Keynote Address

Science and Engineering: A Collusion of Cultures ........................................................................ 2
Tony Hoare, Microsoft Research Ltd., Cambridge, UK
Session 1A: Security Protection: Architectural Approaches

Augmenting Branch Predictor to Secure Program Execution ................................................................. 10
Yixin Shi and Gyungho Lee

A Firewall for Routers: Protecting against Routing Misbehavior ............................................................. 20
Ying Zhang, Z. Morley Mao, and Jia Wang

An Architectural Approach to Preventing Code Injection Attacks ......................................................... 30
Ryan Riley, Xuxian Jiang, Dongyan Xu

Session 1B: Software Fault Tolerance

Failure Resilience for Device Drivers ........................................................................................................ 41
Jorrit N. Herder, Herbert Bos, Ben Gras, Philip Homburg, and Andrew S. Tanenbaum

Fault Tolerance Connectors for Unreliable Web Services ......................................................................... 51
Nicolas Salatge and Jean-Charles Fabre

Robustness and Security Hardening of COTS Software Libraries .......................................................... 61
Martin Süßkraut and Christof Fetzer

Session 2A: Distributed Consensus

Automatic Verification and Discovery of Byzantine Consensus Protocols .................................................. 72
Piotr Zieliński

Knowledge Connectivity vs. Synchrony Requirements for Fault-Tolerant Agreement in Unknown Networks ......................................................... 82
Fabiola Greve and Sébastien Tixeuil

Communication Predicates: A High-Level Abstraction for Coping with Transient and Dynamic Faults ............................................................................. 92
Martin Hutle and André Schiper

Synchronous Consensus with Mortal Byzantines ..................................................................................... 102
Josef Widder, Günther Gridling, Bettina Weiss, and Jean-Paul Blanquart

Session 2B: Practical Experience Reports

Reliability Techniques for RFID-Based Object Tracking Applications .................................................. 113
Ahmad Rahmati, Lin Zhong, Matti Hiltunen, and Rittwik Jana
Profiling Attacker Behavior following SSH Compromises

Daniel Ramsbrock, Robin Berthier, and Michel Cukier

Dependability Assessment of Grid Middleware

Nik Looker and Jie Xu

Assessing Robustness of Web-Services Infrastructures

Marco Vieira, Nuno Laranjeiro, and Henrique Madeira

Protecting Cryptographic Keys from Memory Disclosure Attacks

Keith Harrison and Shouhuai Xu

Session 3A: Embedded Systems

Fault Tolerant Planning for Critical Robots

Benjamin Lussier, Matthieu Gallien, Jérémie Guiochet, Félix Ingrand,
Marc-Olivier Killijian, and David Powell

Insights into the Sensitivity of the BRAIN (Braided Ring Availability Integrity Network)—
On Platform Robustness in Extended Operation

Michael Paulitsch and Brendan Hall

A Tunable Add-On Diagnostic Protocol for Time-Triggered Systems

Marco Serafini, Neeraj Suri, Jonny Vinter, Astrit Ademaj, Wolfgang Brandstätter,
Fulvio Tagliabò, and Jens Koch

Session 3B: Dependability Modeling

Enhanced Reliability Modeling of RAID Storage Systems

Jon G. Elerath and Michael Pecht

On a Modeling Framework for the Analysis of Interdependencies in Electric Power Systems

Silvano Chiaradonna, Paolo Lollini, and Felicita Di Giandomenico

Session 4A: Hardware Fault Tolerance: Emerging Challenges

Superscalar Processor Performance Enhancement through Reliable Dynamic Clock Frequency Tuning

Viswanathan Subramanian, Mikel Bezdek, Naga D. Avirneni, and Arun Somani

Determining Fault Tolerance of XOR-Based Erasure Codes Efficiently

Jay J. Wylie and Ram Swaminathan

Fault Tolerant Approaches to Nanoelectronic Programmable Logic Arrays

Wenjing Rao, Alex Oraloglu, and Ramesh Karri
Session 4B: VM Rejuvenation and Network Reliability

Concilium: Collaborative Diagnosis of Broken Overlay Routes ................................................................. 225
   James W. Mickens and Brian D. Noble

