This year ICTAI highlights once again a special track on Boolean satisfiability (SAT) and constraint satisfaction programming (CSP) technologies. SAT and CSP-based technologies have become major topics of research and application in AI during this past decade, opening up new perspectives about effective AI application domains.

ICTAI has long been a major forum for the CSP and SAT research communities for presenting new high-quality results. The special track is intended to further develop the role of ICTAI in that respect. Its focus is on the cross-fertilization between these two very close active research areas.

All papers submitted to the special track were thoroughly reviewed by at least three different members of the special track Program Committee, followed by a response/rebuttal period. As a result, 17 full regular papers were accepted.

We are very grateful to all the program committee members and additional reviewers who made a tremendous effort to allow this very exciting program to be set up.

Enjoy!

Éric Grégoire and Jean-Marie Lagniez
Co-Chairs of the SAT/CSP Special Track at IEEE ICTAI 2015
