DCC 2001

This book contains the presentations from the Data Compression Conference held March 27-29, 2001, in Snowbird, Utah. The conference was sponsored by Brandeis University in cooperation with the IEEE Computer Society Technical Committee on Computer Communications (TCCC).

GENERAL CHAIR: James A. Storer – Brandeis University
PROGRAM CHAIR: Martin Cohn – Brandeis University

PROGRAM COMMITTEE

Alberto Apostolico – Purdue University and Università di Padova
Ronald B. Arps – IBM
Bruno Carpentieri – University of Salerno
Phillip Chou – Microsoft
Michelle Effros – California Institute of Technology
Hamid Jafarkhani – Broadcom
Jelena Kovacevic – Bell Laboratories
Richard E. Ladner – University of Washington
Michael W. Marcellin – University of Arizona
Alistair Moffat – University of Melbourne
David L. Neuhoff – University of Michigan
Majid Rabbani – Kodak
Kannan Ramchandran – University of Illinois
Eve A. Riskin – University of Washington
Serap Savari – Bell Labs/Lucent
Gadiel Seroussi – HP Labs
John D. Villasenor – University of California, Los Angeles
Ian H. Witten – University of Waikato
Kenneth Zeger – University of California, San Diego

ACKNOWLEDGEMENTS

The program committee gratefully acknowledges the support of the Computer Science Department of Brandeis University. In particular, we thank Myrna Fox and Diane Hayes for their efforts in the administration of the conference. We also thank Danielle Young of the IEEE Computer Society Press for supervising the production of these proceedings.
The Capocelli Prize

is awarded annually for a student-authored DCC paper; in memory of our friend and colleague Renato M. Capocelli, May 3, 1940 — April 8, 1992.

Previous winners:

1997 — Matthias Ruhl and Hannes Hartenstein, Institut für Informatik, Universität Freiburg, “Optimal Fractal Coding is NP-Hard”

1996 — Earl Levine, Department of Electrical Engineering, Stanford University, “Stochastic Vector Quantization, and Stochastic VQ with State Feedback Using Neural Networks”

1995 — Suzanne Bunton, Department of Computer Science and Engineering, University of Washington, Seattle, “The Structure of DMC”

Contents

Technical Sessions

Session 1

On Zador's Entropy-Constrained Quantization Theorem ........................................ 3
  R.M. Gray and J. Li'
  Stanford University, The Pennsylvania State University
Network Vector Quantization .................................................................................. 13
  M. Fleming and M. Effros
  California Institute of Technology
Design of Tree-Structured Multiple Description Vector Quantizers ..................... 23
  J. Cardinal
  Université libre de Bruxelles
Robust Predictive Vector Quantizer Design ...................................................... 33
  H. Khalil and K. Rose
  University of California at Santa Barbara
Asymptotically Optimal Scalable Coding for Minimum Weighted Mean Square Error ................................................................. 43
  A. Aggarwal, S.L. Regunathan, and K. Rose
  University of California at Santa Barbara
Lossless Image Data Sequence Compression Using Optimal Context Quantization 53
  S. Forchhammer, X. Wu, and J.D. Andersen
  Technical University of Denmark, 'University of Western Ontario

Session 2

Enhancing Analog Image Transmission Systems Using Digital Side Information: A New Wavelet-Based Image Coding Paradigm ........................................ 63
  S.S. Pradhan and K. Ramchandran
  University of California at Berkeley
Group Testing for Wavelet Packet Image Compression ....................................... 73
  E.S. Hong, R.E. Ladner, and E.A. Riskin
  University of Washington
Embedded Image Coding Using ZeroBlocks of Subband/Wavelet Coefficients and Context Modeling .......................................................... 83
  S.-T. Hsiang
  Rensselaer Polytechnic Institute
A Wavelet Coder for Masked Images ................................................................. 93
  P.Y. Simard and H.S. Malvar
  Microsoft Research
Feature-Preserving Image Coding for Very Low Bit Rates........................................ 103
  D. Schilling and P. Cosman
  University of California at San Diego
Video Residual Coding Using SPIHT and Dependent Optimization .................... 113
  K.K. Lin and R.M. Gray
  Stanford University
Rate-Distortion Optimization for the SPIHT Encoder ......................................... 123
  K.K. Lin and R.M. Gray
  Stanford University

