Message from the Honorary Chair, General.................................................................xvii
Chair and Program Chairs..............................................................................................xviii
Organizing Committee...................................................................................................xix
Program Committee.....................................................................................................xx
Publications....................................................................................................................xxi
Reviewers......................................................................................................................xxii
Additional Reviewers....................................................................................................xxiii
Introduction...................................................................................................................xxiv

Session 1 - Track I: Word Spotting I
Comparison of Bernoulli and Gaussian HMMs Using a Vertical Repositioning Technique for Off-Line Handwriting Recognition ..........................................................3

Patrick Doetsch, Mahdi Hamdani, Hermann Ney, Adrià Giménez, Jesús Andrés-Ferrer, and Alfons Juan

Separability versus Prototypicality in Handwritten Word Retrieval .................................8

Jean-Paul van Oosten and Lambert Schomaker

Script Independent Word Spotting in Offline Handwritten Documents Based on Hidden Markov Models ........................................................................................................14

Safwan Wshah, Gaurav Kumar, and Venu Govindaraju

Session 1 - Track II: Digit Recognition
Annotating Handwritten Characters with Minimal Human Involvement in a Semi-supervised Learning Strategy ..................................................................................23

Jan Richarz, Szilárd Vajda, and Gemot A. Fink

On the Possibility of Instance-Based Stroke Recovery ..................................................29

Yutaro Iwakiri, Soma Shiraishi, Yaokai Feng, and Seiich Uchida
Benchmarking of Update Learning Strategies on Digit Classifier Systems ..................................................................................35
  D. Barbuzzi, D. Impedovo, and G. Pirlo

Session 2 - Track I: Word Spotting II
Arabic Handwritten Word Spotting Using Language Models ....................................................................................................43
  Muna Khayyat, Louisa Lam, and Ching Y. Suen

Semi-supervised Learning for Cursive Handwriting Recognition Using
Keyword Spotting ........................................................................................................................................................................49
  Volkmart Frinken, Markus Baumgartner, Andreas Fischer, and Horst Bunke

The Role of the Users in Handwritten Word Spotting Applications: Query
Fusion and Relevance Feedback ............................................................................................................................................55
  Marçal Rusiñol and Josep Lladós

Session 2 - Track II: Codebook for Handwriting Recognition
Learning Text-Line Segmentation Using Codebooks and Graph Partitioning ................................................................................63
  Le Kang, Jayant Kumar, Peng Ye, and David Doermann

Off-Line Features Integration for On-Line Handwriting Graphemes Modeling
Improvement ......................................................................................................................................................................................69
  Houcine Boubaker, Aymen Chaabouni, Najiba Tagougui, Monji Kherallah,
  Adel M. Alimi, and Haikal El Abed

Model-Based Tabular Structure Detection and Recognition in Noisy
Handwritten Documents .........................................................................................................................................................75
  Jin Chen and Daniel Lopresti

Session 3 - Track I: Flowchart Recognition, Segmentation Techniques
On-Line Handwritten flowchart Recognition, Beautification and Editing System ........................................................................83
  Hidetoshi Miyao and Rei Maruyama

A Touching Character Database from Chinese Handwriting for Assessing
Segmentation Algorithms .........................................................................................................................................................89
  Liang Xu, Fei Yin, Qiu-Feng Wang, and Cheng-Lin Liu

A New Efficient Graphemes Segmentation Technique for Offline Arabic
Handwriting ..................................................................................................................................................................................95
  Hesham M. Eraqi and Sherif Abdelazeem
Session 3 - Track II: Word Segmentation
Handwritten and Machine Printed Text Separation in Document Images Using the Bag of Visual Words Paradigm ................................................................. 103
  Konstantinos Zagoris, Ioannis Pratikakis, Apostolos Antonacopoulos,
  Basilis Gatos, and Nikos Papamarkos

A New Method for Text Verification Based on Random Forests ........................................ 109
  Yang Zhang, Chunheng Wang, Baihua Xiao, and Cunzhao Shi

