# ICIS 2009

## Table of Contents

### Conference Information

---

### Agent Based Systems

- A Metric-Based Multi-Agent System for Software Project Management .................................................. 3  
  *Ching-seh Wu, Wei-chun Chang, and Ishwar K. Sethi*

- A Research of Cognitive Models for CGF in Tank Member ........................................................................ 9  
  *Qing Xue, Yang Wei, Zhiwu Tang, and Guohui Zhang*

- Distributed Feedback Mechanism for Just-In-Time Scheduling Problem .................................................. 15  
  *Wei Weng and Shigeru Fujimura*

- Modeling Instability in a New Framework of Interval Valued Process Algebra ....................................... 21  
  *Jie Zhou and Yixiang Chen*

### Algorithms

- A Heuristic Address Assignment Algorithm Based on Probability in a Network ....................................... 29  
  *Shu Wang and Changjia Chen*

- A Method for Dynamic Software Updating in Real-Time Systems ......................................................... 34  
  *Habib Seifzadeh, Ali Asghar Pourhaji Kazem, Mehdi Kargahi, and Ali Movaghar*

- A Multi-variable Algorithm for Placing Phi-nodes .................................................................................... 39  
  *Hongtu Ma, Rongcai Zhao, Ling Liang, and Xun Li*

- Searching Algorithm with Granularity Changing and the GNSS Integer Ambiguity Estimation .................. 44  
  *Xiaoping Chen and Rongle Kang*

- Analysis and Design of an Improved R-learning ....................................................................................... 48  
  *Wei Chen, Zhenkun Zhai, Xiong Li, and Jing Guo*
Effects of Suffix Repetition Rates of a String on the Performance of String Matching Algorithms .................................................................53
  Yang Wang

Improving and Extending SMR Technique for Solving Monotonic Problems ..........................................................59
  Atieh Mirshahvalad and Majid Noorhosseini

Maximizing the Accrued Utility of an Isochronal Soft Real-Time System Using Genetic Algorithms ..........................................................65

Multi-objective Optimization of Power Control and Resource Allocation for Cognitive Wireless Networks ..................................................70
  Yujun Bao, Hong Jiang, Yuqing Huang, and Rongchun Hu

Artificial Intelligence

A Novel Parameter Learning Algorithm for a Self-constructing Fuzzy Neural Network Design ..........................................................77
  Yuan YAO, Kailong Zhang, and Xinshe Zhou

A Route Planning Optimization Model Based on Improved Ant Colony Algorithm ..........................................................82
  Wang Yi-tao and Li Jin-jun

Adaptative Instructional Planning Using Workflow and Genetic Algorithms ..........................................................87
  Robson da Silva Lopes and Márcia Aparecida Fernandes

On Color Texture Generating Based on Simplified KIII Model ..........................................................93
  Chen Jian-zhou, Zhang Jin, Fang Chen, Zhao Li-juan, and Hans Liljenström

Optimal Design of Cognitive Radio Wireless Parameters based on Non-dominated Neighbor Distribution Genetic Algorithm ..........................................................97
  Jinghui Ma, Hong Jiang, Yongchun Hu, and Yujun Bao

Research of Knowledge-based Automatic Model Selection Strategy ..........................................................102
  Yanghe Feng and Chaofan Dai

Solving Global Unconstrained Optimization Problems by Symmetry-Breaking ..........................................................107
  Xiaohui Ji, Feifei Ma, and Jian Zhang

Bioinformatics and Geoinformatics

A Novel Approach Based on PCNNs Template for Fingerprint Image Thinning ..........................................................115
  Dacheng Xu, Bailiang Li, and Anton Nijholt

A Parallel Algorithm for Computer Simulation of Electrocardiogram Based on MPI ..........................................................120
  Wenfeng Shen, Weijia Lu, Daming Wei, Weimin Xu, Xin Zhu, and Shizhong Yuan

Entropy-based Criteria Dealing with the Ties Problem in Gene Selection ..........................................................124
  Feng Yang and K.Z. Mao
Exploring the Spatial Distribution of Bird Habitat with Cluster Analysis ...................................................... 130
  MingJie Tang, YuanChun Zhou, Peng Cui, HaiTing Zhang, LiangL Hu, YuanSheng Hou, and BaoPing Yan
Parallelizing the Protein Threading Problem in a Hybrid Peer-to-Peer Based High Performance Computing Platform ................................................................. 136
  Fei Luo and Lin Chen
Protein Secondary Structure Prediction Using Large Margin Methods ................................................................. 142
  Tang Buzhou, Wang Xuan, and Wang Xiaolong

