# Table of Contents

Workshop on Computer Vision Applications for the Visually Impaired

**SESSION 1: Travel and Wayfinding Part I**

Localization Based on Building Recognition .................................................................
   *W. Zhang and J. Košecká*

Bipolarity- and Projective Invariant-Based Zebra-Crossing Detection for the Visually Impaired........
   *M. Uddin and T. Shioyama*

First Steps towards Stereo-Based 6DOF SLAM for the Visually Impaired
   *J. Sáez, F. Escolano, and A. Peñalver*

**SESSION 2: Visual, Audio and Tactile Interfaces**

Big Little Icons ...........................................................................................................
   *V. Rabaud and S. Belongie*

A Visibility Improvement System for Low Vision Drivers by Nonlinear Enhancement of Fused Visible and Infrared Video .................................................................
   *H. Ngo, L. Tao, M. Zhang, A. Livingston, and V. Asari*

**SESSION 3: Information Access**

Sign Classification Using Local and Meta-Features.........................................................
   *M. Mattar, A. Hanson, and E. Learned-Miller*

Automatic Sign Detection and Recognition in Natural Scenes ...........................................
   *P. Silapachote, J. Weinman, A. Hanson, R. Weiss, and M. Mattar*

A Time-Efficient Cascade for Real-Time Object Detection: With Applications for the Visually Impaired...........................
   *X. Chen and A. Yuille*

**SESSION 4: Travel and Wayfinding Part II**

Badge3D for Visually Impaired .........................................................................................
   *G. Iannizzotto, C. Costanzo, P. Lanzafame, and F. La Rosa*

Digital Sign System for Indoor Wayfinding for the Visually Impaired
   *B. Tjan, P. Beckmann, R. Roy, N. Giudice, and G. Legge*

**SESSION 5: Special Topics**

A Multi-Camera Pose Tracker for Assisting the Visually Impaired
   *F. Dellaert and S. Tariq*

Mobility Assessment Using Simulated Artificial Human Vision
   *J. Dowling, W. Boles, and A. Maeder*