Statistical Hypothesis Testing for Handwritten Word Segmentation Algorithms .................. 114
  Mehdi Haji, Kalyan Asis Sahoo, Tien D. Bui, Ching Y. Suen,
  and Dominique Ponson

Session 4 - Track I: Multilingual Recognition
A Comparative Study of Persian/Arabic Handwritten Character Recognition .......................... 123
  Alireza Alaei, Umapada Pal, and P. Nagabhushan

A Hybrid Language Model for Handwritten Chinese Sentence Recognition .......................... 129
  Qizhen He, Shijie Chen, Mingxi Zhao, and Wei Lin

Online Arabic Handwritten Digits Recognition ........................................................................ 135
  Sherif Abdel Azeem, Maha El Meseery, and Hany Ahmed

Session 4 - Track II: Character Classification
k-NN Classification of Handwritten Characters via Accelerated GAT Correlation .................... 143
  Toru Wakahara and Yukihiko Yamashita

Bag-of-Features Representations for Offline Handwriting Recognition Applied to
Arabic Script .................................................................................................................. 149
  Leonard Rothacker, Szilárd Vajda, and Gernot A. Fink

Building a Compact On-Line MRF Recognizer for Large Character Set Using Structured Dictionary Representation and Vector Quantization Technique ........................................ 155
  Bilan Zhu and Masaki Nakagawa

Session 5 - Track I: Bank Check Processing and Postal Automation
The New Method of Identification of Handwriting Using Volumes of Indentations .................. 163
  Takeshi Furukawa

Multi-lingual City Name Recognition for Indian Postal Automation ........................................ 169
  Umapada Pal, Ramit Kumar Roy, and Fumitaka Kimura
## Session 5 - Track II: Mathematical Expression

Unbiased Evaluation of Handwritten Mathematical Expression Recognition ........................................181  
Francisco Álvaro, Joan-Andreu Sánchez, and José-Miguel Benedit

Using Speech for Handwritten Mathematical Expression Recognition  
Disambiguation .........................................................................................................................................187  
Sofiane Medjkoune, Harold Mouchère, Simon Petitrenaud, and Christian Viard-Gaudin

A System for Recognition of On-Line Handwritten Mathematical Expressions ........................................193  
Fotini Simistira, Vassilis Papavassiliou, Vassilis Katsouros, and George Carayannis

## Poster Session A

Statistical Text Line Analysis in Handwritten Documents ........................................................................201  
Vicente Bosch, Alejandro Héctor Toselli, and Enrique Vidal

Handwritten English Word Recognition Based on Convolutional Neural Networks ...........................................207  
Aiquan Yuan, Gang Bai, Po Yang, Yanni Guo, and Xinting Zhao

Confused Distance Maximization for Large Category Dimensionality Reduction ........................................213  
Xu-Yao Zhang and Cheng-Lin Liu

Applying Discriminatively Optimized Feature Transform for HMM-based Off-Line Handwriting Recognition ........................................................................................................219  
Jin Chen, Bing Zhang, Huaigu Cao, Rohit Prasad, and Prem Natarajan

Signature Based Document Retrieval Using GHT of Background Information ........................................225  
Partha Pratim Roy, Souvik Bhowmick, Umapada Pal, and Jean Yves Ramel

Analysis of Stability in Static Signatures Using Cosine Similarity ................................................................231  
D. Impedovo, G. Pirlo, L. Sarcinella, E. Stasolla, and C.A. Trullo

A Novel Technique for Handwritten Digit Classification Using Genetic Clustering ........................................236  
S. Impedovo and F.M. Mangini

Handwritten Digit Recognition Based on a DSmT-SVM Parallel Combination ........................................241  
Nassim Abbas, Youcef Chibani, and Hassiba Nemmour

An MLP for Binarizing Images of Old Manuscripts .................................................................................247  
Toufik Sari, Abderhmane Kefali, and Halima Bahi

A New Text Extraction Method Incorporating Local Information .................................................................252  
Yang Zhang, Chunjheng Wang, Baihua Xiao, and Cunzhao Shi