Communication Systems & Networks
A Max-plus Network Calculus ................................................................................................................................. 149
  Baohua Fan, Heying Zhang, and Wenhua Dou
A New Suggestion for Data Clustering .......................................................................................................................... 155
  Sunil Bhooshan, Vinay Kumar, Gaurav Gayawar, Sah Geetansh Krishna, and Kapil Sachdeva
A Novel NAT Traversal Mechanism in the Heterogeneous Environment .................................................................. 161
  Bo Wang, Xiangmin Wen, Sun Yong, and Zhen Wei
An Efficient Search Algorithm for REIK Overlay Network .......................................................................................... 166
  Jingjing Song, Jiguoo Yu, and Zhaojun Xiang
Application of Security Ontology to Context-Aware Alert Analysis .............................................................................. 171
  Hui Xu, Debao Xiao, and Zheng Wu
Detection Probability Analysis of Cooperative Spectrum Sensing in Rayleigh Fading Channels ............................................................... 177
  Jia Zhu and Baoyu Zheng
Fast Reroute upon Multi-homed Domains Link Failures .............................................................................................. 183
  Hailong Ma, Yunfei Guo, and Jianwei Zhang
HPRP: Hierarchical Probabilistic Routing Protocol for Wireless Mesh Network ............................................................................. 188
  Rui Zhang
Improved DCCP Congestion Control for Wireless Sensor Networks ............................................................................. 194
  Liu Yong-Min, Jiang Xin-Hua, Nian Xiao-Hong, and Lu Wu-Yi
Model-Driven Dependability Analysis of Virtualization Systems ................................................................................... 199
  Xu Zhang, Chuang Lin, and Xiangzhen Kong
Modeling of Hybrid-service in Broadband Wireless Communication System ............................................................. 205
  Xiaowei Qin, Leixin Mai, and Xuchu Dai
New Smith Predictor and FRBF Neural Network Control for Networked Control Systems ..................................................... 210
  Wencai Du and Feng Du
Performance Analysis of Cognitive Radio Networks against Secondary User’s Policies ...................................................... 216
  Min Zhang, Shengming Jiang, Gang Wei, and Hongjiang Wang
Performance Analysis of IEEE 802.11 DCF in Multi-hop Ad Hoc Networks ..............................................222

Liying Xie, Gang Wei, Hongjiang Wang, and Zaijin Xie

Polynomial Time Construction Algorithm of BCNC for Network Coding in Cyclic Networks ..........................................................................................................................................................228

Jiaqing Huang, Liang Wang, Wenqing Cheng, and Hui Li

Quality of Protection with Performance Analysis in IP Multimedia Subsystem ...........................................234

Kai Wang, Chuang Lin, and Fangqin Liu

Research on Optimizing Embedding Space Dimension in Network Coordinate System .................................................................240

Changyou Xing and Ming Chen

Computer Architecture and VLSI

A Fault Tolerant Bufferless Optical Interconnection Network ..........................................................................................................................249

Qi Xingyun, Feng Quanyou, Chen Yongran, Dou Qiang, and Dou Wenhua

A New Adaptive Flow Control for Mesh-based Network-on-Chip (NoC) .....................................................255

Minghua Tang and Xiaola Lin

Efficient Approximate Algorithm for Hardware/Software Partitioning ..........................................................261

Wu Jigang, Ting Lei, and Thambipillai Srikantan

Efficient Heuristic Algorithm for Rapid Custom-Instruction Selection ...........................................................................266

Tao Li, Wu Jigang, Siew-Kei Lam, Thambipillai Srikantan, and Xicheng Lu

Floating-point to Fixed-point Transformation Using Extreme Value Theory ...............................................271

Linsheng Zhang, Yan Zhang, and Wenbiao Zhou

Transaction Level Modeling for Early Verification on Embedded System Design ..........................................................277

Maman Abdurohman, Kuspriyanto K., Sarwono Sutikno, and Arif Sasongko

Computer Security

A New Anomaly Detection Method Based on Rough Set Reduction and HMM ..................................................285

Fanping Zeng, Kaitao Yin, Minghui Chen, and Xufa Wang

High-Availability Decentralized Multi-Agent Key Recovery System ........................................................290

