Contents

Proceedings of the 2006 International Conference on Intelligent Information Hiding and Multimedia Signal Processing

IIH-MSP 2006

Preface .................................................................................................................................................................. xv
Organizing Committee ............................................................................................................................... xvi–xxii

Session A1: New Data Hiding and Secreting Techniques for Sound Signals

Spread Spectrum Audio Steganography Using Sub-band Phase Shifting................................................................. 3
  Hosei Matsuoka
Data Hiding in Speech Sounds Using Subband Amplitude Modulation Robust against Reverberations and Background Noise........................................................................................................ 7
  Akira Nishimura
A Method of High Bit-Rate Data Hiding in Music Using Spline Interpolation.......................................................... 11
  Ryuta Fujimoto, Mamoru Iwaki, and Tohru Kiryu
Information Hiding on Lossless Data Compression .................................................................................................... 15
  Katsunari Yoshioka, Kotaro Sonoda, Osamu Takizawa, and Tsutomu Matsumoto
Multiple Description Coding of an Audio Stream by Optimum Recovery Transform ........................................ 19
  Akinori Ito and Shozo Makino
Audio Watermark Enhanced by LDPC Coding for Air Transmission.................................................................. 23
  Yôiti Suzuki, Ryouichi Nishimura, and Hao Tao
A Novel Audio Watermarking in Wavelet Domain................................................................................................ 27
  Ming Li, Yun Lei, Jian Liu, and Yonghong Yan
Channel Capacity Analysis of Spread Spectrum Audio Watermarking for Noisy Environments ..................... 33
  Saeed Sedghi, Morteza Khademi, and Nedeljko Cvejic
Audio Watermarking Based on Reverberation ..................................................................................................... 37
  Gui-jun Nian, Zhiyuan Xie, and Shu-xun Wang
Digital Audio Watermarking Algorithm Based on Quantizing Coefficients ..................................................... 41
  Zhao Xu, Ke Wang, and Xiao-hua Qiao

Session A2: Digital Watermarking (I)

A Subsampling and Quantization Based Watermarking Scheme Resisted the Permutation Attacking ............. 47
  Chia An Huang, Jeng-Shyang Pan, Te-hui Kuo, Jaw-Shyang Wu, and Chuang Lin
An Information Hiding Scheme for OFDM Wireless Networks ........................................................................ 51
  Chuang Lin, Jeng-Shyang Pan, Chin-Shiu Shieh, and Peng Shi
A Self-Adaptive Image Encryption Algorithm Based on Composite Discrete Chaotic System

Sheng-bing Che, Da Huang, and Guang Li

Chain Code Distribution-Based Image Retrieval

Junding Sun and Xiaosheng Wu

Lung Cancer Diagnosis System Based on Support Vector Machines and Image Processing Technique

Kewen Xia, Guan Xu, and Naixun Xu

A Novel Through-Wall Imaging Method Using Ultra WideBand Pulse System

Lin Ma, Zhongzhao Zhang, and Xuezhi Tan

A Novel Log-WT Based Super-Resolution Algorithm

Jianping Qiao and Ju Liu

Multiscale Gradient Vector Field with Application to Image Denoising and Enhancement

Jinye Peng, Wanhai Yang, and Yichun Wang

Recovering Intrinsic Images from Weighted Edge Maps

Qiang He and Chee-Hung Henry Chu

An Optimal Independent Component Analysis Approach for Functional Magnetic Resonance Imaging Data

Nan Zhang, Xianchuan Yu, and Guosheng Ding

Block Mean Value Based Image Perceptual Hashing

Bian Yang, Fan Gu, and Xiamu Niu

Session A5: IP Multimedia Services

Adaptive Compression Scheme for Video Delivery over the QoS-Aware Residential Gateway

Pei-Chen Tseng, Ching-Tuey Sung, and Wen-Shyang Hwang

KaiKai: A NAT Traversal Approach by Using Protocol Behavior Analysis

Yung-Li Chang, Hsiang-Kai Liao, Ce-Kuen Shieh, and Yu-Ben Miao

Video Transmission Performance Evaluation of Ad Hoc Routing Protocols

Ku-Lan Kao, Chih-Heng Ke, and Ce-Kuen Shieh

A Fast-Startup TCP Mechanism for VoIP Services in Long-Distance Networks

Mong-Fong Horng, Hung-Wei Hsu, Wan-Ling Du, Yi-Hsiang Hung, and Ming-Harng Lee

Enabled SIP-Based Multimedia Services with MPLS Technology in Ad Hoc Wireless Networks

