8th International Workshop on Program Comprehension

June 10-11, 2000
Limerick, Ireland

Sponsored by the IEEE Computer Society Technical Council on Software Engineering
Proceedings

IWPC 2000

8th International Workshop on Program Comprehension

June 10–11, 2000
Limerick, Ireland

Sponsored by
IEEE Computer Society Technical Committee on Software Engineering

Los Alamitos, California
Washington • Brussels • Tokyo
# Table of Contents

8th International Workshop on Program Comprehension

Message from the General Chair ................................................................. viii
Message from the Program Co-Chairs ...................................................... ix
Organizing Committee ............................................................................... x
Program Committee .................................................................................. xi

Keynotes
Comprehending by Varying Focal Distance ............................................... 3
  R. Mittermeier
Program Comprehension and Software Migration Strategies ................... 5
  H. Müller

Session 1: Software Quality Analysis
Understanding the Sources of Software Defects: A Filtering Approach .......... 9
  C. Wohlin, M. Höst and M. Ohlsson
Automated Quality Analysis of Component Software for Embedded Systems ... 18
  J. Jahnke, J. Niere and J. Wadsack
Understanding Some Software Quality Aspects from Architecture and Design
  Models ........................................................................................................ 27
  L. Bratthall and C. Wohlin

Session 2: Architecture Recovery
A Pattern Matching Framework for Software Architecture Recovery and
  Restructuring ............................................................................................ 37
  K. Sartipi, K. Kontogiannis and F. Mavaddat
Architectural Repair of Open Source Software .......................................... 48
  J. Tran, M. Godfrey, E. Lee and R. Holt
Architectural Level Hypothesis Testing through Reverse Engineering of
  Object-Oriented Software ........................................................................ 60
  S. Counsell, P. Newson and E. Mendes

Session 3: Reverse Engineering
A Formalism to Automate Mapping from Program Features to Code .......... 69
  J.-C. Deprez, A. Lakhotia
Tracing Object-Oriented Code into Functional Requirements .................. 79
  G. Antoniol, G. Canfora, G. Casazza, A. De Lucia and E. Merlo
Evaluating the Accessor Classification Approach to Detect Abstract Data
  Types ......................................................................................................... 87
  J.-F. Girard and M. Würthner
Session 4: Tools and Environments

Program Comprehension through Multiple Simultaneous Views: A Session
With VinEd ................................................................. 99
  J. Sajaniemi
Smiley—An Interactive Tool for Monitoring Inter-Module Function Calls...................................... 109
  N. Goldman
Requirements for an Elucidative Programming Environment......................................................... 119
  K. Nørmark

Session 5: Program Comprehension Studies

Program Comprehension Techniques Improve Software Inspections: A Case Study .................... 131
  S. Rifkin and L. Deimel
Direction and Scope of Comprehension-Related Activities by Procedural and
  Object-Oriented Programmers: An Empirical Study ................................................................. 139
  C. Corritore and S. Wiedenbeck
An Exploratory Case Study of the Maintenance Effectiveness of Traceability Models......................... 149
  A. Bianchi, A. Fasolino and G. Visaggio

Session 6: Metrics and Slicing

An Empirical Study of Amorphous Slicing as a Program Comprehension
  Support Tool................................................................................................................................. 161
  D. Binkley, M. Harman, I. Raszewski and C. Smith
Metric-Based Analysis of Context-Free Grammars ........................................................................ 171
  J. Power and B. Malloy
Source Animation as a means of Program Comprehension for Object-Oriented
  Systems......................................................................................................................................... 179
  H. Sneed

Session 7: Clustering Techniques

The Effect of Call Graph Construction Algorithms for Object-Oriented
  Programs on Automatic Clustering ............................................................................................... 191
  D. Rayside, S. Reuss, E. Hedges and K. Kontogiannis
A Framework for Experimental Evaluation of Clustering Techniques ........................................... 201
  R. Koschke and T. Eisenbarth
On the Stability of Software Clustering Algorithms ........................................................................ 211
  V. Tzerpos and R. Holt
Session 8: Concept Analysis

Types and Concept Analysis for Legacy Systems ........................................ 221
  T. Kuipers and L. Moonen

A Comparison of Graphs of Concept for Reverse Engineering ................... 231
  N. Anquetil

Case Study of Feature Location Using Dependence Graph ......................... 241
  K. Chen and V. Rajlich

Working Sessions

Identification of Lower-Level Artifacts .................................................. 253
  G. Antoniol, G. Casazza and E. Merlo

  M. Petre

Tools for Program Comprehension: Building a Comprehender’s Workbench ........ 255
  K. Gallagher

Understanding Program Understanding .................................................... 256
  F. Balmas, H. Wertz and J. Singer

Author Index .......................................................................................... 257