Kanokwan Kanyakamee and Chanboon Sathitwiriyawong

Lightweight Public Key Infrastructure and Service Relation Model for Designing a Trustworthy ONS ...........................................................................295

Jing Sun, Huiqun Zhao, Huibing Xiao, and Gongzhu Hu

Object-oriented Case Representation and Its Application in IDS ......................................................................301

Qian Quan, Zhang Rui, and Che Hong-Yi

Security Enhancing Compiler for Localization Schemes in Pervasive Sensor Networks ....................................307

Ji Young Chun, Yong Ho Kim, Jung Yeon Hwang, and Dong Hoon Lee

Strongly Unforgeable Signature Scheme without One-Time Key ........................................................................313

Watcharee Tantikittipisut and Nol Premasathian
Transmission Performance Simulation of Broadcast Encryption Schemes with Pay-TV System Implementation Consideration ........................................................................................................... 317
Yichun Zhang and Jinliang Wan

Users' Behavior Character Analysis and Classification Approaches in Enterprise Networks ........................................................................................................................................... 323
Tao Qin, Xiaohong Guan, Yi Long, and Wei Li

Data Mining & Knowledge Discovery

An Efficient Algorithm to Mine Unordered Trees .......................................................................................................................... 331
Yun Li, Xin Guo, Yunhao Yuan, Jia Wu, and Ling Chen

A General Framework: Combining Statistical Models and Network Structure for Deep Content Mining ........................................................................................................................................ 337
Chengli Zhao, Xue Zhang, and Dongyun Yi

Application of Gray Level Variation Statistic in Gastroscopic Image Retrieval .................................................................................. 342
Chengyu Wu and Xiaoying Tai

Challenges for Sentence Level Opinion Detection in Blogs .................................................................................................................. 347
Malik Muhammad Saad Missen, Mohand Boughanem, and Guillaume Cabanac

Extracting Relations from Chinese Web Documents Using Kernel Methods .......................................................................................... 352
Jing Qiu and Lejian Liao

Feature Selection Algorithm Based on Association Rules Mining Method .......................................................................................... 357
Jianwen Xie, Jianhua Wu, and Qingquan Qian

Feature-Based Data Stream Clustering ............................................................................................................................................... 363
Mohsen Jafari Asbagh and Hassan Abolhassani

Hidden Topic Analysis Based Formal Framework for Finding Experts in Metadata Corpus .......................................................................................................................... 369
Hao Wu, Yijian Pei, and Jiang Yu

Identifying Structures with Informative Dimensions in Streams .................................................................................................................. 375
Vasudha Bhatnagar, Sharanjit Kaur, and Neelima Gupta

Incremental Naive Bayesian Spam Mail Filtering and Variant Incremental Training ........................................................................................................ 383
Phimphaka Taninpong and Sudsanguan Ngamsuriyaroj

Integrating Search and Sharing: User-Centric Collaborative Information Seeking .......................................................................................... 388
Roman Y. Shtykh and Qun Jin

MVGL Analyser for Multi-classifier Based Spam Filtering System ........................................................................................................ 394
Md Rafiquel Islam, Wanlei Zhou, and Morshed U Chowdhury

PLSA-Based Query Expansion .......................................................................................................................................................................................... 400
Li Wei-jiang, Zhao Tie-jun, and Zang Wen-mao

Radius-Distance Based Semi-Supervised Algorithm .................................................................................................................. 406
Zheng-Hua Qi, Geng Yang, and Xun-Yi Ren
Study on Hydrology Time Series Prediction Based on Wavelet-neural Networks ................................................................. 411
   Zhu Yuelong, Qian Jihong, Fan Qingsong, Wan Dingsheng, and Li Shijin

Temporal Pattern Recognition in Video Clips Detection ................................................................. 416
   Aihua Zheng, Jixin Ma, Bin Luo, Miltos Petridis, Sulan Zhai, and Jin Tang

Using Hoarding to Increase Availability in Shared File Systems ........................................ 422
   Jochen Hollmann and Per Stenström

Weight Balanced Linear Programming SVM on Skewed Distribution and its Evaluation ........ 430
   Yuxiang Mao and Daming Wei

Database, Data Warehousing, Data Engineering

Autonomic Success in Database Management Systems ................................................................. 439
   Basit Raza, Abdul Mateen, Tauqeer Hussain, and M.M. Awais