Session 3

Length-Restricted Coding in Static and Dynamic Frameworks .......................... 133
  M. Liddell and A. Moffat
  The University of Melbourne
Optimal Prefix-Free Codes That End in a Specified Pattern and Similar Problems: The Uniform Probability Case ............................................ 143
  M.J. Golin and H.-S. Na
  Hong Kong University of Science and Technology, Postech
Combining PPM Models Using a Text Mining Approach ................................. 153
  W.J. Teahan and D.J. Harper
  The Robert Gordon University
Compressing XML with Multiplexed Hierarchical PPM Models .......................... 163
  J. Cheney
  Cornell University

Session 4

Quantized Oversampled Filter Banks with Erasures ..................................... 173
  P.L. Dragotti, J. Kovacevic', and V.K. Goyal'
  Swiss Federal Institute of Technology, Bell Labs, Lucent Technologies
Semidefinite Programs for the Design of Codes for Delay-Constrained Communication in Networks .................................................. 183
  F.E. Oggier and S.D. Servetto'
  Université de Genève, École Polytechnique Fédérale de Lausanne
Construction of Low Complexity Regular Quantizers for Overcomplete Expansions in $\mathbb{R}^n$ ................................................ 193
  B. Beferull-Lozano and A. Ortega
  University of Southern California

Session 5

Towards Compressing Web Graphs .............................................................. 203
  M. Adler and M. Mitzenmacher'
  University of Massachusetts, Harvard University
Compressing the Graph Structure of the Web .............................................. 213
  T. Sue1 and J. Yuan
  Polytechnic University
Streaming Thin Client Compression

B. O. Christiansen, K. E. Schauser, and M. Munke
University of California at Santa Barbara

Software Compression in the Client/Server Environment

M. Factor, D. Sheinwald, and B.-A. Yassour
IBM Research

Tag Insertion Complexity

S. Yeates, I. H. Witten, and D. Bainbridge
University of Waikato

Fast Adaptive Encoder for Bi-Level Images

H. S. Malvar
Microsoft Research

Session 6

Optimal Code Design for Lossless and Near Lossless Source Coding in Multiple Access Networks

Q. Zhao and M. Effros
California Institute of Technology

On Variable Length Codes for Iterative Source/Channel Decoding

R. Bauer and J. Hagenauer
Munich University of Technology

Joint Source-Channel Decoding of Correlated Sources over Noisy Channels

J. Garcia-Frias
University of Delaware

Successive Refinement on Trees: A Special Case of a New MD Coding Region

R. Venkataramani, G. Kramer, and V. K. Goyal
University of Illinois at Urbana-Champaign, Bell Labs, Lucent Technologies

Joint Source Channel Coding Using Arithmetic Codes and Trellis Coded Modulation

C. Demiroglu, M. W. Hoffman, and K. Sayood
University of Nebraska-Lincoln

Low Delay Perpetually Lossless Coding of Audio Signals

S. Dorward, D. Huang, S. A. Savari, G. Schuller, and B. Yu
Bell Labs, Lucent Technologies, University of California at Berkeley

Session 7

Enhancing Image Coders by Using Spatial Noise Shaping (SNS)

S.-S. Kuo and J. D. Johnston
AT&T Labs-Research

Compression of the Layered Depth Image

J. Duan and J. Li
Tsinghua University, Microsoft Research China

Multihypothesis Motion Estimation for Video Coding

M. Flierl and B. Girod
University of Erlangen-Nuremberg, Stanford University
Managing Drift in DCT-Based Scalable Video Coding................................. 351
A.R. Reibman and L. Bottou
AT&T Labs - Research

