring Systems — A Review ............................................................. 545  
  Hossein Fotouhi, Aida Caušević, Kristina Lundqvist, and Mats Björkman
An Assessment of Internet of Things Protocols for Resource-Constrained Applications ........................................... 555  
  Dae-Hyeok Mun, Minh Le Dinh, and Young-Woo Kwon

WEDA: COMPSAC Symposium on Web, Big Data & Analytics
Message from the WEDA 2016 Program Chairs ..................................................................................................... 561  
  Tugkan Tuglular, Ying Cai, Duygu Celik, Mei-Ling Shyu, and Tian Xia

WEDA Keynote
Big Graph Analytics: Models, Platforms and Optimizations .................................................................................... 562  
  Ling Liu

Session 1: Data Analytics
Big Holes in Big Data: A Monte Carlo Algorithm for Detecting Large Hyper-Rectangles in High Dimensional Data .................................................................................. 563  
  Joseph Lemley, Filip Jagodzinski, and Razvan Andonie

Session 2: Semantics Discovery and Management
Risk Assessment for a Global Air Transport System Using Socioeconomic-Technological-Environmental Databases ......................................................................................... 572  
  Aki-Hiro Sato and Hidefumi Sawai
SOLinker: Constructing Semantic Links between Tags and URLs on StackOverflow .................................................. 582  
  Wenkai Mo, Jiangang Zhu, Zhenzheng Qian, and Beijun Shen
Centrality and Cluster Analysis of Yelp Mutual Customer Business Graph ................................................................. 592  
  Brian McClanahan and Swapna S. Gokhale
Session 3: Big Data Applications
Causal Consistency for Distributed Data Stores and Applications as They are .........................................................602
Kazuyuki Shudo and Takashi Yaguchi
SpatialGraphx: A Distributed Graph Computing Framework for Spatial and Temporal Data at Scale .................................................................608
Changyuan Wang, Zongfei Lu, Yang Liu, Shanqing Guo, Xinshun Xu, Shijun Liu, and Lizhen Cui
Text Mining Analysis in Turkish Language Using Big Data Tools ..........................................................................................614
Mehmet Ulas Çakir and Seren Güldamlaslioglu
Using Object-Oriented Big Data Analytics to Reveal Server Performance Dead Zone .............................................619
Huihong He, Haibin Zhai, Qian Liu, and Yong Wang

Session 4: Semantics Discovery and Management
TripleFCA: FCA-Based Approach to Enhance Semantic Web Data Management ..........................................................625
Saleh Albahli and Austin Melton
Entity Type Recognition Using an Ensemble of Distributional Semantic Models to Enhance Query Understanding ...........................................................................631
Walid Shalaby, Khalifeh Al Jadda, Mohammed Korayem, and Trey Grainger

NATA: COMPSAC Symposium on Novel Applications and Technology Advances in Computing
Message from the NATA Organizing Committee ..................................................................................................................637
Ali Hurson, Ji-jiang Yang, Behrooz A. Shirazi, Alfredo Cuzzocrea, Toyokazu Akiyama, Sahra Sedigh Sarvestani, and Sheikh Iqbal Ahamed

Session 1: IoT Application and Middleware
Towards Dementia-Friendly Smart Homes ..........................................................................................................................638
Mohsen Amiribesheli and Abdelhamid Bouchachia
Building a Large-Scale Distributed Live Video Analysis System for Movement of Pedestrians in Urban Areas ............................................................................648
Yuuichi Teranishi and Nozomu Nishinaga
Temporal Dependency Rule Learning Based Group Activity Recognition in Smart Spaces ........................................................................................................658
Amine Lotfi Bourbia, Heesuk Son, Byoungheon Shin, Taehun Kim, Dongman Lee, and Soon J. Hyun

Session 2: Cloud Computing
Xiaomin Zhu, Yabing Zha, Ling Liu, and Peng Jiao
GPU-Aware Genetic Estimation of Hidden Markov Models for Workload Classification
Problems .................................................................674
Alfredo Cuzzocrea, Enzo Mumolo, Nicola Timeus, and Gianni Vercelli