Autonomicity in Universal Database DB2 .............................................................................. 445
   Abdul Mateen, Basit Raza, Tauqeer Hussain, and M.M. Awais

Cluster Based Partition for Multi-dimensional Range Query in DAS Model ...................... 451
   Wang Jieping and Du Xiaoyong

Efficient Processing of XML Twig Queries with All Predicates ........................................... 457
   Xiaoshuang Xu, Yucai Feng, and Feng Wang

Exhaustive Greedy Algorithm for Optimizing Intermediate Result Sizes of Join Queries ........................................................................ 463
   Areerat Trongratsameethong and Jarernsri L. Mitrpanont

On the Soundness Property for SQL Queries of Fine-grained Access Control in DBMSs ........................................................................ 469
   Jie Shi, Hong Zhu, Ge Fu, and Tao Jiang

Querying Heterogeneous Relational Database using SPARQL ............................................ 475
   Jinpeng Wang, Zhuang Miao, Yafei Zhang, and Bo Zhou

Distributed Computing

A Model-Driven Approach for Generating Business Processes and Process Interaction Semantics ........................................................................ 483
   Chenting Zhao, Zhenhua Duan, and Man Zhang

A Novel Fault-tolerant Particle Swarm Optimization Scheduler for Scheduling Independent Task in Grid Computing Environment ........................................................................ 489
   Mehdi Nikkhah, Mohammad Hosein Yektaie, Amir Masoud Rahmani, and Mohammad Nikkhah

A Novel Trust Model Based on Bayesian Network for Service-Oriented Grid ........................................................................ 494
   Changsong Ding, Yi Fu, Zhigang Hu, and Peng Xiao

Algorithms for Scheduling Distributed Tasks of Ordered Communication on a Realistic Model of Heterogeneous Grids ........................................................................ 500
   Cho-Chin Lin and Chih-Hsuan Hsu
Enabling Grid Interoperability by Extending HPC-driven Job Management with an Open Standard Information Model .......................................................... 506

Shahbaz Memon, Morris Riedel, Shiraz Memon, Achim Streit, and Felix Wolf

Scientific Workflow Model for Provenance Analysis Based on Many-sorted High-Level Nets ................................................................. 512

Ning Li and Jinqiang Hu

Triplet Based Multi-core Interconnection Network and its Computational Efficiency .................................................................................. 516

Haroon-Ur-Rashid, Shi Feng, and Ji Wei Xing

Economic and Financial Systems

Bayesian Inference on QGARCH Model Using the Adaptive Construction Scheme ................................................................. 525

Tetsuya Takaishi

Comparing the Feature Selection Using the Distributed Non-overlap Area Measurement Method with Principal Component Analysis .............................................. 530

Sang-Hong Lee, Dong-Kun Shin, Zhen-Xing Zhang, and Joon S. Lim

ERP Systems Development: Enhancing Organization’s Strategic Control through Monitoring Agents ................................................................. 535

Fabio Mulazzani, Barbara Russo, and Giancarlo Succi

Model Concept to Determine the Optimal Maturity of IT Service Management Processes .............................................................................. 543

Jan-Helge Deutscher and Carsten Felden

On the Singularity of Valuating IT Security Investments ........................................................................................................... 549

Thomas Neubauer and Christian Hartl

Image Processing & Pattern Recognition

A Max Modular Support Vector Machine and Its Variations for Pattern Classification ............................................................................................... 559

Hui-cheng Lian

A Method for Removing the Impulse in Image Processing ........................................................................................................... 565

Lijie Zhang and Haili Yin

A Motion Attention Model Based Rate Control Algorithm for H.264/AVC ........................................................................................................... 568

Zhi Liu, Hongbo Yan, Liquan Shen, Yongfang Wang, and Zhaoyang Zhang

A Noise Insensitive Cluster Validity Measure for Pattern Classification ........................................................................................................... 574

Gang Chen, Xiaoyong Guo, and Tai Hu

An Image Encryption Algorithm Based on N-Dimension Affine Transformation ........................................................................................................... 579

Fangchao Wang, Sen Bai, Guibin Zhu, and Zhenghui Song

Border Detection and Cancer Propagation on Spectral Bands of Malignant Melanoma Using Six Sigma Threshold ........................................................................................................... 586