R-Sentry: Providing Continuous Sensor Services against Random Node Failures ........................................ 235
   Shengchao Yu and Yanyong Zhang

A Fast Rejuvenation Technique for Server Consolidation with Virtual Machines ...................................... 245
   Kenichi Kourai and Shigeru Chiba

Session 5A: Soft Errors: Analysis and Protection

A Cost-Effective Dependable Microcontroller Architecture with Instruction-Level Rollback for Soft Error Recovery .......................................................... 256
   Teruaki Sakata, Teppei Hirotsu, Hiromichi Yamada, and Takeshi Kataoka

Architecture-Level Soft Error Analysis: Examining the Limits of Common Assumptions .............................. 266
   Xiaodong Li, Sarita V. Adve, Pradip Bose, and Jude A. Rivers

Feedback Redundancy: A Power Efficient SEU-Tolerant Latch Design for Deep Sub-micron Technologies .................................................................................................. 276
   M. Fazeli, A. Patooghy, S. G. Miremadi, and A. Ejlali

Using Register Lifetime Predictions to Protect Register Files against Soft Errors ...................................... 286
   Pablo Montesinos, Wei Liu, and Josep Torrellas

Session 5B: Processor Level Fault Tolerance

Using Process-Level Redundancy to Exploit Multiple Cores for Transient Fault Tolerance ...................... 297
   Alex Shye, Tipp Moseley, Vijay Janapa Reddi, Joseph Blomstedt, and Daniel A. Connors

Inherent Time Redundancy (ITR): Using Program Repetition for Low-Overhead Fault Tolerance ................ 307
   Vimal Reddy and Eric Rotenberg

Utilizing Dynamically Coupled Cores to Form a Resilient Chip Multiprocessor ....................................... 317
   Christopher LaFrieda, Engin İpek, José F. Martinez, and Rajit Manohar

BlackJack: Hard Error Detection with Redundant Threads on SMT ...................................................... 327
   Ethan Schuchman and T. N. Vijaykumar

Session 6A: Critical Systems: Risk Analysis and Assurance

Confidence: Its Role in Dependability Cases for Risk Assessment ........................................................... 338
   Robin E. Bloomfield, Bev Littlewood, and David Wright

Assurance Based Development of Critical Systems .................................................................................. 347
   Patrick J. Graydon, John C. Knight, and Elisabeth A. Strunk
Session 6B: Security Threats and Novel Detection

Multiprocessors May Reduce System Dependability under File-Based Race Condition Attacks ................................................................. 358
   Jinpeng Wei and Calton Pu

Understanding Resiliency of Internet Topology against Prefix Hijack Attacks ............................................................................................... 368
   Mohit Lad, Ricardo Oliveira, Beichuan Zhang, and Lixia Zhang

User Discrimination through Structured Writing on PDAs ................................................................................................................................. 378
   Rachel R. M. Roberts, Roy A. Maxion, Kevin S. Kiltourhy, and Fahd Arshad

Session 7A: Timing Model and Network Protocols

How to Choose a Timing Model? ........................................................................................................................................................................ 389
   Idit Keidar and Alexander Shraer

E lecting an Eventual Leader in an Asynchronous Shared Memory System ............................................................................................................ 399
   Antonio Fernández, Ernesto Jiménez, and Michel Raynal

Minimizing Response Time for Quorum-System Protocols over Wide-Area Networks .................................................................................. 409
   Florian Oprea and Michael K. Reiter

HyParView: A Membership Protocol for Reliable Gossip-Based Broadcast ........................................................................................................ 419
   João Leitão, José Pereira, and Luís Rodrigues

Session 7B: Security Protection: Algorithmic Approaches

A Lightweight Mechanism for Dependable Communication in Untrusted Networks ................................................................................................ 430
   Michael Rogers and Saleem Bhatti

Dynamic Cross-Realm Authentication for Multi-party Service Interactions ......................................................................................................... 440
   Dacheng Zhang, Jie Xu, and Xianxian Li

Enhancing DNS Resilience against Denial of Service Attacks .......................................................................................................................... 450
   Vasileios Pappas, Dan Massey, and Lixia Zhang

Automatic Cookie Usage Setting with CookiePicker ........................................................................................................................................ 460
   Chuan Yue, Mengjun Xie, and Haining Wang