Moment-Based Image Normalization for Handwritten Text Recognition ................................................256  
Michał Kozielski, Jens Forster, and Hermann Ney
Page Segmentation Based on Steerable Pyramid Features ...............................................................262
Mohamed Benjelil, Rémy Mullot, and Adel M. Alimi

Structural Features Extraction for Handwritten Arabic Personal Names
Recognition ........................................................................................................................................268
Afef Kacem, Nadia Aouïti, and Abdel Belaïd

Segmentation and Word Spotting Methods for Printed and Handwritten Arabic
Texts: A Comparative Study .............................................................................................................274
Mariem Gargouri Kchaou, Slim Kanoun, and Jean-Marc Ogier

Analysis of Preprocessing Techniques for Latin Handwriting Recognition ....................................280
Hendrik Pesch, Mahdi Hamdani, Jens Forster, and Hermann Ney

A Study of Handwritten Characters by Shape Descriptors: Doping Using
the Freeman Code ...........................................................................................................................285
Chekib Gmati, Sofiene Haboubi, Abdulqadir Alaqeeli, and Hamid Amiri

Statistical Machine Translation as a Language Model for Handwriting
Recognition ........................................................................................................................................291
Jacob Devlin, Matin Kamali, Krishna Subramanian, Rohit Prasad, and Prem Natarajan

Segmentation and Recognition Strategy of Handwritten Connected Digits
Based on the Oriented Sliding Window .............................................................................................297
Abdeljalil Gattal and Youcef Chibani

Mode Detection in Online Handwritten Documents Using BLSTM Neural
Networks ............................................................................................................................................302
Emanuel Indermühle, Volkmar Frinken, and Horst Bunke

MAYASTROUN: A Multilanguage Handwriting Database ...............................................................308
Sourour Njah, Badreddine Ben Nouma, Hala Bezine, and Adel M. Alimi

Persian Signature Verification Based on Fractal Dimension Using Testing
Hypothesis .........................................................................................................................................313
Atefeh Foroozandeh, Younes Akbari, Mohammad J. Jalili, and Javad Sadri

Recognition of Relatively Small Handwritten Characters or "Size Matters" ....................................319
Vadim Mazalov and Stephen M. Watt

Grouping of Handwritten Bangla Basic Characters, Numerals and Vowel
Modifiers for Multilayer Classification ............................................................................................325
Khondker Nayef Reza and Mumit Khan

Word Spotting Based Retrieval of Urdu Handwritten Documents ...............................................331
Ali Abidi, Akhtar Jamil, Imran Siddiqi, and Khurram Khurshid

Automatic Abbreviation Detection in Medieval Medical Documents ............................................337
C. Malagón, R. Rizky, Y. Kim, F. Marzal, and L. Izquierdo
Off-Line Handwritten Signature Verification Using Contourlet Transform and Co-occurrence Matrix .................................................................343

Assia Hamadène, Youcef Chibani, and Hassiba Nemmour

Dynamic Programming Matching with Global Features for Online Character Recognition .................................................................348

Minoru Mori, Seichi Uchida, and Hitoshi Sakano

Retrieval of Rashi Semi-cursive Handwriting via Fuzzy Logic .................................................................354

Eran Gur and Zeev Zelavsky

Invited Talk I

Invited Lecture I: Strokes against Stroke - Stroke For Strides .................................................................363

Rejean Plamondon

Session 6 - Track I: Signature Recognition I

Handwritten Signature Verification: New Advancements and Open Issues .................................................................367

D. Impedovo, G. Pirlo, and R. Plamondon

Hindi Off-Line Signature Verification .................................................................373

Srikanta Pal, Michael Blumenstein, and Umapada Pal

Online Signature Verification Based on Legendre Series Representation:
Robustness Assessment of Different Feature Combinations .................................................................379

Marianela Parodi, Juan C. Gómez, and Marcus Liwicki

Session 6 - Track II: Writer Identification I

Modeling Writing Styles for Online Writer Identification: A Hierarchical Bayesian Approach .................................................................387

Arti Shivram, Chetan Ramaiah, Utkarsh Porwal, and Venu Govindaraju

Writer-Specific Dissimilarity Normalisation for Improved Writer-Independent Off-Line Signature Verification .................................................................393