Hong-Peng Wang, Tie-Jun Zhang, and Xiao-Zong Yang

Self-Similar Property for TCP Traffic under the Bottleneck Bandwidth Restrainment

Takuo Nakashima

Multi-Dimensional Packet Classification Using Tuple Space Based on Bit-Parallelism

Xue-Guang Wang

Video Streaming over 3G Networks with GOP-Based Priority Scheduling

Yongjin Cho, Do-Kyoung Kwon, C.-C. Jay Kuo, Renxiang Huang, Claudio Lima, Jim D. Black, and James J. Pan

Rate Control Scheme Based on Cauchy R-D Optimization Model for H.264/AVC under Low Delay Constraint

N. Eiamjumrus and S. Aramvith
Session A6: Evolutionary and Soft Computing

Research Based on Fuzzy Algorithm of Cancer Cells in Pleural Fluid Microscopic Images Recognition ..... 211
   Lei Zhang, Qiuguang Wang, and Jiping Qi

Genetic Algorithm Based Optimal Block Mapping Method for LSB Substitution ...................................... 215
   Rongrong Ji, Hongxun Yao, Shaohui Liu, and Liang Wang

Nonholonomic Motion Planning of Mobile Robot with Ameliorated Genetic Algorithm .......................... 219
   JinFei Wu, DongXing Qin, and HongPing Yu

Delay Constrained Fuzzy Rate Control for Video Streaming over DVB-H .............................................. 223
   Mehdi Rezaei, Moncef Gabbouj, and Imed Bouazizi

Medical Image Noise Reduction Using Cellular Neural Networks .......................................................... 228
   Te-Jen Su and Jyun-Wei Jhang

A Dynamic Clustering Algorithm Based on PSO and Its Application in Fuzzy Identification ...................... 232
   Dingxue Zhang, Xinzhi Liu, and Zhihong Guan

Forensic Analysis of Document Fragment Based on SVM ........................................................................... 236
   BingLong Li, Qingxian Wang, and Junyong Luo

Design of Two-Dimensional Recursive Filters by Using Quantum-Behaved Particle Swarm Optimization .... 240
   Wei Fang, Jun Sun, and Wenbo Xu

Analysis and Problems on Fuzzy Vault Scheme ........................................................................................ 244
   Qiong Li, Zhaoqing Liu, and Xiamu Niu

Session B1: Multimedia Networking and Communications in Dynamic Heterogeneous Environments

GA-Based Internet Traffic Classification Technique for QoS Provisioning ................................................. 251
   Junghun Park, Hsiao-Rong Tyan, and C.-C. Jay Kuo

Multi-user Video Streaming over Multi-hop Wireless Networks: A Cross-Layer Priority Queuing Scheme ... 255
   Hsien-Po Shiang and Mihaela van der Schaar

H.264 Error Resilience Coding Based on Multi-hypothesis Motion Compensated Prediction and Adaptive Intra-refresh ............................................................. 259
   Yuh-Chou Tsai, Chia-Ming Tsai, and Chia-Wen Lin

Implementation and Performance Evaluation of LT and Raptor Codes for Multimedia Applications ............ 263
   Pasquale Cataldi, Miquel Pedròs Shatarski, Marco Grangetto, and Enrico Magli

HoLiSTiC: Heterogeneous Lightweight Sensornets for Trusted Visual Computing .................................. 267
   Deepa Kundur, Unoma Ndiili Okorafor, and William Luh

Positioning Algorithm of Wireless Sensor Network Nodes ......................................................................... 271
   Wenhui Zhao, Daxin Liu, and Yu Jiang

Evaluation of Signal Processing Effect in Media Gateway Based on Cross Correlation ............................. 274
   Hao Wang, Yanying Wang, Jikun Guo, and Dianwu Gao

Curve-Based Secure Routing Algorithm for Sensor Network ................................................................... 278
   Fen-hua Cheng, Jin Zhang, and Zheng Ma

Domain-Based Dynamic Resource Management Mechanism Supporting Large-Scale Grid Application .... 282
   Guo-min Zhang, Yong Zhang, Ming Chen, and Huan Xiong
Session B2: Pattern Recognition

Symmetrical Color-Spatial Feature for Medical Image Retrieval ................................................................. 289
   Jing-yi Qu and Hao-shan Shi

