Keynote Addresses - Volume 1 ...................................................................................................... xxxi

Numerical Algorithm and Analysis

A Sufficiency and Necessity Condition on Convergence of Ishikawa Iterative Process for Asymptotically Pseudocontractive Mapping .......................................................... 3
  Hongshan Du and Guanglan Wang
The TSVD Method for Numerical Differentiation of 2D Functions ............................................... 7
  Zhenyu Zhao and Chuan Yue
Numerical Methods for Solving Energy Equations of Dilatant Fluid Flow ...........................................11
   Botong Li, Liancun Zheng, and Xinxin Zhang
A New Passive Sonar Bearing Estimation Algorithm Combined with Blind Source Separation .................................................................15
   Wentao Fan, Xinhua Zhang, and Biao Jiang
Data Fusion Algorithm for Measurement of Multiple Equipments on Maritime Mobile Tracking Stations ....................................................................................19
   Xiaoyong Li, Zhonghua Zhang, Lei Yang, Guiming Chen, and Jumbo Zhu
Crashworthiness Design of Frontal Rail Using Strain-Energy-Density and Topology Optimization Approach ..........................................................................24
   Tao Xu, Yiwen Li, Qiang Li, Liang Hao, and Wenjun Song
Interpolation and Numerical Integration of the Septuple Supported Spline Wavelet ...........................................................................................................29
   Zhongshe Gao and Yonghong Shen
Stochastic Vehicle Routing Problem with Uncertain Demand and Travel Time and Simultaneous Pickups and Deliveries ...........................................................32
   Lingjuan Hou and Hong Zhou
Study on Weight Function of Meshless Method Based on B-spline Wavelet Function ........................................................................................................36
   Tao Xu, Peng Zou, Tianhuang Xu, and Chenmeng Jiye
Meshless Virtual Boundary Least-Square Collocation Method for 2-D Elastic Problems ........................................................................................................41
   Zhijia Zhang and Qiang Xu
A Self-Adaptive Trust Region Algorithm with Line Search Technique .........................................................................................................................46
   Wenjuan Wu, Lanping Chen, and Baocong Jiao
Foreign Currency Option Pricing with Both Fixed and Proportional Transaction Costs ........................................................................................................52
   Wenli Huang and Shonghong Li
A Comparative Study of the DGTD Algorithm and the FVTD Algorithm in Computational Electromagnetics ........................................................................56
   Cong Deng, Wenlu Yin, Shunlian Chai, and Junjie Mao
On the Analysis of Performance of the Artificial Tribe Algorithm .........................................................................................................................60
   Tanggong Chen, Xiaowei Wei, Wenhui Jia, and Zhi Liu
An Exact Fast Algorithm for Minimum Hitting Set .........................................................................................64
   Lei Shi and Xuan Cai
Dynamic Analysis of Tall-Pier Aqueduct Using ODE Solver ........................................................................68
   Shaowei Hu, Ri You, Zhiguo Niu, and Jun Lu
General Solution of Queueing Model with Batch Renewal Arrival by Two Approaches ...............................................................73
   Wei Li, Rod J. Fretwell, and Demetres D. Kouvatsos
An Improved Method for Depicting Workspace Boundary of Planar Robot
Manipulator .......................................................................................................................... 77
Yi Cao and Huanfeng Li

Computational Simulation and Analysis
Denoising Mutation of FPRGA Based on Wavelet Decomposition ................................... 81
Mingyi Cui and Wei Cui
A Fuzzy Method for Signal Smoothing .................................................................................. 85
Wenjing Yang and Yuanguo Zhu
SSCM-Based Simulation of Stock Market: Put Bounded Rational into Social
and Stock Environment ........................................................................................................ 90
Nan Lin, Xiaochao Ding, and Zheng Qin
Analysis of Transient Electromagnetic Field Coupling to Shielded
Twisted-Pairs .......................................................................................................................... 95
Chao Liu, Lixin Wang, and Gang Zhang
Nonlinear Numerical Simulation to Thermo-elastic-plastic Creep Constitutive
Equation for Concrete Subjected to Fire ................................................................................ 99
Zhenqing Wang, Dalei Zhu, Mu Qiao, and Yulai Han
CFD Simulation on Dense Gas-Solid Flow for Blast Furnace Slag Waste Heat
Recovery .................................................................................................................................. 103
Fang Liu, Jianxiang Guo, Baojin Yang, and Chang Liu
Dynamic Relocating Vehicle Resources Using a Microscopic Traffic
Simulation Model for Carsharing Services ............................................................................ 108
Hao Wang, Ruey (Kelvin) Cheu, and Der-Horng Lee
Fuzzy Fatigue Reliability Analysis for a Landing Gear Structure ....................................... 112
Hong Wang, Caijun Xue, and WenTao Jiang
Framework for Simulation of Quantized Virtual Society Based on Semantic
P2P Network ........................................................................................................................... 116
Lican Huang