Gopalakrishnan Sethumadhavan and Srinivasan Sankaran
Efficient Video Watermarking Using Motion Estimation Approach ..............................................................593
  Aree Ali Mohammed and Jamal Ali Hussein
Dynamic Background Modeling for Foreground Segmentation .................................................................599
  Shaoqiu Xu
Fingerprint Skeleton Extraction Based on Improved Principal Curve ........................................................605
  Chi Ma, Hongyun Zhang, Duoqian Miao, and XueDong Zhang
Salient Object Extraction Based on Region Saliency Ratio ........................................................................611
  Zhongmin Han, Zhi Liu, Zhaoyang Zhang, Yu Lu, Weimei Li, and Hongbo Yan
Selecting Relevant EEG Signal Locations for Personal Identification Problem Using ICA and Neural Network ..........................................................................................................................616
  Preecha Tangkraingkij, Chidchanok Lursinsap, Siripun Sanguansintukul, and Tayard Desudchit
Technique of Large-scale Image Set Construction Based on Web Image Searching Engine .........................................................622
  Ran Li, Weiguang Xu, Jianjiang Lu, Yafei Zhang, and Zining Lu
Three-Dimensional Reconstruction Using Enhanced Shape from Stereo Technique ............................................627
  Osama Hosam and Xingming Sun

Information Science and Systems
A General Attack against Several Group Signatures .........................................................................................635
  Zhengjun Cao and Lihua Liu
A Hybrid Branch-and-Bound Strategy for Hardware/Software Partitioning .................................................641
  Wu Jigang, Baofang Chang, and Thambipillai Srikanthan
A Note on the Upper Bound of Dimension of Bivariate Spline Space over Triangulation .................................................................645
  Lijuan Chen, Aiqing Wang, and Mingzhu Li
An Efficient Fusion Algorithm on Conflicting Evidence ..............................................................................650
  Jinyuan Yang, Xinhan Huang, and Min Wang
Dynamic Routing Strategies Based on Local Topological Information of Scale-free Network .................................................................655
  Wei Shi and Zheng Zhao
Facial Metrical and Caricature-Pattern-Based Learning in Neural Network System for Face Recognition ..............................................................................................................................660
  Jakarin Smitaveja, Kingkarn Sookhanaphibarn, and Chidchanok Lursinsap
Performance Analysis of Generalized Well-formed Workflow .................................................................666
  Zuoxian Nie, Xin-hua Jiang, Jian-cheng Liu, and Hai-yan Yang
Research on Numerical Module Identification Approaches ........................................................................672
  Quan Shan and Yan Chen
The Game Analysis of Price Competition on Different Rationality ..................................................................677
  Bin Wang, Zhimin Li, Silian Sui, and Yuhua Qin
Intelligent Control Systems

Animating the Brush-writing Process of Chinese Calligraphy Characters .................................................. 683
   Lijie Yang and Xiaoshan Li
Rule-Based Publish-Subscribe Mechanism for Real-time Applications ...................................................... 689
   Xin Li, Zhiping Jia, Xinjie Lu, and Haiyang Wang
Spatial Navigation with Consistency Maintenance System ............................................................................. 695
   Toshiyuki Maeda
Study of Intelligent Control System for Ship Autopilot Design .................................................................... 701
   Wang Minghui, Yu Yongquan, and Zeng Bi
Symbolic Reachability Computation of a Class of Nonlinear Systems .......................................................... 706
   Ming Xu, Liangyu Chen, and Zhi-bin Li

Internet Technology and Applications, e-Commerce

A Common Acquaintance Immunization Strategy for Complex Network ................................................... 713
   Pan Liu, Huaikou Miao, and Qing Li
Autogeneration of Database Applications from XML Metadata for Web-Based Data Entry ................................ 718
   Kexiao Liao, Peter Kisuule, John Ehrlinger, and Jie Dai
BackupIT: An Intrusion-Tolerant Cooperative Backup System .................................................................. 724
   Sérgio Raymundo Loest, Marcelo Cheminn Madruga, Carlos Alberto Maziero,
   and Lau Cheuk Lung
Bloggers’ Social Presence Framing and Blog Visitors’ Responses ................................................................. 730
   Hsiu-Ju Chen
Building the Semantic Relations-Based Web Services Registry through Services Mining ................................ 736
   Shizhan Chen, Zhiyong Feng, Hui Wang, and Tao Wang
Research on Fault-tolerant Mechanism of Integrating Water-Domain Oriented Computing Resources .............. 744
   Ling Shang, Zhijian Wang, Xiaohong Zhang, Junjie Wang, and Zhizhong Liu
Monitoring End-to-End Quality of Service in a Video Streaming System ..................................................... 750
   Lassi Lehikoinen and Tomi Räty
The Design and Realization of Unicode Based Minorities Character Online Processing System ...................... 755
   Kurban Ubul, Askar Hamdulla, Winira Musajan, Abdiryim Raxidin, and Patigul Mamat