Face Detection Based on Complexional Segmentation and Feature Extraction ........................................... 293
   Qian Zhang and Zhi-Jing Liu

Gabor Filter Based Text Extraction from Digital Document Images ............................................................... 297
   Yu-Long Qiao, Meng Li, Zhe-Ming Lu, and Sheng-He Sun

Discriminant Feature Fusion Strategy for Supervised Learning ....................................................................... 301
   Jun-Bao Li, Shu-Chuan Chu, Jung-Chou Harry Chang, and Jeng-Shyang Pan

A Novel Matrix Norm Based Gaussian Kernel for Feature Extraction of Images ......................................... 305
   Jun-Bao Li, Shu-Chuan Chu, Jeng-Shyang Pan, and Jiun-Huei Ho

A Facial Expression Recognition Approach Based on Confusion-Crossed Support Vector Machine Tree .... 309
   Qinzhen Xu, Pinzheng Zhang, Wenjiang Pei, Luxi Yang, and Zhenya He

An Improved Design and Implementation of Chinese Name Card Recognition System on Mobile Devices ................................................................................................................ 313
   Chi Cui

A Method of Biomimetic Pattern Recognition for Speaker Recognition ..................................................... 317
   Bo Qian, Yanping Li, Limin Xu, and Zhenmin Tang

A PCA Based Visual DCT Feature Extraction Method for Lip-Reading ...................................................... 321
   Xiaopeng Hong, Hongxun Yao, Yuqi Wan, and Rong Chen

Session B3: Recognizing Humans and Human Behavior in Video

Atomic Human Action Segmentation Using a Spatio-temporal Probabilistic Framework .................................. 327
   Duan-Yu Chen, Sheng-Wen Shih, and Hong-Yuan Mark Liao

Understanding Human Behavior Using a Language Modeling Approach ....................................................... 331
   Yu-Ming Liang, Sheng-Wen Shih, Arthur Chun-Chieh Shih, and Hong-Yuan Mark Liao

Human Motion Recognition Using Clay Representation of Trajectories .......................................................... 335
   Yu-Chun Lai and Hong-Yuan Mark Liao

Boosted String Representation and Its Application to Video Surveillance ...................................................... 339
   Yung-Tai Hsu and Jun-Wei Hsieh

Comparison Study on SVD-Based Face Classification ...................................................................................... 343
   Yong Xu and Yingnan Zhao

Image Retrieval Based on Improved Entropy and Moments ............................................................................ 347
   Junding Sun

SVD Based Robust Image Content Retrieval ........................................................................................................ 351
   Yuhua Jiao, Bian Yang, He Wang, and Xiamu Niu

Emotion Recognition Using Physiological Signals from Multiple Subjects .................................................... 355
   Lan Li and Ji-hua Chen

A Fire-Alarming Method Based on Video Processing ....................................................................................... 359
   Ping-He Huang, Jing-Yong Su, Zhe-Ming Lu, and Jeng-Shyang Pan
Session B4: Steganography

A New Steganalysis Method for Adaptive Spread Spectrum Steganography ................................................. 365
  Rongrong Ji, Hongxun Yao, Shaohui Liu, Liang Wang, and Jianchao Sun

A Steganalysis Method Based on the Distribution of First Letters of Words .................................................. 369
  Xin-guang Sui, Hui Luo, and Zhong-liang Zhu

A Methodology to Improve the Detection Accuracy in Digital Steganalysis .................................................. 373
  Antonio Savoldi and Paolo Gubian

A Research on Steganography Method Based on Error-Correcting Codes .................................................. 377
  Cui-Qing Liu, Xi-Jian Ping, Tao Zhang, Lin-Na Zhou, and Yun-He Wang

Research of Chaos Encryption Algorithm Based on Logistic Mapping ....................................................... 381
  Jinhong Luo and Haiyi Shi

Analysis of Current Steganography Tools: Classifications & Features ....................................................... 384
  Ming Chen, Ru Zhang, Xinxin Niu, and Yixian Yang

Java Applets Copy Protection by Steganography .......................................................................................... 388
  Mohammad Shirali-Shahreza

Novel Steganographic Schemes Based on Row-Major Mapping Relation ...................................................... 392
  Chung-Chuan Wang, Chin-Chen Chang, Jimn-Ke Jan, and Jieh-Shan Yeh

