Message from the CPSBench 2018 General and TPC Chairs

Welcome to CPSBench! We have created the CPSBench workshop to provide a venue for researchers from academia and industry to share ideas on how to rigorously evaluate and compare cyber-physical networks and systems. The workshop is meant to be a venue for learning about each other’s challenges and evaluation methodologies and for debating future research. We will learn and be inspired from similar benchmarking efforts in related fields and also hope to create ideas that advance the state of experimentation in our field and beyond.

CPSBench 2018 has an exciting technical program including a keynote, two invited talks, and eight presentations accompanying accepted regular and invited papers. Each regular paper received between three and five reviews to ensure quality, scope, and potential for stimulating discussions at the workshop. We would like to thank all TPC members of CPSBench for their timely and thorough reviews, and for their constructive suggestions to the authors on how to improve the submissions or further develop the preliminary work presented.