Hybrid and Combined Computational Methods
Application of Bayesian Network Knowledge Reasoning Based on CBR
in ITS ......................................................................................................................................... 123
Jihong Ding, Huazhong Liu, and Anyuan Deng
Amoeba-Based Knowledge Discovery System ..................................................................... 128
Toshinori Munakata, Masashi Aono, and Masahiko Hara
A Nonmonotone Conjugate Gradient Method for Nonlinear Optimization ....................... 132
Ying Song and Liying Liu
Retail Location Decision-Making Based on the Combination of AHP
and Entropy Weight ............................................................................................................... 136
Tao Li and Lian She

A Two-Parameter Family of Combined Iterative Methods for Solving Nonlinear Equations ................................................................. 209
Xueliang Zheng and Shuping Chen

On the Max-geometric Mean Powers of a Fuzzy Matrix ................................................................. 213
Chia-Cheng Liu, Yung-Yih Lur, and Yan-Kuen Wu

A New Two Level Difference Scheme for Solving One-Dimensional Second-Order Hyperbolic Equations ................................................. 218
Tang-Wei Liu, Li-Bin Liu, He-Hua Xu, and Li-Hua Le

A Fast Fingerprint Image Enhancement Method ................................................................. 222
Keming Mao, Zhiliang Zhu, and Huiyan Jiang

Computational Biology

Support Vector Machine Methods for the Prediction of Cancer Growth .............................................. 229
Xi Chen, Wai-Ki Ching, Kiyoko F. Aoki-Kinoshita, and Koh Furuta

Missing Data Analysis of St. Louis Risk Research Data ................................................................. 233
Xue Zhao

A Clustering System for Gene Expression Data Based upon Genetic Programming and the HS-Model ................................................................. 238
Guiquan Liu, Xiufang Jiang, and Lingyun Wen

Meta-analysis and Network Analysis of Five Ovarian Cancer Gene Expression Dataset ................................................................. 242
Hua Dong, Shengjun Hong, Xiaomin Xu, Yanghua Xiao, Li Jin, and Momiao Xiong

Computational Graphics

A New Contour Tracing Algorithm in Eight-Connected Binary Images .............................................. 249
Ding Sun and Yan Liu

Representing Railway Wheel Profile Using Quadratic NURBS ................................................................. 254
Xiaofang Liu, Qingfu He, and Yongjun Liu

Computational Engineering

Numerical Analysis on Chaotic Performance of Concrete Material Using Nonlinear Dynamical Equation ................................................................. 261
Ning Liu

Control Strategy for Four-Wheel Steering Vehicle Handling Stability Based on Partial Decoupling Design ................................................................. 265
Bin Yang, Maosong Wan, and Qinghong Sun

The Secondary Flow of the Flow of the Second-Order Fluid having Variable Coefficients in Annulus with the Inner Cylinder Executing a Planetary Motion ................................................................. 268
Shuyun Zhang and Haiqing Cui

A Lightweight Currency-Based P2P VoD Incentive Mechanism ................................................................. 272
Chi Wang, Hongbo Wang, Yu Lin, and Shanzhi Chen
# Computational Intelligence

Adaptive Time-Frequency Parameterization of Frequency-Hopping Signals Based on Evolutionary Algorithm ................................................................. 279
    Jian Tao Guo

Dynamic Parameter Selection Based on Trigonometric Function in Particle Swarm Optimization ................................................................. 283
    Wen Xue Zhang, Tie Ke Li, and Can Tao Shi

Swarm Intelligence Algorithm Based on Orthogonal Optimization ................................................................. 287
    Yong Xian Li and Jia Zhong Li