An Improved Secret Key Estimation Method for Sequential Steganography .................................................. 396
  Ping Wang, Xiangyang Luo, and Fenlin Liu

Session B5: Video Surveillance

Design of Gabor Filter Banks for Iris Recognition ......................................................................................... 403
  Chia-Te Chou, Sheng-Wen Shih, and Duan-Yu Chen

Abnormal Event Detection in Video Using N-cut Clustering ........................................................................ 407
  Chun-Ku Lee, Meng-Fen Ho, Wu-Sheng Wen, and Chung-Lin Huang

Efficient Moving Object Extraction in Compressed Low-Bit-Rate Video ..................................................... 411
  Chih-Chung Hsu, Hsuan T. Chang, and Ting-Cheng Chang

Vision-Based Autonomous Vehicle Guidance in Indoor Environments Using Odometer and House
  Corner Location Information .......................................................................................................................... 415
  Kai-Li Chiang and Wen-Hsiang Tsai

A Fast Facial Expression Recognition Method at Low-Resolution Images ..................................................... 419
  Cheng-Chang Lien, Yang-Kai Chang, and Chih-Chiang Tien

The Effect of Frame Freezing and Frame Skipping on Video Quality ............................................................ 423
  Yining Qi and Mingyuan Dai

The Smoke Detection for Early Fire-Alarming System Base on Video Processing ........................................ 427
  Thou-Ho (Chao-Ho) Chen, Yen-Hui Yin, Shi-Feng Huang, and Yan-Ting Ye

An Adjustable Multipath Flatted-Hexagon Search Algorithm for Block Motion Estimation .......................... 431
  Tsong-Yi Chen, Thou-Ho (Chao-Ho) Chen, Shi-Feng Huang, and Yi-Fan Li

Automatic Real-Time Moving Target Detection from Infrared Video .......................................................... 435
  Shahryar Karimi-Ashtiani and C.-C. Jay Kuo
Session B6: Digital Watermarking (II)

Interlacing Domain Partition for Fractal Watermarking ................................................................. 441
  Ping-Sung Liao, Cheng-Yi Chen, Chun-Chi Chen, and Jeng-Shyang Pan

Improved Video Verification Method Using Digital Watermarking .................................................. 445
  Isao Echizen, Takaaki Yamada, Satoru Tezuka, Stephan Singh, and Hiroshi Yoshiura

Blind Watermarking in Contourlet Domain with Improved Detection .............................................. 449
  M. Jayalakshmi, S. N. Merchant, and U. B. Desai

A Heuristic Method for Extracting Enhanced Watermarks from Digital Images .............................. 453
  Chin-Chen Chang, Yung-Chen Chang, and Jau-Ji Shen

Image Watermarking Based on Singular Value Decomposition ......................................................... 457
  Jie Liu, Xiaoru Niu, and Wenhai Kong

A Practical Multipurpose Watermarking Scheme for Visual Content Copyright Protection and
Authentication ........................................................................................................................................ 461
  Zhifang Wang, Bian Yang, Xiamu Niu, and Yijia Zhang

Geometrically Invariant Watermark Using Fast Correlation Attacks ............................................. 465
  Dan Wang and Peizhong Lu

Audio Integrity Protection and Falsification Estimation by Embedding Multiple Watermarks ............... 469
  Michael Gulbis, Erika Müller, and Martin Steinebach

The Attacking Method for DC Components Watermarking ............................................................. 473
  Pei-Wei Tsai, Shu-Chuan Chu, Ching-Sung Lu, Jui-Fang Chang, and Hsing-Yuan Liao

Session C1: Advanced Algorithms and Systems for Multimedia Processing and Networking

VLSI Bio-Inspired Microsystem for Robust Microarray Image Analysis and Recognition .................. 479
  Wai-Chi Fang and Jaw-Chyng L. Lue

Codec Design for Variable-Length to Fixed-Length Data Conversion for H.263 ............................... 483
  Chua-Chin Wang, Gang-Neng Sung, and Jia-Hao Li

Reversible Data Hiding for 3D Point Cloud Model ............................................................................. 487
  Hao Luo, Jeng-Shyang Pan, Zhe-Ming Lu, and Hsiang-Cheh Huang

Multiple Description Image Coding Using Shifted Lattice Vector Quantization .............................. 491
  Huihui Bai and Yao Zhao