Session 3: Software Security
Evaluating Security and Privacy in Cloud Services ..................................................683
Abdullah Abuhussein, Faisal Alsubaei, Sajjan Shiva, and Frederick T. Sheldon
Towards Realizing a Self-Protecting Healthcare Information System ..................................687
Qian Chen and Jonathan Lambright
Requirements are the New Code .................................................................................691
Daniel Conte de Leon and Sanjeev Shrestha

CELT: COMPSAC Symposium on Computing Education & Learning Technologies
Message from the CELT Organizing Committee ..........................................................695
Edmundo Tovar, Manuel Castro, Claudio Demartini, Tiziana Margaria, Henry Chan,
Timothy Shih, Simanta Mitra, and Sorel Reisman

Session 1: CS as a Lifelong Discovery
An Approach to Using Existing Online Education Tools to Support Practical Education on MOOCs .................................................................696
Yanchun Sun, Zijian Qiao, Dejian Chen, Chao Xin, and Wenpin Jiao
Academic Performance Prediction Using Chance Discovery from Online Discussion Forums .................................................................................................706
Gary K. W. Wong and Simon Y. K. Li
Stage-Based Generative Learning Object Model to Support Automatic Content Generation and Adaptation .................................................................712
Vytautas Štuikys, Renata Burbaite, Kristina Bespalova, Vida Drasute, Giedrius Ziberkas,
and Algimantas Venckauskas
Learning the Social Web: A Multidisciplinary Approach ..........................................................722
Luigi De Russis, Laura Farinetti, and Gabriella Taddeo

Session 2: CS and Learning Environments
Implementing an Open-Access, Data Science Programming Environment for Learners .................................................................728
Austin Cory Bart, Javier Tibau, Eli Tilevich, Clifford A. Shaffer, and Dennis Kafura
Supporting Learners in Online Courses Through Pair Programming and Live Coding .................................................................738
Seyedsoroush Ghorashi and Carlos Jensen
The Cost of Syntax and How to Avoid It: Text versus Frame-Based Editing .................................................................748
Amjad Altadmri, Michael Kölling, and Neil C. C. Brown
Session 3: Learning Outcomes and Assessment

A Cloud-Based Immersive Learning Environment for Distributed Systems Algorithms .......................................................754
Yogesh D. Barve, Prithviraj Patil, and Aniruddha Gokhale

Reasoning for CPS Education Using Surrogate Simulation Models .................................................................................................764
Shunxing Bao, Joe Porter, and Aniruddha Gokhale

Valentina Gatteschi, Fabrizio Lamberti, Gianluca Paravati, Alessandro Raso, and Claudio Demartini

Toward More Robust Automatic Analysis of Student Program Outputs for Assessment and Learning ..................................................................................................................780
Chung Keung Poon, Tak-Lam Wong, Y. T. Yu, Victor C. S. Lee, and Chung Man Tang

MOWU: COMPSAC Symposium on Mobile, Wearable and Ubiquitous Computing

Message from the MOWU Organizing Committee ..........................................................................................................................786
Morris Chang, Hong Va Leong, Paolo Bellavista, and Vladimir Getov

Session 1: Smartphone-based Localization

Self-Adaptive Step Counting on Smartphones under Unrestricted Stepping Modes .................................................................788
Zihao Tang, Yao Guo, and Xiangqun Chen

Your Walk is My Command: Gait Detection on Unconstrained Smartphone Using IoT System ................................................................................................................................................798
Akm Jahangir Alam Majumder, Piyush Saxena, and Sheikh Iqbal Ahamed

Session 2: Mobile Data and Cloud

Fusing Static and Roving Sensor Data for Detecting Highway Traffic Conditions in Real Time ..........................................................807
Beihong Jin, Yanling Cui, and Fusang Zhang

DPMS: A Swift Data Dissemination Protocol Based on Map Splitting .........................................................................................817
Sabri Allani, Taoufik Yeferny, Richard Chbeir, and Sadok Ben Yahia

A Cloud You Can Wear: Towards a Mobile and Wearable Personal Cloud ..........................................................................................823
Ragib Hasan and Rasib Khan

Author Index - Volume 1 ...............................................................................................................................................................829
