# 2008 Japan-China Joint Workshop on Frontier of Computer Science and Technology
## FCST 2008
### Table of Contents

**Message from Workshop Chairs** .............................................................................................................viii
**Organization Committee** ........................................................................................................................ix

---

**Networking and Security**

Survey of Security Requirements, Attacks and Network Integration in Wireless Mesh Networks .................................................................3

*Hassen Redwan and Ki-Hyung Kim*

Privacy-Preserving Practical Convex Hulls Protocol .................................................................10

*Youwen Zhu, Liusheng Huang, Wei Yang, Zhili Chen, Lingjun Li, Zhenshan Yu, and Yonglong Luo*

A Practical Three-Dimensional Privacy-Preserving Approximate Convex Hulls Protocol ......................................................................................17

*Dong Li, Liusheng Huang, Wei Yang, Youwen Zhu, Yonglong Luo, Zhili Chen, Lingjun Li, and Yun Ye*

Dynamic Spectrum Allocation MAC Protocol Based on Cognitive Radio for QoS Support .........................................................................24

*Inwhee Joe and Seonbong Son*

An Energy Efficient Weight-Clustering Algorithm in Wireless Sensor Networks .................................................................30

*Lu Cheng, Depei Qian, and Weiguo Wu*

Tracking and Repairing Damaged Databases Using Before Image Table ......................................................................................36

*Meiyi Xie, Hong Zhu, Yucai Feng, and Guanrong Hu*

Access Graph Based Risk Assessment Model for Network Information System ......................................................................................42

*Huan Wang and Gendu Zhang*
Software Engineering and Programming Languages

A Distributed Workflow Management System Model and Its Scheduling Algorithm ........................................51
   Ding Changsong, Hu Zhoujun, Hu Zhigang, and Li Xi
Evolutionary Testing of Unstructured Programs Using a Testability Transformation Approach .................................................................59
   Sheng Jiang and Yansheng Lu
MP-Templates Operating Toolkit in Movie-Based Programming ........................................................................67
   Dmitry Vazhenin and Alexander Vazhenin
Design of General User Interface for Automatic Web Service Composition ..................................................75
   Haruhiko Takada and Incheon Paik
Spatial Data Compression Techniques for GML .........................................................................................79
   Yuzhen Li, Takashi Imatsumi, and Jihong Guan

Storage System and Technology

An Energy Efficient, Low Cost, Hybrid Storage System Based on Utility ....................................................87
   Lingfang Zeng, Dan Feng, Bharadwaj Veeravalli, and Qingsong Wei
TSPSCDP: A Time-Stamp Continuous Data Protection Approach Based on Pipeline Strategy .........................96
   Jingning Liu, Tianming Yang, Zuoheng Li, and Ke Zhou
Study and Optimize the Process of Batch Small Files Replication ..........................................................103
   Liang Xiao, Qiang Cao, Changsheng Xie, and Chuanwen Wu
A Duplicate-Aware Data Replication ..........................................................................................................112
   Zhu Jianfeng, Qin Leihua, Zeng Dong, and Zhou Jinli

Semantic Computing

A Novel Hybrid system for Large-Scale Chinese Text Classification Problem .............................................121
   Zhong Gao, Guanming Lu, and Daquan Gu
An Approach to Implementing an Intelligent Web Search ........................................................................125
   Vitaly Klyuev
A Schema Matching Method Based on Partial Functional Dependencies .................................................131
   Li Guo-Hui, Du Xiao-Kun, Hu Fang-Xiao, and Du Jian-Qiang
The Axiomatic Semantics of PDFD ..............................................................................................................139
   Gao Xiaolei and Huaikou Miao

Virtualization and Multimedia Technology

XenLR: Xen-based Logging for Deterministic Replay ...............................................................................149
   Haikun Liu, Hai Jin, Xiaofei Liao, and Zhengqiu Pan
VNIX: Managing Virtual Machines on Clusters ..........................................................................................155
   Xuanhua Shi, Haoyu Tan, Song Wu, and Hai Jin
Hand Tracking by Particle Filtering with Elite Particles Mean Shift .......................................................163
   Shengtong Zhong and Fei Hao
A New Technique of Modeling Acoustic Echo and its Implementation Using FPGA ................................168
   Amin Mohamed Nassar and Ashraf Mohamed Ali
Towards Better Content Visibility in Video Recommender Systems .........................................................181
   Nalin Chakoo, Rahul Gupta, and Jayaprada Hiremath

Optimizing Two-Dimensional Continuous Dynamic Programming for Cell Broadband Engine Processors .................................................................................................................................186
   Takahiro Machino, Shin-ya Iwazaki, Yuichi Okuyama, Junji Kitamichi,
   Ken-ichi Kuroda, and Ryuichi Oka

Pattern Recognition and Virtualization Technology

Economical Solution for an Easy to Use Interactive Whiteboard .................................................................197
   Zhixun Wang and James Louey

A Segment Extraction Algorithm Based on Polygonal Approximation for On-Line Chinese Character Recognition .............................................................................................................................204
   Xinqiao Lu, Xiaojuan Liu, Guoqiang Xiao, Enmin Song, Ping Li, and Qiaoling Luo

An Invariant Pattern Recognition System Using the Bayesian Inference on Hierarchical Sequences with Pre-processing ...........................................................................................................208
   Zunyi Tang, Wenlong Liu, and Shuxue Ding

Head Pose Recognition with NNC-Trees ........................................................................................................214
   Jie Ji, Kei Sato, Naoki Tominaga, and Qiangfu Zhao

Inducing NNTrees Suitable for Hardware Implementation ................................................................................220
   Hirotomo Hayashi and Qiangfu Zhao

Author's Index ..................................................................................................................................................226