Implications of a Novel Family of Stochastic Methods for Function Recovery ............................... 495
  Joseph Kolibal and Daniel Howard

A Motion-Compensated Error Concealment Scheme for H.264 Video Transmission ....................... 499
  Chun-Ting Hung and Jin-Jang Leou

H.264/AVC Video Encoder Implementation Based on Tl TMS320DM642 .......................................... 503
  Hong-Jun Wang, Yong-Jian Huang, and Hua Li

R-D Optimized Frame-Layer Bit Allocation for H.264 ........................................................................ 507
  Do-Kyoung Kwon, Mei-Yin Shen, and C.-C. Jay Kuo

Fast H.264/AVC Inter-mode Decision with RDC Optimization ....................................................... 511
  Yu Hu, Qing Li, Siwei Ma, and C.-C. Jay Kuo
Session C2: Signal Processing and Data Compression

Chaotic Signal Design with Selected Parameters .......................................................... 517  
*Baishan Zhao and Yi-Sheng Zhu*

Error-Tolerance and Multi-media ................................................................................. 521  
*Melvin A. Breuer and Haiyang (Henry) Zhu*

An Improved Technique for Blind Audio Source Separation ..................................... 525  
*Namgook Cho, Yu Shiu, and C.-C. Jay Kuo*

Adaptive Working Window for Impulse Noise Reduction ........................................... 529  
*Thou-Ho (Chao-Ho) Chen, Shi-Feng Huang, Chao-Yu Chen, and Zhi-Hong Lin*

Improved Linear Prediction Technique for Musical Onset Detection .......................... 533  
*Wan-Chi Lee and C.-C. Jay Kuo*

A Method Combining LPC-Based Cepstrum and Harmonic Product Spectrum for Pitch Detection ................................................................. 537  
*Hui Ding, Bo Qian, Yanping Li, and Zhenmin Tang*

Improved SMVQ Scheme with Edge-Directed Prediction ........................................... 541  
*Chin-Chen Chang, Yi-Hui Chen, and Kuan-Ming Li*

A Novel Image Compression Algorithm Based on Sixteen Most Lately Used Encoded Codewords ................................................................. 545  
*Chin-Chen Chang, Yung-Chen Chang, and Jau-Ji Shen*

Quantization Index Modulation Using Vector Quantization with DWT Based State-Codebook Search ................................................................. 549  
*Chin-Chen Chang and Yung-Chen Chou*

Session C3: System Implementation

Design of AC-PDP Signal Processor for SoC Application ............................................. 555  
*Song Qiu, Wai-yun Li, Jin-gao Liu, and Wen-jing Hu*

A Novel Low-IF Topology for High Performance Integrated Receivers ........................ 559  
*Lingjun Xu, Qiang Wang, Jiansong Gao, Yong Wang, and Ping Zhang*

Power Optimization for Bus on Multimedia SoC ......................................................... 563  
*Ru Yang, Gang Feng, and Donghai Li*

Design and Implementation of an MHP Video and Graphics Subsystem on Xilinx ML310 Platform ................................................................. 567  
*Min-Hong Chen, Feng-Cheng Chang, and Hsueh-Ming Hang*

A Single-Stream Pipelined Instruction Decompression System for Embedded Microprocessors ................................................................. 571  
*Yuan-Long Jeang, Tsuu-Shaang Wey, Hung-Yu Wang, and Chih-Chung Tai*

Research on Applying Java Card to Database Encryption Systems .............................. 575  
*Han Yu, Xianmu Niu, Duohe Ma, and Changxiang Shen*

System-on-Chip Architecture Design for Intelligent Sensor Networks ......................... 579  
*Wai-Chi Fang, Sharon Kedar, Susan Owen, Gu-Yeon Wei, and David Brooks*

Low-Power Radio Design for Wireless Smart Sensor Networks .................................. 583  
*Wai-Chi Fang and Tsung-Hsien Lin*

VS-ISA: A Video Specific Instruction Set Architecture for ASIP Design ....................... 587  
*Zheng Shen, Hu He, Yanjun Zhang, and Yihe Sun*
Session C4: Data Hiding and Security

Reversible Data Hiding for 3D Meshes in the PVQ-Compressed Domain ...................................................... 593
Zhen Sun, Zhe-Ming Lu, and Zhen Li

Utilization of Maximum Data Hiding Capacity in Object-Based Text Document Authentication ............... 597
Intiaz Awan, S. A. M. Gilani, and S. A. Shah