Session 8A: Networking

Greedy Receivers in IEEE 802.11 Hotspots .......................................................................................................................................................... 471
   Mi Kyung Han, Brian Overstreet, and Lili Qiu

Emergent Structure in Unstructured Epidemic Multicast .................................................................................................................................... 481
   Nuno Carvalho, José Pereira, Rui Oliveira, and Luís Rodrigues
The Case for FEC-Based Reliable Multicast in Wireless Mesh Networks.................................................................491
*Dimitrios Koutsonikolas and Y. Charlie Hu*

### Session 8B: Experimental Dependability Assessment

On the Selection of Error Model(s) for OS Robustness Evaluation ...........................................................................502
*Andreas Johansson, Neeraj Suri, and Brendan Murphy*

Experimental Risk Assessment and Comparison Using Software Fault Injection ...................................................512
*R. Moraes, J. Durães, R. Barbosa, E. Martins, and H. Madeira*

Foundations of Measurement Theory Applied to the Evaluation of Dependability Attributes .............................522
*Andrea Bondavalli, Andrea Ceccarelli, Lorenzo Falai, and Michele Vadursi*

### PERFORMANCE AND DEPENDABILITY SYMPOSIUM (PDS)

### Session 1C: System Architecture and Software Assessment

A Framework for Architecture-Level Lifetime Reliability Modeling .................................................................534
*Jeonghee Shin, Victor Zyuban, Zhigang Hu, Jude A. Rivers, and Pradip Bose*

Processor-Level Selective Replication ................................................................................................................544
*Nithin Nakka, Karthik Pattabiraman, and Ravishankar Iyer*

Robustness Testing of the Windows DDK ...........................................................................................................554
*Manuel Mendonça and Nuno Neves*

### Session 2C: Measurement and Monitoring

SLAM: Sleep-Wake Aware Local Monitoring in Sensor Networks .......................................................................565
*Issa Khalil, Saurabh Bagchi, and Ness B. Shroff*

What Supercomputers Say: A Study of Five System Logs ...................................................................................575
*Adam Oliner and Jon Stearley*

How Do Mobile Phones Fail? A Failure Data Analysis of Symbian OS Smart Phones .........................................585
*Marcello Cinque, Domenico Cotroneo, Zbigniew Kalbarczyk, and Ravishankar K. Iyer*

A Real-Time Network Traffic Profiling System ...................................................................................................595
*Kuai Xu, Feng Wang, Supratik Bhattacharyya, and Zhi-Li Zhang*

### Session 3C: Practical Experience Reports

RAS by the Yard ..................................................................................................................................................606
*Alan Wood and Swami Nathan*
Web Services Wind Tunnel: On Performance Testing Large-Scale Stateful Web Services

Marcelo De Barros, Jing Shiau, Chen Shang, Kenton Gidewall, Hui Shi, and Joe Forsmann

Application of Software Watchdog as a Dependability Software Service for Automotive Safety Relevant Systems

Xi Chen, Juejing Feng, Martin Hiller, and Vera Lauer

Session 4C: Distributed Algorithms

Evaluating the Impact of Simultaneous Round Participation and Decentralized Decision on the Performance of Consensus

Livia Sampaio, Michel Hurfin, Francisco Brasileiro, and Fabiola Greve

On the Cost of Modularity in Atomic Broadcast

Olivier Rütti, Sergio Mena, Richard Ekwall, and André Schiper

Eventually \( k \)-Bounded Wait-Free Distributed Daemons

Yantao Song and Scott M. Pike

Session 5C: Availability of Distributed Systems

Measuring Availability in Optimistic Partition-Tolerant Systems with Data Constraints

Mikael Asplund, Simin Nadjm-Tehrani, Stefan Beyer, and Pablo Galdamez

Scaling and Continuous Availability in Database Server Clusters through Multiversion Replication

Kaloian Manassiev and Cristiana Amza

Improving Recoverability in Multi-tier Storage Systems

Marcos K. Aguilera, Kimberly Keeton, Arif Merchant, Kiran-Kumar Muniswamy-Reddy, and Mustafa Uysal

