2012 Fifth International Conference on Intelligent Networks and Intelligent Systems
ICINIS 2012

Table of Contents

Message from the General Chair .......................................................................................................................... xii
Committee Lists ....................................................................................................................................................... xiii

Session 1: Image Processing and Analysis
Half Edge Collapse Mesh Simplification Algorithm Based on Constrained Quadric Error Metric Method (HECMSA-CQEM) for Model Simplification .............................................................. 1
  Yun Liu, Yun-Jia Wang, Yuan-Yuan Lin, Li-Zong Li, and Chun-Yan Qi
Laser Color Gamut Conversion Based on System Generator ................................................................................... 5
  Weihua Xing, Yizhong Yu, and Chao Xue
Car Plate Recognition System ................................................................................................................................ 9
  Dening Jiang, Tulu Muluneh Mekonnen, Tiruneh Embiale Merkebu, and Ashenafi Gebrehiwot
Compressed Sensing for Speech Processing Based on Wavelet Transform ............................................................. 13
  Xiong Xing, Cao Jihua, and Yuan Jinpeng
Applications and Solutions of Virtual Marine Environment Spatio-Temporal Visualization Service .......................... 17
  Li Zhao and Feng Yongxin
A Multi-scale Edge Detection Algorithm Based on Wavelet Transform ................................................................. 21
  Liu Dun and Yang Dong
Depth Camera in Human-Computer Interaction: An Overview .............................................................................. 25
  Yunxin Duan, Hu Deng, and Feng Wang
Image Mining by Data Compactness and Manifold Learning ................................................................................. 29
  Yuqing Song and Yaohui Li
Multi-feature Fusion for Video Object Tracking .................................................................................................. 33
  Yuqing Song and Dongpeng Yue
Graph Grammar Based License Plate Recognition .................................................................37
   Yuqing Song, Jianqing Liu, and Dianwei Li

Boundary Compactness for Data of 3D or Higher Dimensions .................................................41
   Yuqing Song and Lianshuan Shi

A License Plate Recognition Algorithm for Community Monitor ............................................45
   Lingxian Yang, Heping Chen, and Wei Zhang

**Session 2: Intelligence and Application**

The Design of Dinuclear Sewage Processor Based on the Nios II ........................................49
   Liu Lili, Yu Wanxia, and Wang Liqiang

Simulation Analysis for Impacts of Supply Disruption on Reverse Supply Chain .....................53
   Gu Qiaolun and Gao Tiegang

Low Sampling Rate Reconstruction of Medical Imaging: Application of Targeted Sampling Based on OMP ..........................................................57
   Yuan Jinpeng, Cao Jihua, and Xiong Xing

An Application of Ant Colony Optimization Algorithm in TSP ...............................................61
   Lin Yuanyuan and Zhang Jing

Behaviors of the Voltage Transducer in Harmonic Measurements and Its Automatic Calibration ........................................................................................................65
   Y.X. Feng, Genghuang Yang, Xuewen Ding, Wei Zhang, and Dening Jiang

Conversion from PLC Ladder Diagram to the Assembly Language Based on AOV Graph ...........................................................................................................69
   Ya-dan Bao, Xue-wen Ding, and Yan-min Song

New Multicolored Films Used in Full Color Display ..................................................................73
   Zhaoye Li and Zhaojun Xue

Route Optimization for R/M Integrated Supply Chain .............................................................76
   Sha Li, Qiao-Lun Gu, and Ying Zhou

SPMD Performance Analysis with Parallel Computing of Matlab ............................................80
   Jun-Jun Cao, Shan-Shan Fan, and Xuan Yang

Based on Credit Payments and Price Discount is the Optimal Inventory Model Metamorphic Goods ..............................................................................................84
   Zhenhe Lei and Ya-Bo Zhang

An Improved Multi-objective Genetic Algorithm Based on Agent ...........................................88
   Li Jia and Lianshuan Shi