A Novel Algorithm for Scrambling Digital Image Based on Cat Chaotic Mapping ........................................... 601
Liehuang Zhu, Wenzhuo Li, Lejian Liao, and Hong Li

Focus on the Generalized Information Hiding Technology ........................................................................... 605
Dai-mao Lin, Lin-na Zhou, Yun-biao Guo, Lan Hu, and Xia-mu Niu

Information Hiding Method in Digital Audio Signal Based on Perfect Codes ................................................. 609
Lin-na Zhou, Cui-qing Liu, Xi-jian Ping, Tao Zhang, and Yun-he Wang

A Novel Large Capacity Image Hiding Method Based on the Orthogonal Chaotic Sequences ..................... 613
Yaqin Zhao, Nan Zhao, Guanghui Ren, and Bo Zhang

An Image Hiding Scheme Based on Du’s Disk Allocation Method .............................................................. 617
Chia-Chen Lin and Chin-Chen Chang

Analysis of Anonymity on the Signatures of Knowledge ............................................................................... 621
Xinguang Zou and Shenghe Sun

An Efficient Attestation for Trustworthiness of Computing Platform .............................................................. 625
Xiao-Yong Li, Chang-Xiang Shen, and Xiao-Dong Zuo

Session C5: Signal Processing and Coding

Effects on Statistical Features for Image by Quantization ................................................................................. 631
Yanqing Guo, Weiwei Quan, Yanwu Zhu, Xingang You, and Xiangwei Kong

A Multiscale and Multidirectional Image Denoising Algorithm Based on Contourlet Transform ..................... 635
Bei-bei Li, Xin Li, Shu-xun Wang, and Hai-feng Li

Design of Collusion-Free Codes Based on MAI-Free Principle ........................................................................ 639
Byung-Ho Cha and C.-C. Jay Kuo

Performance Evaluation of Transcoding Algorithms for MPEG-2 to AVS-P2 ................................................ 643
Zhenyu Wu, Hongyang Yu, Bin Tang, and Hong Hu

Chirp-Based Image Watermarking as Error-Control Coding ........................................................................ 647
Behnaz Ghoramani and Sridhar Krishnan

Performance Analysis of Color Image Watermarking Schemes Using Perceptually Redundant Signal Spaces ................................................................................................................. 651
Chun-Hsien Chou and Kuo-Cheng Liu

Decoder-Friendly Subpel MV Selection for H.264/AVC Video Encoding ...................................................... 655
Qi Zhang, Yuyang Dai, Siwei Ma, and C.-C. Jay Kuo

Image Inspection System for Defect Detection of Multilayer Ceramic Capacitors ........................................ 659
Chun-Chieh Tseng, Mao-Fu Lai, and Por-Song Lee

Combining Log-Spectral Domain Compensation with MVA Feature Post-Processing for Robust Speech Recognition ................................................................................................................ 663
Jianjun Lei, Jian Wang, Jun Guo, Gang Liu, and Haifeng Shen
Session C6: Cross-Discipline Technology

Fast Algorithm of Trigonometric Function of Specific Angle
Qiusheng He, Wending Liu, Fuzeng Wang, Jianjun Hao, Hui Li, and Yaqi Cheng

Voice2SQL: A Hybrid Intelligent System for the Recovery of Information from Databases by Means of Spoken Natural Language
Omar U. Florez-Choque

The Watermarking Model for Relational Database Based on Watermarking Sharing
Cong Jin, Yu Fu, and Feng Tao

Progressive Image Transmission Using Significant Features and Linear Regression Prediction
Chin-Chen Chang and Jun-Chou Chuang

The Production Algorithm of Pseudo-Random Number Generator Based on Compound Non-linear Chaos System
Xiao-jun Tong, Ming-gen Cui, and Wei Jiang

Pervasive Computing Context Access Control Based on UCONABC Model
Fang Pu, Daoqin Sun, Qiying Cao, Haibin Cai, and Fan Yang

A Non-uniform Quantizing Approach to Protect Biometric Templates
Qi Han, Zhifang Wang, and Xiamu Niu

Detecting the Theft of Natural Language Text Using Birthmark
Jianlong Yang, Jianmin Wang, and Deyi Li

A Context-Aware AmI System Based on MAS Model
Yong Zhang, Yibin Hou, Zhangqin Huang, Hui Li, and Rui Chen

Author Index