Jacques Philip Swanepoel and Johannes Coetzer

A Database for Arabic Handwritten Text Image Recognition and Writer Identification .................................................................399

Anis Mezghani, Slim Kanoun, Maher Khemakhem, and Haikal El Abed

Session 7 - Track I: Writer Identification II

Evolution Maps for Connected Components in Text Documents .................................................................405

Ofer Biller, Klara Kedem, Itshak Dinstein, and Jihad El-Sana

Modeling Handwriting Style: A Preliminary Investigation .................................................................411

Angelo Marcelli, Antonio Parziale, and Adolfo Santoro
Structural Learning for Writer Identification in Offline Handwriting .................................................................417
  Utkarsh Porwal, Chetan Ramaiah, Arti Shivram, and Venu Govindaraju

Session 7 - Track II: Signature Recognition II

Signature Segmentation from Document Images ..................................................................................................425
  Sheraz Ahmed, Muhammad Imran Malik, Marcus Liwicki, and Andreas Dengel

Combination of Signature Verification Techniques by SVM ......................................................................................430
  Takashi Ito, Wataru Ohyama, Tetsushi Wakabayashi, and Fumitaka Kimura

Adaptation of Writer-Independent Systems for Offline Signature Verification .........................................................434
  George S. Eskander, Robert Sabourin, and Eric Granger

Poster Session B

Text Detection and Recognition in Real World Images .............................................................................................443
  Raid Saabni and Moti Zwilling

KHATT: Arabic Offline Handwritten Text Database ...............................................................................................449
  Sabri A. Mahmoud, Irfan Ahmad, Mohammad Alshayeb, Wasi G. Al-Khatib,
  Mohammad Tanvir Parvez, Gernot A. Fink, Volker Märgner, and Haikal El Abed

A Coarse-to-Fine Approach for Handwritten Word Spotting in Large Scale Historical Documents Collection ..........................................................455
  J. Almazán, D. Fernández, A. Fornés, Josep Lladós, and E. Valveny

Procedural Analysis of a Sketching Activity: Principles and Applications ..............................................................461
  Ney Renau-Ferrer and Céline Rémi

A Novel Naive Bayes Voting Strategy for Combining Classifiers ..............................................................................467
  C. De Stefano, F. Fontanella, and A. Scotto di Freca

Semi-customizable Gestural Commands Approach and Its Evaluation .........................................................................473
  Pei Yu Li, Ney Renau-Ferrer, Eric Anquetil, and Eric Jamet

Character Image Patterns as Big Data ......................................................................................................................479
  Seiichi Uchida, Ryosuke Ishida, Akira Yoshida, Wenjie Cai, and Yaokai Feng

Fast Feature Selection for Handwritten Digit Recognition ......................................................................................485
  Hassan Chouaib, Florence Cloppet, and Nicole Vincent

An Unconstrained Benchmark Urdu Handwritten Sentence Database with Automatic Line Segmentation .........................................................................491
  Ahsen Raza, Imran Siddiqi, Ali Abidi, and Fahim Arif

Occluded Character Restoration Using Active Contour with Shape Priors ..................................................................497
  Rafi Cohen, Klara Kedem, Itshak Dinstein, and Jihad El-Sana