Mobile/Wireless Computing

A MAC Protocol for Cooperative Wireless Networks ..................................................................................... 763
   Kefei Lu, Xiaodong Cai, and Xudong Wang
An Efficient Replica Location Method in Hierarchical P2P Networks .............................................................. 769
   Xin Sun, Kan Li, and Yushu Liu
An Energy Efficient MAC Protocol for WSNs ................................................................. 775
Zheng Guan and Dongfeng Zhao

Jun Yang, Deyun Zhang, and Yunyi Zhang

Cross-Layer Service Discovery Using Multi-Path for Wireless Environments ................... 786
Moon Jeong Kim and Young Ik Eom

Degradation of MIMO UWB-IR Transceiver in Poisson Models .................................... 791
Xu Huang

Genetic Algorithm Based Length Reduction of a Mobile BS Path in WSNs ....................... 797
Liang He, Jingdong Xu, Yuntao Yu, Miao Li, and Wenyao Zhao

Implementation of Geocast Enhanced AODV-UU in Linux Testbed ................................. 803
Muhammad Asim Mubarik, Shoab Ahmad Khan, Syed Ayad Hassan, and Naveed Sarfraz

New Delay Optimum Quasi-Orthogonal Space-Time Block Codes with Full Spatial Diversity ................................................................. 808
Changhyeon Chae, Hyunae Min, Junho Kim, and Taejin Jung

Novel Protocol and Its Implementation QKD in Wi-Fi Networks ........................................ 812
Xu Huang, Shirantha Wijesekera, and Dharmendra Sharma

ODMRP-LR: ODMRP with Link Failure Detection and Local Recovery Mechanism ................ 818
Marjan Naderan-Tahan, Amir Darehshoorzadeh, and Mehdi Dehghan

Packet Loss Pattern and Parametric Video Quality Model for IPTV ................................. 824
Fenghua You, Wei Zhang, and Jun Xiao

Reducing Web Latency in Mobile Network ....................................................................... 829
Xiaohui Chen, Weidong Wang, and Guo Wei

Throughput Analysis of Wireless Multi-hop Chain Networks .............................................. 834
Fangqin Liu, Chuang Lin, Hao Wen, and Peter Ungsunan

Transaction of Service Composition in Pervasive Computing and Its Correctness Analysis Based on ASM ................................................................. 840
Ruonan Rao, Jiankun Wu, Dejun Wang, and Linpeng Huang

Ubiquitous Services for Senior Citizens - Living Process Detection and Middleware ............ 846
Antero Metso, Petri Pulli, Seamus Hickey, and Xiaoshong Zheng

ZD-AOMDV: A New Routing Algorithm for Mobile Ad-Hoc Networks .......................... 852
Nastooh Takeri Javan, Reza Kiaieifar, Bahram Hakhamaneshi, and Mehdi Dehghan

Parallel and Distributed Computing & Systems

An Eliminating Causal Ambiguity Approach to Reactive Systems ...................................... 861
Houguang Yue

Detecting Race Conditions in One-Sided Communication of MPI Programs ....................... 867
Mi-Young Park and Sang-Hwa Chung

Research on Test Suite Reduction Using Attribute Relevance Analysis ..............................................................961
    Fanping Zeng, Ling Li, Juan Li, and Xufa Wang

Risky Module Estimation in Safety-Critical Software ...........................................................................................................967
    Young-Mi Kim, Choong-Heu Jeong, A-Rang Jeong, and Hyeon Soo Kim

Service Discovery and Substitution According to Inheritance of Behavior with Invariant Analysis ..................................................................................................................971
    Jidong Ge, Hao Hu, and Jian Lü

Simplifying Buffer Overflow Detection Using Site-Safe Expressions ..........................................................................................977
    Shikun Chen and Zhoujun Li

Software Development Process Monitoring Based on Nominal Transformation ..................................................983
    Fengyu Zhao, Xin Peng, and Wenyun Zhao

