Message from the International Workshop on Tools and Techniques in Software Development Processes (TTSDP 2010) Organizing Chair

Welcome to the Second International Workshop on Tools and Techniques in Software Development Processes (TTSDP 2010) organized in conjunction with the 2010 International Conference on Computational Science and Its Applications (ICCSA 2010) held 23-26 March 2010 at Kyushu Sangyo University in Fukuoka, Japan. Tools and techniques in software development are evolving very rapidly with fast changing technologies. This workshop is aimed at bringing together computer scientists, software developers, practitioners and academicians, who are working on the frontier issues, new techniques, and technologies in the modern software development processes.

This year we received large number of paper submissions from all around the world. We accepted only seven papers of the whole submissions for final presentation. It was difficult task selecting papers for final presentation because several papers that could not be included were very interesting and of high merit. We are highly thankful to all the authors who have shown their interest in this workshop and submitted their papers. We are also thankful to the program committee members and external reviewers for their efforts in completing the review process in time. Finally yet importantly, we thank Prof. Osvaldo Gervasi and Prof. Bernady O. Apduhan for their continuous help and cooperation.

Sanjay Misra

TTSDP 2010 Workshop Organizing Chair