Portable and Efficient Continuous Data Protection for Network File Servers

Ningning Zhu and Tzi-cker Chiueh

Session 6C: Modeling and Evaluation

Variational Bayesian Approach for Interval Estimation of NHPP-Based Software Reliability Models

Hiroyuki Okamura, Michael Grottke, Tadashi Dohi, and Kishor S. Trivedi

Dynamic Fault Tree Analysis Using Input/Output Interactive Markov Chains

Hichem Boudali, Pepijn Crouzen, and Mariëlle Stoelinga

Uniformity by Construction in the Analysis of Nondeterministic Stochastic Systems

Holger Hermanns and Sven Johr
Session 7C: Quality of Service and Error Recovery

A Reinforcement Learning Approach to Automatic Error Recovery ................................................................. 729
Qijun Zhu and Chun Yuan

On the Quality of Service of Crash-Recovery Failure Detectors ............................................................................. 739
Tiejun Ma, Jane Hillston, and Stuart Anderson

Sandip Agarwala, Fernando Alegre, Karsten Schwan, and Jegannathan Mehlalingham

Bounding Peer-to-Peer Upload Traffic in Client Networks ....................................................................................... 759
Chun-Ying Huang and Chin-Laung Lei

Session 8C: Stochastic Modeling

Performability Models for Multi-server Systems with High-Variance Repair Durations ........................................... 770
Hans-Peter Schwefel and Imad Antonios

Computing Battery Lifetime Distributions ................................................................................................................ 780
Lucia Cloth, Marijn R. Jongerden, and Boudewijn R. Haverkort

Quantifying the Effectiveness of Mobile Phone Virus Response Mechanisms ........................................................ 790
Elizabeth Van Ruitenbeek, Tod Courtney, William H. Sanders, and Fabrice Stevens

SPECIAL TRACKS

DSN 2007 Tutorials ............................................................................................................................................... 801
Chair: Luis Rodrigues, Universidade de Lisboa, Portugal

DSN 2007 Workshops ........................................................................................................................................... 802
Chair: Christof Fetzer, Technische Universität Dresden, Germany

Workshop on Dependable Application Support for Self-Organizing Networks (DASSON 2007) .............................. 803
Chairs: Paul Ezhichelvan, Newcastle University, UK
        Michel Raynal, ASAP, IRISA, Rennes, France
        Ajoy Datta, University of Nevada, Las Vegas, USA

Third Workshop on Hot Topics in System Dependability (HotDep’07) ................................................................. 804
Chairs: Miguel Castro, Microsoft Research, Cambridge, UK
        John Wilkes, Hewlett Packard Laboratories, Palo Alto, CA, USA

Workshop on Architecting Dependable Systems (WADS 2007) ............................................................................ 805
Chairs: Rogério de Lemos, University of Kent, UK
        Felicita Di Giandomenico, ISTI-CNR, Pisa, Italy
        Cristina Gacek, Newcastle University, UK
Workshop on Assurance Cases for Security—The Metrics Challenge ................................................................. 807
Chairs: Robin Bloomfield, City University, London, UK
       Marcelo Masera, Joint Research Center of the European Commission, Italy
       Ann Miller, University of Missouri at Rolla, MO, USA
       O. Sami Saydjari, Cyber Defense Agency, USA
       Charles B. Weinstock, Software Engineering Institute, USA

Workshop on Dependable and Secure Nanocomputing ...................................................................................... 809
Chairs: Jean Arlat, LAAS-CNRS, University of Toulouse, Toulouse, France
       Ravishankar K. Iyer, University of Illinois at Urbana-Champaign, IL, USA
       Michael Nicolaïdis, TIMA and iROC Technologies, Grenoble, France

Student Forum ..................................................................................................................................................... 811
Chair: Farnam Jahanian, University of Michigan, Ann Arbor, MI, USA

Fast Abstracts ....................................................................................................................................................... 812
Chair: Hiroshi Nakamura, University of Tokyo, Japan

The National Programme for Information Technology in the UK Health Service:
Dependability Challenges and Strategies ........................................................................................................ 813
Chair: Brian Randell, Newcastle University, UK

Industry Session ................................................................................................................................................ 814
Chair: Lisa Spainhower, IBM, USA

Author Index ....................................................................................................................................................... 815