Software Reliability Assurance Using a Framework in Weapon System Development: A Case Study .................................................................989
    Dalju Lee, Jongmoon Baik, and Ju-Hwan Shin

Study on the Automatic Test Framework Based on Three-tier Data Driven Mechanism ............................................................................................................................996
    Tao Wu, Yanling Wan, Yishan Xi, and Chuanbo Chen

Software Reuse, Design Patterns

Development Based on MDA, of Ubiquitous Applications Domain Product Lines .................................................................................................................................1005
    Raphael Pereira de Oliveira, Antonio Francisco do Prado, Wanderley Lopes de Souza, and Mauro Biajiz

Software Testing and Tools

A Systematic Framework for Grammar Testing ..........................................................................................................................1013
    Lixiao Zheng and Haiming Chen

Validating Requirements Model of a B2B System .........................................................................................................................1020
    Yin Ling, Liu Jing, and Li Xiaoshan

Techniques for Specification, Verification and Validation

Model Checking Service Component Composition by SPIN ...........................................................................................................1029
    Zuohua Ding, Mingyue Jiang, and Jing Liu

Model Checking UML Activity Diagrams in FDR ..........................................................................................................................1035
    Dong Xu, Huaikou Miao, and Nduwimfura Philbert

On the Capability Compliance of Annotated Process Model ...........................................................................................................1041
    Ping Gong and Keqing He
UML, OO Modeling & Simulation

A Coverage-Driven Constraint Random-Based Functional Verification .................................................. 1049
Yingpan Wu, Lixin Yu, Wei Zhuang, and Jianyong Wang

A Study of Matrix Data on Reading and Writing Method in Simulation .................................................... 1055
Wang Lei and Lu Xianliang

Visual and Multimedia Computing

A 5-Parameter Bundle Adjustment Method for Image Mosaic .......................................................... 1063
Xianyong Fang, Bin Luo, Haifeng Zhao, and Yiwen Zhang

A Framework for Real-time Local Free-Form Deformation .......................................................... 1068
Jiacheng Li, Gengliang Wang, and Yue Chen

A General 3D Campus Navigator System ....................................................................................... 1074
Jing Wang and Zhi Lin

A Logical and Graphical Operation of a Graph-Based Data Model .................................................. 1079
Teruhisa Hochin and Hiroki Nomiya

A Novel Rate Control Scheme for H.264/AVC Based on Scene Change ........................................... 1085
Kan Chang, Bo Yang, and Juan Luo

Adding SVC Spatial Scalability to Existing H.264/AVC Video ......................................................... 1090
Ravin Sachdeva, Sumit Johar, and Emiliano Piccinelli

Dealing with Telephone Fraud Using CAPTCHA ............................................................................. 1096
Hua Zhang, Xiangming Wen, Peizhou He, and Wei Zheng

Depth Adaptive Video Stitching ........................................................................................................ 1100
Wei Zeng and Hongming Zhang

Efficient Estimation of Multiple Illuminant Directions Using C-means .......................................... 1106
Jintao Ma, Yu Zhou, Qun Hao, and Yang Zhang

Image Inpainting Algorithm Based on Successive Elimination ...................................................... 1111
Ranran Zhang, Youdong Ding, and Shuhan Wei

Point Matching Estimation for Moving Object Tracking Based on Kalman Filter .......................... 1115
Wei Zeng, Guibin Zhu, and Yao Li

SaViT: Technique for Visualization of Digital Home Safety .......................................................... 1120
Pushpa Kumar, Nary Subramanian, and Kang Zhang

Shot Boundary Detection and Keyframe Extraction Based on Scale Invariant Feature Transform ........ 1126
Gentao Liu, Xiangming Wen, Wei Zheng, and Peizhou He

Texture Retrieval by Scale and Rotation Invariant Directional Empirical Mode Decomposition ........ 1131
Mingliang Hou, CunHua Li, and Yong Zhang
Web Engineering & Applications

A SAM-Based Evolution Model of Ontological User Model .........................................................1139
   Jianguo Pan, Bofeng Zhang, and Gengfeng Wu

A Web Service Adapter with Contract-Oriented Methodology ..................................................1144
   Junhuai Li, Yile Wang, Jing Zhang, and Zhuobin Zhang

A Web Service Composition Method Based on Interface Matching .............................................1150
   Tao He, HuaiKou Miao, and Liping Li

Analyzing Reliability of Time Constrained Service Composition .............................................1155