Session 8

Design of Trellis Codes for Source Coding with Side Information at the Decoder......................................................... 361
X. Wang and M.T. Orchard
Princeton University
Universal Lossless Compression of Piecewise Stationary Slowly Varying Sources...................................................... 371
G.I. Shamir and D.J. Costello, Jr.
University of Notre Dame
The Coding-Optimal Transform................................................................. 381
C. Archer and T.K. Leen
Oregon Graduate Institute of Science and Technology
An Adaptable Binary Entropy Coder.......................................................... 391
A. Kiely and M. Klimesh
NASA Jet Propulsion Laboratory
Overlap in Adaptive Vector Quantization.................................................. 401
F. Rizzo and J.A. Storer
Brandeis University
On the Hardness of Finding Optimal Multiple Preset Dictionaries ............... 411
M. Mitzenmacher
Harvard University

Session 9

Can We Do without Ranks in Burrows Wheeler Transform Compression?........ 419
A.I. Wirth and A. Moffat
The University of Melbourne
Parsing Strategies for BWT Compression.................................................. 429
R.Y.K. Isal and A. Moffat
The University of Melbourne
Space-Time Tradeoffs in the Inverse B-W Transform.................................. 439
J. Seward
Microsoft Research
Pattern Matching in Huffman Encoded Texts............................................. 449
S.T. Klein" and D. Shapira'  
'Bar Ilan University, 'Jordan Valley College
Faster Approximate String Matching over Compressed Text....................... 459
G. Navarro, T. Kida', M. Takeda', A. Shinohara', and S. Arikawa'  
University of Chile, 'Kyushu University
Compressed Pattern Matching for SEQUITUR............................................ 469
S. Mitarai, M. Hiroe, T. Matsumoto, A. Shinohara,  
M. Takeda', and S. Arikawa'  
Kyushu University, 'Japan Science and Technology Corporation
Poster Session

LIPT: A Reversible Lossless Text Transform to Improve Compression Performance ........................................... 481
    F.S. Awan, N. Zhang, N. Motgi, R.T. Iqbal, and A. Mukherjee
    University of Central Florida

Architecture for Efficient Implementation of the YK Lossless Data Compression Algorithm .................................. 482
    A. Banerji and S. Goel
    Hughes Network Systems

Lossless Compression for Satellite Packet Networks Using the YK Algorithm .................................................. 483
    A. Banerji and D. Dillon
    Hughes Network Systems

Noisy Image Compression: A Comparison of Wavelets, Multiwavelets, Wavelet Packets, and Multiwavelet Packets .......... 484
    A.P. Beegan and A.E. Bell
    Virginia Tech

On Parent-Child Coding Gain in Zero-Tree Based Coders ................................................................................. 485
    A. Bilgin and M.W. Marcellin
    The University of Arizona

Improving Wavelet Compression with Neural Networks ...................................................................................... 486
    C.J.C. Burges, P.Y. Simard, and H.S. Malvar
    Microsoft Research

Error-Resilient Block Sorting ......................................................................................................................... 487
    L. Butterman and N. Memon
    Stuyvesant High School, 'Brooklyn Polytechnic University

FEC-Based Wireless Video Streaming with Pre-Interleaving ............................................................................ 488
    J. Cai and C.W. Chen
    University of Missouri-Columbia

An Efficient Data Embedding Algorithm for H.263 Compatible Video Coding ..................................................... 489
    P.-C. Chang, T.-H. Wang, and T.-H. Lee
    National Central University

Feature Difference Classification in Fractal Image Coding .................................................................................... 490
    Y. Chen and F. Zhang
    Nanjing University

Fast Vertex Transformation for 3D Rendering through Predictive Vector Quantization ........................................ 491
    P.H. Choub and T.H. Meng
    Stanford University

LZ1 Compression of Binary Images Using a Simple Rectangle Greedy Matching Technique .................................. 492
    L. Cinque, E. Grande, and S. De Agostino
    University of Rome, 'Armstrong Atlantic University