Robust Sensor Placement Problem in Municipal Water Networks ................................................................. 291
    Xin Ma, Yuan Tao Song, Jun Huang, and Jun Wu

Biogeography-Based Optimization for the Traveling Salesman Problems ................................................................. 295
    Ying Song, Min Liu, and Zheng Wang

A Note on Synchronization Steps in Firing Squad Synchronization Problem ................................................................. 300
    Akira Nomura, Jean-Baptiste Yunès, and Hiroshi Umeo

Asymmetric Verification of Business Cycle by Forecasting Turning Points Based on Neural Networks ................................................................. 302
    Dabin Zhang and Haibin Xie

# Computational Statistics and Computational Mechanics

Nonparametric Methods and Weekend Effect: New Evidence from the Shanghai Stock Market ................................................................. 309
    Jin Cheng He and Ling Xiao Tang

The Impact of Memory on Travelers’ Behaviour and the Evolution of Transportation System ................................................................. 313
    Wen Xiang Wu

Convexity and Optimization of Set-Valued Mapping in Vector Space ................................................................. 317
    Xiu Hong Liu

A New Static Reanalysis Method of Topological Modifications with Added Degrees of Freedom ................................................................. 321
    Tao Xu, Huen Wai Kai, Fei Cheng, Guikai Guo, and Tatsuo Yoshino

# Scientific and Engineering Computing

The Reliability Analysis of Reinforced Concrete Beams under High Temperature ................................................................. 327
    Zhen Qing Wang, Mu Qiao, Dai Lei Zhu, and Yulai Han

A New Method for Computing Contact Angle of High Speed Ball Bearing ................................................................. 331
    Chun Li Lei, Zhi Yuan Rui, Jun Liu, Ru Cheng Feng, and Jun Tian Zhao
Experimental and Numerical Analyses of Electromagnetic Attenuation Properties of an L-Shaped Channel Constructed by Electromagnetic Absorbing Concrete ................................................................. 335
   Liuhong Huang and Shijing Ding

Homotopy Method for a Class of Fixed-Point Problems ........................................ 339
   Jiawei Tan, Jia Chen, and Qinghuai Liu

Workflow-Based High Performance Data Transfer and Ingestion to Support Petascale Simulations on TeraGrid ................................................................................................................... 343
   Jun Zhou, Yifeng Cui, Sashka Davis, Clark C. Guest, and Philip Maechling

Seesaw: Performance Guarantee for RAID Reconstruction .................................. 348
   Junping Liu, Ke Zhou, Zhikun Wang, Liping Pang, and Dan Feng

Parallel and Distributed Computing

An Effective Technique to Reduce Querying Routing Table for Mesh-based Network-on-Chip ......................................................................................................................... 355
   Minghua Tang and Xiaola Lin

An Algorithm for Assigning Tasks in Parallel Computing ................................... 360
   Yang Rui and Zhang Xinyu

Transactional Memory Consistency: A New Consistency Model for Distributed Transactional Memory .................................................................................................................. 364
   Xuping Tu, Xuepeng Fan, Hai Jin, Long Zheng, and Xin Peng

A Dynamic Adjustment Mechanism with Heuristic for Thread Pool in Middleware ...................................................................................................................... 369
   Ning-jiang Chen and Pan Lin

Parallel Viewshed Analysis on GPU Using CUDA ................................................. 373
   Yingjie Xia, Yang Li, and Xingmin Shi

Cluster Computing and Internet Computing

Proactive Failure Management for High Availability Computing in Computer Clusters ......................................................................................................................... 377
   Ziming Zhang and Song Fu

Compression of Inverted Index for Comprehensive Performance Evaluation in Lucene .................................................................................................................. 382
   Xianghua Xu, Shengyi Pan, and Jian Wan

Item Type Based Collaborative Algorithm ............................................................. 387
   Zhengwu Wang, Xinwei Wang, and Haifeng Qian

A Secure Virtual Verification Model for Wireless Sensor Network .................. 391
   Yang Li, Yingjie Xia, and Guo-hua Zhan
Granular Computing and Soft Computing

A Binary Particle Swarm Optimization for Structural Topology Optimization .................................................. 395
Guan-Chun Luh and Chun-Yi Lin

A Novel Clone Selection Algorithm and its Application for Three Dimension
Bin Packing Problem of Web Mode ................................................................. 400
Jian-hua Li, Hui Chen, and Lina Ren

