Introduction to the Symposium Section of the Proceedings

Ralph H. Sprague, Jr.
HICSS-39 Conference Chair

This section of the HICSS Proceedings contains papers presented at two of the seven Symposia held in conjunction with the Conference. A symposium is generally a full day of activities focused on a relatively well-defined topic that would be of interest to HICSS attendees. The purpose is to explore, discuss, document, and add to the literature base on that topic where invited authors present a collection of high-quality academic papers. A symposium is more flexible than a minitrack and more formal than a workshop. Symposium leaders may invite papers from specific authors and may also use more general calls for submissions. Not all papers presented and discussed at a Symposium are published. The Symposium papers included in this section of the Proceedings were submitted to the peer-review system in accordance with the conference schedule, and reviewed by at least three reviewers in addition to the Symposium leaders.