Video Coding for Streaming Media Delivery on the Internet .............................................................................. 493
    RealNetworks, Inc.
The Qualitative Modeling and Compression of the Request Sequences 
in ARQ Protocols ........................................................................................................ 494
  N. Ekstrand, B. Rathonyi', Y. Shtarkov', and B. Smeets'
  Lund University, 'Ericsson Mobile Communication AB,
  'IITP Russian Academy of Sciences
A Posteriori Quantized Matching Pursuit ............................................................ 495
  P. Frossard and P. Vandergheynst
  Swiss Federal Institute of Technology
Real-Time Decompression of Streaming Video Using Mobile Code ..................... 496
  A. Drama, D. Meyer, and W. Szpankowski
  Purdue University
A Comparison between Two Error Detection Techniques
  Using Arithmetic Coding ...................................................................................... 497
  B. He and C.N. Manikopoulos
  New Jersey Institute of Technology
Edge-Based Artifact Mitigation in a Wavelet Transform Coding Framework ....... 498
  A. Kalyanaraman and P.J. Flynn
  The Ohio State University
Just-in-Time Browsing for Digital Images ............................................................... 499
  D.J. Kennard and W.A. Barrett
  Brigham Young University
Lossless Fast Full Search Algorithm in Motion Estimation
  Using Various Matching Scans from Image Localization ..................................... 500
  J.-N. Kim, S.-C. Byun, and B.-H. Ahn
  Kwangju Institute of Science and Technology
Improving Binary Coding for Prediction-Based Text Compression ...................... 501
  G. Lakhani
  Texas Tech University
Compror: Compression with a Factor Oracle ......................................................... 502
  A. Lefebvre and T. Lecroq
  Université de Rouen
Glichawls — Grey Level Image Compression
by Adaptive Weighted Least Squares ...................................................................... 503
  B. Meyer and P. Tischer
  Monash University
TMWode — An Object Oriented Image Modelling Framework ............................. 504
  B. Meyer and P. Tischer
  Monash University
Application of Directional Wavelets to Image Compression ................................. 505
  K. Miettinen
  Eastman Kodak Company
Adaptive and Proadaptive Image Compression .................................................... 506
  V.N. Oulianov
  Tomsk State University of Control Systems and Radioelectronics
Delta Encoding of Related Web Pages .................................................................. 507
  Z. Ouyang, N. Memon, and T. Suei
  Brooklyn Polytechnic University
Multiple Description Coding Using Exact Discrete Radon Transform ............................................ 508
B. Parrein, N. Normand, and J.P. Guédon
Image Vidéo Communication Team - EPUN

An Optimizing Lossy Generalization of LZW .......................................................... 509
S. Pigeon
Université de Montréal

Masked Wavelets: Applications to Image Compression ............................................. 510
S. Pigeon and L. Bottou
Université de Montréal, 'AT&T Research

Start/Stop Codes ........................................................................................................ 511
S. Pigeon
Université de Montréal

Unconstrained Vector Length in Fast Wavelet Transforms ........................................ 512
S. Pigeon
Université de Montréal

Lower Bounding the Optimal LZ78-Parsing .............................................................. 513
M.S. Pinho and W.A. Finanmore
Universidade Estadual Paulista, 'Pontificia Universidad Católica

JPEG Compressed Domain Image Retrieval by Colour and Texture ................................... 514
G. Schaefer
University of East Anglia

Image Compression Using Blocksort ............................................................................. 515
M. Schindler and B. Sebastian
Intelligent Compression Technologies

Better Text Compression from Fewer Lexical n-Grams .............................................. 516
T.C. Smith and M. Lorenz
University of Waikato

Adaptive Quantization for Lossy Image Compression Controlled by Noise Detection ................................................. 517
T. Strutz
University of Rostock

Source Coding with Minimal and Rate-Independent Search and Memory Complexity ............................................. 518
A.D. Subramaniam and B.D. Rao
University of California at San Diego

Complexity-Distortion Optimal Search Algorithm for Block Motion Estimation ................................. 519
P.L. Tai, C.T. Liu, and J.S. Wang
Taiwan National Tsing Hua University

Deterministic Chaos and Information Theory ................................................................... 520
M.R. Titchener and W.B. Ebeling
The University of Auckland, 'Humboldt University

Flexible Storage of Images for Digital Cameras ................................................................ 521
R.J. van der Vleuten, R.P. Kleihorst, and C. Hentschel
Philips Research Laboratories

Error Detection by Parity Checks for H.263 Compatible Video Coding ................................. 522
Taiwan National Central University