An Efficient Adaptive Finite Element Analysis of Heterogeneous Materials Based on Centroid Material ...............................................................................92
   Meng Guan and Zhaocheng Xuan
The Hardware Design and Implementation of a Signal Reconstruction Algorithm Based on Compressed Sensing .................................................................96
  Guoyan Li, Junhua Gu, Qingzeng Song, Yicai Lu, and Bojun Zhou

Research on English Teaching Model Supported by Multimedia Technology .........................................................101
  Hongxing Wang

Multi-agent Genetic Algorithm Based on Self-Adaptive Operator .............................................................................105
  Lianshuan Shi and Huahui Wang

A Glowworm Swarm Optimization Algorithm with Improved Movement Rule .........................................................109
  Lifang He, Xiong Tong, and Songwei Huang

A Realization of Mutual Information Calculation on GPU for Semi-Global Stereo Matching .................................................................113
  Bin Chen and He-Ping Chen

Research on Subsystem Hybrid Scheduling and Priority Inversion Based uCOS-II .........................................................117
  Xibo Wang and Tao Liu

**Session 3: Network and Communication**

Smart Home Based on the ZigBee Wireless ...................................................................................................................122
  Liu Yan Hua and Zhang Ji Xiang

Trends in Host Search Attack in DNS Query Request Packet Traffic .............................................................................126
  Nobuhiro Shibata, Yasuo Musashi, Dennis Arturo Ludena Romana, Shinichiro Kubota, and Kenichi Sugitani

The Application of PROFIBUS Technology in the Fengchan River Project’s Electronic Control System Reform .........................................................................................130
  Juan Chen, Li Li, and Liqiang Wang

Research on Data Fusion and Data Mining Technology and Its Application in Wireless Sensor Network .................................................................134
  Chen Xianyi, Jin Zhigang, and Liu Jia

Study on Internet Congestion Control Algorithm ......................................................................................................138
  Kun Hao, Zhigang Jin, and Ping Hao

Hop-to-Hop Congestion Feedback Mechanism for Sink Bottleneck Problem in WSNs .................................................................142
  Meiyan Zhang, Wenyu Cai, and Liping Zhou

Design and Implementation of Web Server Control System Based on STM32 .............................................................................146
  Xian-Hui Li, Jing-Biao Liu, and Wen-Yu Cai

The Design of Web-Quest Teaching Platform Based on Curriculums .............................................................................150
  Hongfang Fan and Guangran Liu

A New Opportunistic Routing Mechanism Based on Partial Network Coding .................................................................154
  Kun Hao, Zhigang Jin, and Ping Hao

Network Traffic Prediction by Traffic Decomposition ..................................................................................................158
  Yongtao Wei, Jinkuan Wang, Cuirong Wang, and Junwei Wang
Session 4: Circuits Design and Computer Application

Research of Conversion Algorithm of Programmable Logic Controller Ladder Diagram to Assembly Language ................................................................. 162
Zhao Xinbo, Pei Zhijun, Wang Liqiang, and Su Zhenzhen Su

Research and Implementation of Embedded Soft PLC System ................................................................. 166
Ye Yin, Wang Jin, and Wang Liqiang

Design of a Step-Up/Step-Down k (=2,3,...)-Fibonacci DC-DC Converter Designed by Switched-Capacitor Techniques ................................................................. 170
Kei Eguchi, Satsuki Hirata, Motoki Shimoji, and Hongbing Zhu

A Survey on Human-Computer Interaction Technology for Financial Terminals ........................................... 174
Mengxing Zhang, Feng Wang, Hui Deng, and Jibin Yin

Research of Weak Signal Amplifier of Single Photon Counting ......................................................................... 178
Yang Dong

Design and Development of TTL-M-BUS Level Translator ............................................................................. 182
Yun-Tao Lei, Guang-Hui Li, and Li-Qiang Wang

