Welcome Message......................................................................................................................................xi
Message de Bienvenue.............................................................................................................................xiii
Conference Organization..........................................................................................................................xv
Program Committee..................................................................................................................................xvi
Reviewers....................................................................................................................................................xviii
Keynotes.....................................................................................................................................................xx
Symposium Talks.....................................................................................................................................xxii
Awards........................................................................................................................................................xxx
Conference Schedule.............................................................................................................................xxxii

Learning
Learning Neural Networks with Ranking-Based Losses for Action Retrieval ...............................................1
  Md. Atiqur Rahman and Yang Wang
Generalizing Generative Models: Application to Image Super-Resolution......................................................8
  Yanyan Mu, Roussos Dimitrakopoulos, and Frank Ferrie
Dense Image Labeling Using Deep Convolutional Neural Networks ..........................................................16
  Md. Amirul Islam, Neil Bruce, and Yang Wang

Keynote Presentations I
Real-Time Human Motion Capture with Multiple Depth Cameras .................................................................24
  Alireza Shafaei and James J. Little
Robust Non-saliency Guided Watermarking ....................................................................................................32
  Ahmed Gawish, Christian Scharfenberger, Hongbo Bi, Alex Wong,
  Paul Fieguth, and David Clausi
**Robotic Vision**

Sensor Planning for 3D Visual Search with Task Constraints ..........................................................37
  Amir Rasouli and John K. Tsotsos

Obstacle Detection for Image-Guided Surface Water Navigation ..........................................................45
  Tanmana Sadhu, Alexandra Branzan Albu, Maia Hoeberechts, Eduard Wisernig, and Brian Wyvill

Indoor Place Recognition System for Localization of Mobile Robots ...................................................53
  Raghavender Sahdev and John K. Tsotsos

**3D Vision**

Depth Texture Synthesis for Realistic Architectural Modeling .................................................................61
  Félix Labrie-Larrivée, Denis Laurendeau, and Jean-François Lalonde

Dense and Occlusion-Robust Multi-view Stereo for Unstructured Videos .............................................69
  Jian Wei, Benjamin Resch, and Hendrik P. A. Lensch

Aligning 3D Local Data of Leapfrog Locations along Elongated Structures ...........................................77
  Somayeh Hesabi and Denis Laurendeau

**Robotic Perception**

Modular Decomposition and Analysis of Registration Based Trackers ....................................................85
  Abhineet Singh, Ankush Roy, Xi Zhang, and Martin Jagersand

Light at the End of the Tunnel: High-Speed LiDAR-Based Train Localization in Challenging Underground Environments .................................................................93
  Tyler Daoust, François Pomerleau, and Timothy D. Barfoot

Subsea Fauna Enumeration Using Vision-Based Marine Robots .............................................................101
  Karim Koreitem, Yogesh Girdhar, Walter Cho, Hanumant Singh, Jesus Pineda, and Gregory Dudek

**New Applications**

Metric Feature Indexing for Interactive Multimedia Search ....................................................................109
  Ben Miller and Scott McCloskey

Video Object Segmentation for Content-Aware Video Compression .......................................................116
  Lu Sun, Marc Décombas, and Jochen Lang

Registration of Modern and Historic Imagery for Timescape Creation .................................................124
  Heider K. Ali and Anthony Whitehead
Keynote Presentations II

Automating Node Pruning for LiDAR-Based Topometric Maps in the Context of Teach-and-Repeat ................................................................. 132

David Landry and Philippe Giguère

Hierarchical Grouping Approach for Fast Approximate RGB-D Scene Flow .......................................................... 140

Francis Li, Alexander Wong, and John Zelek

Grasping

Hand-Object Interaction and Precise Localization in Transitive Action Recognition ................................................................. 148

Amir Rosenfeld and Shimon Ullman

Streaming Monte Carlo Pose Estimation for Autonomous Object Modeling .......................................................... 156

Christian Rink and Simon Kriegel

Practical Considerations of Uncalibrated Visual Servoing .......................................................... 164

Oscar A. Ramirez and Martin Jagersand

PhD Awards

Performance Assessment of Predictive Lane Boundary Detection for Non-uniformly Illuminated Roadway Driving Assistance .......................................................... 170

Avishek Parajuli, Mehmet Celenk, and H. Bryan Riley

Data-Driven Probabilistic Occlusion Mask to Promote Visual Tracking .......................................................... 178

Kourosh Meshgi, Shin-Ichi Maeda, Shigeyuki Oba, and Shin Ishii

Medical Imaging

A Comparative Study of Sparseness Measures for Segmenting Textures .......................................................... 186

Melissa Cote and Alexandra Branzan Albu

Image Restoration via Deep-Structured Stochastically Fully-Connected Conditional Random Fields (DSFCRFs) for Very Low-Light Conditions .......................................................... 194

Audrey G. Chung, Mohammad Javad Shafiee, and Alexander Wong

Time-Frequency Domain Analysis via Pulselets for Non-contact Heart Rate Estimation from Remotely Acquired Photoplethysmograms .......................................................... 201

Brendan Chwyl, Audrey G. Chung, Robert Amelard, Jason Deglint, David A. Clausi, and Alexander Wong
Human Robot Interaction
Integration of Uncertainty in the Analysis of Dyadic Human Activities ...........................................208
Maryam Ziaeefard and Robert Bergevin

Tiny People Finder: Long-Range Outdoor HRI by Periodicity Detection ..................................................216
Jake Bruce, Valiallah (Mani) Monajjemi, Jens Wawerla, and Richard Vaughan