A Hybrid for Line Segmentation in Handwritten Documents ....................................................................................503
  Hande Adiguzel, Emre Sahin, and Pınar Duygulu
Multi-script Writer Identification Optimized with Retrieval Mechanism ...............................................509
   Chawki Djeddi, Imran Siddiqi, Labiba Souici-Meslati, and Abdellatif Ennaji
A Multilevel Text-Line Segmentation Framework for Handwritten Historical Documents ..........................................................515
   Ines Ben Messaoud, Hamid Amiri, Haikal El Abed, and Volker Märgner
Denoising Textual Images Using Local/Non-local Smoothing Filters: A Comparative Study ..........................................................521
   Fadoua Drira and Franck Lebourgeois
Optimization of Point Selection on Digital Ink Curves ..........................................................527
   Rui Hu and Stephen M. Watt
Local Feature Based Online Mode Detection with Recurrent Neural Networks ..................................................533
   Sebastian Otte, Dirk Krechel, Marcus Liwicki, and Andreas Dengel
Chinese Payee Name Recognition Based on Seal Information of Chinese Bank Checks ..........................................................538
   Chao Ren and Youbin Chen
MfrDB: Database of Annotated On-Line Mathematical Formulae ..........................................................542
   Jan Stria, Martin Bresler, Daniel Průša, and Václav Hlaváč
Comparing Character Recognition Based Approach with Feature Matching Based Approach for Digital Ink Search ..................................548
   Cheng Cheng, Bilan Zhu, and Masaki Nakagawa
HMM-based Offline Arabic Handwriting Recognition: Using New Feature Extraction and Lexicon Ranking Techniques ..................................554
   Hesham M. Eraqi and Sherif Abdelazeem
Multi-classifier System Configuration Using Genetic Algorithms ..........................................................560
   D. Impedovo, G. Pirlo, and D. Barbuzzi
Two Schemas for Online Character Recognition of Telugu Script Based on Support Vector Machines ..................................................565
   J. Rajkumar, K. Mariraja, K. Kanakapriya, S. Nishanthini, and V.S. Chakravarthy
Competitive Hybrid Exploration for Off-Line Sketches Structure Recognition ..................................................571
   Achraf Ghorbel, Aurélie Lemaître, and Eric Anquetil
A Morphology Based Approach for Binarization of Handwritten Documents ..................................................577
   Vassilis Papavassiliou, Fotini Simistira, Vassilis Katsouros, and George Carayannis
Keyword Spotting Framework Using Dynamic Background Model ..................................................582
   Gaurav Kumar, Zhixin Shi, Srirangaraj Setlur, Venu Govindaraju, and Sitaram Ramachandrula
Text Line Extraction Using Adaptive Partial Projection for Palm Leaf Manuscripts from Thailand ..................................................588
   Rapeeporn Chamchong and Chun Che Fung
Effective Technique for the Recognition of Writer Independent Off-Line Handwritten Arabic Words .................................................................594
Sherif Abdel Azeem and Hany Ahmed

HMM Based Online Handwritten Bangla Character Recognition Using Dirichlet Distributions ..............................................................................600
Chandan Biswas, Ujjwal Bhattacharya, and Swapan Kumar Parui

Invited Talk II
Invited Lecture II: Evaluating the Probability of Identification in the Forensic Sciences ..................................................................................609
Sargur N. Srihari

Session 8 - Track I: Forensic Applications
From Terminology to Evaluation: Performance Assessment of Automatic Signature Verification Systems ..........................................................613
Muhammad Imran Malik and Marcus Liwicki

Role of Automation in the Examination of Handwritten Items .......................................................................................................................619
Sargur N. Srihari and Kirsten Singer

Off-Line Writer Verification Using Shape and Pen Pressure Information ........................................................................................................625
Manabu Okawa and Kenichi Yoshida

Session 8 - Track II: Historical Documents
Region Based Local Binarization Approach for Handwritten Ancient Documents .......................................................................................................633
Ines Ben Messaoud, Hamid Amiri, Haikal El Abed, and Volker Märgner

Layout Analysis for Arabic Historical Document Images Using Machine Learning ..............................................................................................639
Syed Saqib Bukhari, Thomas M. Breuel, Abedelkadir Asi, and Jihad El-Sana

Binarization of First Temple Period Inscriptions: Performance of Existing Algorithms and a New Registration Based Scheme ..............................645
Arie Shaus, Eli Turkel, and Eli Piasetzky

Poster Session C
A Wavelet-Based Descriptor for Handwritten Numeral Classification ........................................................................................................653
Leticia M. Seijas and Enrique C. Segura

A Neural Scheme for Procedural Motor Learning of Handwriting ........................................................................................................659
Rosa Senatore and Angelo Marcelli

New Advancements in Zoning-Based Recognition of Handwritten Characters ..................................................................................................665
D. Impedovo, G. Pirlo, and R. Modugno