The Research on Calculation of Temperature Field of Winding in Dry Type Transformer .................................... 185
Sheng-Wei Gao, Mu Zhang, Xing-Tao Sun, Chen-Hu Yuan, Ning Wang, and Xin Li

EEG Control of Music Player .......................................................................................................................... 189
Zhao Li and Guo Xuhong

The Minimum System Design Based on DSP TMS320C6713 ........................................................................... 193
Jian-Ming Hu, Jie Li, and Guang-Hui Li

Design of Control System with Free Pendulum Based on ATmega128 .......................................................... 196
Xue Wang and Li-Juan Hou

Automobile Anti-theft System Based on GSM and GPS Module ........................................................................ 199
Jian-Ming Hu, Jie Li, and Guang-Hui Li

Research on the Application of the Linear PID to the Thermal Medicine Filler ................................................. 202
Jie Zhao, Peng Zheng, Jianmin Fan, and Yuanqing Xue

Compact Bandpass Filter with Wide Upper-end Stopband .............................................................................. 206
Xing-Bing Ma and Hong-Xing Zheng

Simulation and Analysis of Surface Wave Based on Finite Element Method ...................................................... 209
Yang Lijian, Li Chunhua, Liu Mingming, and Gao Songwei

High-Speed and Portable Data Acquisition System Based on FPGA ............................................................ 213
Xiaoqiang Cao, Jun Zhang, Weitao Yao, and Mingye Ju

The Design of Variable Frequency Power Based on IGBT ............................................................................. 217
Jie Li, Guang-Hui Li, Li-Juan Hou, and Xiul Li Zhang
Session 5: Natural Language Processing

The Automatic Construction Method of Mongolian Lexical Semantic Network Based on WordNet ................................................................. 220
  Hasi and Nasun-Urt

The Design and Application of Mongolian Homograph Words Information Dictionary .............................................................. 224
  Hasi and Nasun-Urt

Automatic Extraction Method of Tibetan New Valid Words ........................................................................................................... 228
  Yuan Sun, Xiaodong Yan, Xiaobing Zhao, and Guosheng Yang

A Joint Approach for Building a Large Tibetan Corpus with Syntactic Parsing and Semantic Role Labeling ........................................ 232
  Lirong Qiu, Congjun Long, and Xiaobing Zhao

Tibetan Web Information Collection System ................................................................................................................................. 236
  Guixian Xu, Dunhao Zhong, Xu Gao, Yuan Lin, Xiaobing Zhao, and Guosheng Yang

A Method for Monitoring Sensitive Internet Information Based on Regular Expression ......................................................... 239
  Zhijuan Wang, Yuan Sun, Chang Wu, and Xiaobing Zhao

A Tibetan and Uygur Sensitive Word Automatically Add System Based on Co-occurrence ............................................................ 242
  Xiaodong Yan, Yuan Sun, Xiaobing Zhao, and Guosheng Yang

Study on the Construction of Corpus of University Emergency ........................................................................................................ 245
  Lu Qian and Zhao Xiaobing

Study on the Mongolian Transliteration Schemes for the Chinese Names ..................................................................................... 249
  Tong Laga and Xiaobing Zhao

Study on Recognition and Extraction Method of Contemporary Chinese Basic Vocabulary .................................................................................. 253
  Zhao Xiaobing and Tian Jiyuan

Data Acquisition Terminal Application Design and Development Based on the Android Platform ................................................... 257
  Yu Weng, Xiaokang Wang, Qelger, and Gui Ma

A Semantic Query Tool for Evaluation Expert Knowledge Base ...................................................................................................... 260
  Xiaoming Zhang, Hongxia Ma, and Dong Fu

Model of Data Gathering and Processing on Tibetan and Uyghur Language ............................................................................................ 264
  Yu Weng, Hanxin Jia, and Qingli Ma

Database Construction of Ethnic Minorities in Beijing ....................................................................................................................... 267
  Wan Yongyan