Posters
Improving Random Forests by Correlation-Enhancing Projections and Sample-Based Sparse Discriminant Selection ..................................................................................................................222
Marcus Wallenberg and Per-Erik Forssén

Video-Rate Panorama for Free-Viewpoint TV ..........................................................................................228
Muhammad Usman Aziz and Pierre Boulanger

Towards Real-Time Detection, Tracking and Classification of Natural Video ........................................236
Laura Ray and Tianshun Miao

A Phase-Entrained Particle Filter for Audio-Locomotion Synchronization ..............................................242
Peyman Manikashani and Jeffrey E. Boyd

Recognizing People and Their Activities in Surveillance Video: Technology State of Readiness and Roadmap .................................................................................................................................250
Dmitry O. Gorodnichy, David Bissessar, Eric Granger, and Robert Laganière

Mobile-Target Tracking via Highly-Maneuverable VTOL UAVs with EO Vision .....................................260
Mohsen Majnoon, Kiarash Samsami, Mehran Mehrandezh, and Alex Ramirez-Serrano

Performance Evaluation of Bottom-Up Saliency Models for Object Proposal Generation ..................................................266
Anton Knaub, Vikram Narayan, and Markus Adameck

What is a Good Model for Depth from Defocus? ...........................................................................................273
Fahim Mannan and Michael S. Langer

Blur Calibration for Depth from Defocus .......................................................................................................281
Fahim Mannan and Michael S. Langer

Generation of Spatial-Temporal Panoramas with a Single Moving Camera ..............................................289
Xin Gao, Bingqing Yu, Liqiang Ding, and James J. Clark

TIGGER: A Texture-Illumination Guided Global Energy Response Model for Illumination Robust Object Saliency .................................................................................................................296
Sara Greenberg, Audrey G. Chung, Brendan Chwyl, and Alexander Wong

Computer Vision-Based Detection of Violent Individual Actions Witnessed by Crowds ...........................................303
Kawthar Moria, Alexandra Branzan Albu, and Kui Wu
Keypoint Recognition with Histograms of Normalized Colors .......................................................311
Clark F. Olson and Siqi Zhang

A Descriptor and Voting Scheme for Fast 3D Self-Localization in Man-Made Environments ..........................................................................................................................319
Marvin Gordon, Marcus Hebel, and Michael Arens

Fusing Iris, Palmprint and Fingerprint in a Multi-biometric Recognition System ..................................327
Habibeh Naderi, Behrouz Haji Soleimani, Stan Matwin, Babak Nadjar Araabi, and Hamid Soltanian-Zadeh

Human Action Recognition by Fusing the Outputs of Individual Classifiers .................................................335
E. Mohammadi, Q. M. Jonathan Wu, and M. Saif

Crack Detection in "As-Cast" Steel Using Laser Triangulation and Machine Learning ........................................................................................................342
J. Veitch-Michaelis, Y. Tao, D. Walton, J-P. Muller, B. Crutchley, J. Storey, C. Paterson, and A. Chown

Design of a Saccading and Accommodating Robot Vision System .........................................................350
Scott Huber, Ben Selby, and Bryan P. Tripp

Change Point Estimation of the Hippocampal Volumes in Alzheimer's Disease ..................................358
Xiaoying Tang, Marilyn Albert, Michael I. Miller, and Laurent Younes

Development of a New Dactylography and Writing Support System Especially for Blinds ........................................................362
Gourav Modanwal and Kishor Sarawadekar

Evaluation of Shape Description Metrics Applied to Human Silhouette Tracking ..................................370
Olivier St-Martin Cormier and Frank P. Ferrie

SmartTalk: A Learning-Based Framework for Natural Human-Robot Interaction ..................................376
Cameron Fabbri and Junaed Sattar

KinectScenes: Robust Real-Time RGB-D Fusion for Animal Behavioural Monitoring ..................................383
Logan Jeya and John Zelek

Synthetic Viewpoint Prediction ........................................................................................................391
Andy Hess, Nilanjan Ray, and Hong Zhang

Urban Safety Prediction Using Context and Object Information via Double-Column Convolutional Neural Network ............................................................................................................399
Hyeon-Woo Kang and Hang-Bong Kang

Growing Depth Image Superpixels for Foliage Modeling ...........................................................................406
Daniel Morris, Saif Imran, Jin Chen, and David Kramer

Reference Image Based Color Correction for Multi-camera Panoramic High Resolution Imaging ..........................................................410
Radhakrishna Dasari, Dong-Qing Zhang, and Chang Wen Chen
Multi-player Detection with Articulated Mixtures-of-Parts Representation
Constrained by Global Appearance ....................................................................................416
  YANG FANG, SHI LONG WEI, AND JO GEUN SIK

Road Segmentation in Street View Images Using Texture Information ........................................424
  DAVID ABOU CHACRA AND JOHN ZELEK

Point Pair Feature Based Object Detection for Random Bin Picking ........................................432
  WIM ABBELOOS AND TOON GOEDEMÉ

Anisotropic Interpolation of Sparse Images ........................................................................440
  AMIR ABBAS HAJI ABOHHASSANI, ROUSSOS DIMITRAKOPoulos, AND FRANK P. FERRIE

Efficient Terrain Driven Coral Coverage Using Gaussian Processes for Mosaic Synthesis .................................................................448
  SANDEEP MANJANNA, NIHIL KAKODKAR, MALIKA MEGHJANI, AND GREGORY DUDEK

Texture-Aware SLAM Using Stereo Imagery and Inertial Information ...................................456
  TRAVIS MANDESON, FLORIAN SHKURT, AND GREGORY DUDEK

Author Index ................................................................................................................................464