Improved Particle Swarm Optimization Algorithm Based on Random
Perturbations ........................................................................................................ 404
Xiao Xiao, Congli Mei, and Guohai Liu

Solving Facility Layout Problem via Particle Swarm Optimization ......................................................... 409
Shunichi Ohmori, Kazuho Yoshimoto, and Kenshu Ogawa

Kernel-Based Computing and SVM

Grid Resources Prediction with Support Vector Regression and Particle
Swarm Optimization .......................................................................................... 417
Guosheng Hu, Liang Hu, Hongwei Li, Kun Li, and Wei Liu

Morphological Component Analysis Based Hybrid Approach for Prediction
of Crude Oil Price ............................................................................................ 423
Kaijian He, Kin Keung Lai, and Jerome Yen

Neural Computing and Social Computing

Development of Repetitively Enhanced Neural Networks (RENN)
for Efficient Missile Design and Optimization .................................................... 431
Nhu-Van Nguyen, Kwon-Su Jeon, Jae-Woo Lee, and Yung-Hwan Byun

A Fast Algorithm for Finding Community Structure Based on Community
Closeness ............................................................................................................ 436
Xiufang Jiang, Guiquan Liu, and Zhiting Lin

Improved BM Pattern Matching Algorithm for Intrusion Detection ................. 440
Qingzhang Chen, Yibo Niu, Zhehu Wang, and Feng Du

Data Mining and KDD

A Fast Bidirectional Method for Mining Maximal Frequent Itemsets ...................... 447
Chao Wang, Zhi-wei Ni, and Jun-fen Guo

Relief Demand Forecasting in Emergency Logistics Based on Tolerance
Model ............................................................................................................... 451
Zhi-Hua Hu

Data-Adaptive Clustering Analysis for Online Botnet Detection .......................... 456
Xiaocong Yu, Xiaomei Dong, Ge Yu, Yuhai Qin, and Dejun Yue

Language Detection with GMM Optimization Using Neural Networks ............... 461
Ali Shadmand and Khalil Monfaredi
### A k-Means-Based Projected Clustering Algorithm

*Yufen Sun, Gang Liu, and Kun Xu*

---

### Signal and Image Processing

A PET Bottle Mouth Detection Method Based on Morphologic

*Zhenhan Lv, Liqun Lin, Taisong Jin, and Yuan Li*

A New Image Segmentation Method Based on Grey Graph Cut

*Miao Ma, Jiao He, Hualei Guo, and Hongpeng Tian*

The Research of Pulse Wave Signal Denosing Based on EMD and ICA

*Yingying Zheng, Yongliang Zhang, and Yanli Liu*

The Projective Invariants of Six 3D Points from Three 2D Uncalibrated Images

*Yuanbin Wang, Bin Zhang, and Fenghua Hou*

Perceived Depth Assessment from Noised Stereo Images

*Chaohui Lü, Lili Xu, Hui Wang, and Hui Ren*

---

### Heuristic and Meta-Heuristic Methods

Hybrid Heuristics for Vehicle Routing Problem with Fuzzy Demands

*Changshi Liu and Fuhua Huang*

An Effective Method for Complete Visual Coverage Path Planning

*Jie Li, Changwen Zheng, and Xiaohui Hu*

Engineering Optimization Using Modified Binary Differential Evolution

*Chun-Yin Wu and Ko-Ying Tseng*

---

### Economics and Finance Modeling

Assessing the Internal Fraud Risk of Chinese Commercial Banks

*Lijun Gao and Linjie Sun*

A Weak-Form Efficiency Testing of China’s Stock Markets

*Xianming Wen, Kexi Li, and Lin Liang*

Analysis on the Volatility of SHIBOR

*Qi Yang and Xiaofeng Zhang*

A Method for Price Limits Setting in Futures Market

*Yong Xue, Ju-e Guo, and Dong Xue*

An Investment Decision-Making Research Based on Mothballing Option

*Bo Gao, Ju-e Guo, and Guoxing Zhang*

Risk Analysis with Investment in Uncertain Environments

*Qingfeng Song, Wansheng Tang, and Ruiqing Zhao*

Reset Put Option Pricing with Transaction Costs

*Jiangang Shen, Chuan Qin, Zhe Chen, and Shenghong Li*

---