Research on Constructing a Traditional Knowledge Database Information System Based on ArcGIS Server .......................... 271
  Dai Rong, Xue Dayuan, Guo Luo, and Sun Faming
A Dictionary-based Multi-language Segmentation and Search Engine .................................................................275
  Weng Yu and Cheng Wenyi

Session 6: Assistive Engineering and Information Technologies

A New Method of Quantitative Rehabilitation Rating in Robot-Assisted Recovery System .................................................................278
  Lei Shi, Kun Jiang, Qiang Wang, and Zhen Liu

Morphology Algorithm Using Conspicuousness Map for Color Image Processing ..................................................282
  Lei Sheng, Kazuyoshi Yoshino, and Shanjun Zhang

Computerized Environment for People with Serious Disability ........................................................................286
  Chao Zhang, Haruo Nakashima, Motohoro Tanaka, Shunji Moromugi, and Takakazu Ishimatsu

A Medication Calendar to Assist Old People with Drug Dose ........................................................................290
  Joel Palomino, Haruo Nakashima, Shunji Moromugi, Takakazu Ishimatsu, Motohiro Tanaka, and Masayuki Honda

Proposal of Using Less Parameters to Build the Motion Model for Human Movements ..........................................294
  Zhu Yan and Kazuo Hemmi

Lip Contour Modeling Based on Active Shape Model ......................................................................................298
  Wang Lirong, Wang Jianlei, Xu Jing, and Sun Yi

Characteristic Point Match Algorithm Based on the SURF in Binocular Stereo Vision ........................................302
  Wang Xiaoli, Yang Lei, Wang Lirong, and Xu Jing

A Study of Face Motion Capture and Its Data Processing Technique Applied to the Speech Training of Hearing-impaired Children ........................................306
  Shi Lijuan, An Zhiyong, Zhao Jian, Wang Lirong, and Du Qinsheng

Research of Acoustic Emission Signal Preprocessing and Application in Hearing Impaired .........................................................310
  Qin Hongwu, Zhang Meng, and V.N. Ovcharuk

The Evaluation of Massage Skill of One-Finger Zen Based on Pressure Distribution Data ..................................................314
  Song Yajuan, Wang Lirong, Feng Ping, Xing Kai, Zhu Dexin, and Jing Hua

Research of Trajectory Planning for Mobility Assistance Robot Based on CKF ......................................................318
  Fucheng Cao, Yuanchun Li, and Lirong Wang

Research of Feature Extraction Method for Stroke Patients’ Surface Electromyography .......................................322
  Ren Liye, Wang Xiaoli, and Wang Xiao

Research on Artificial Landmark Recognition Method Based on Omni-Vision Sensor ........................................325
  Lei Yanmin, Wang Xiaoli, Ren Liye, and Feng Zhibin

Hadoop Based Data Processing Method and Its Application on Braille Identification ........................................329
  Nian-Feng Li, Li-Rong Wang, Meng Zhang, and Hua-Xun Zhang
Correct Motion Advice on Rehabilitation Instruction Robot by Superimposing Instructor CG Model .......................................................................................................................... 333
  Kazuyoshi Yoshino, Masafumi Kouda, and Shanjun Zhang

The Gait Analysis About the Elder Fall Risk .................................................................................................................. 337
  Zhang Meng and Qin Hongwu

Dynamic Extraction Method of 3D Parameters of Tongue for Pronunciation Recovery About Impaired Hearing Children .............................................................................................................. 340
  Zhao Jian, Shi Lijuan, Wang Lirong, Du Qinsheng, and Song Yajuan

Construction of Teaching Aids Network System for Higher Education of People with Visual Impairment ...................................................................................................................... 344
  Zhang Xiaomei, Liu Zhen, Zhao Gang, and Sun Yi

Motion Analysis and Research of Local Navigation System for Visual-Impaired Person Based on Improved LK Optical Flow .................................................................................................................. 348
  Zhao Gang, Wang Xiaoli, and Wang Lirong

Author Index .................................................................................................................................................................. 352
