# Table of Contents

## Preface

Preface ........................................................................................................................................................................... xxxi

## Organizing Committee

Organizing Committee .................................................................................................................................................... xxxii

## A01: Digital Crime and Forensics

Challenges of Location Tracking Techniques in Wireless Forensics ................................................................. 3
    Emmanuel Velasco, Weifeng Chen, Ping Ji, and Raymond Hsieh

Copyright Protection in Wireless Sensor Networks by Watermarking................................................................. 7
    Rong Xiao, Xingming Sun, and Ying Yang

File-Update Based Steganography for Microsoft PowerPoint Files ................................................................. 11
    Yongping Liu, Xingming Sun, Yuling Liu, and Rong Xiao

Random Index Modulation Based Fragile Watermarking Scheme for Authenticating Colour Images ................. 16
    Chang-Tsun Li and Yue Li

A Steganography Scheme in P2P Network .................................................................................................................. 20
    Zishuai Li, Xingming Sun, Baowei Wang, and Xiaoliang Wang

A Fragile Document Watermarking Technique Based on Wet Paper Code ....................................................... 25
    Jiaxin Yu, Xinsheng Wang, Jianfei Li, and Xu Nan

New Watermark Attacking Method Based on Eigen-Image Energy ................................................................. 29
    Te-Cheng Hsu, Wen-Shyong Hsieh, and Tung-Shih Su
**A02: Ubiquitous Multimedia Services and Applications for Residential Users**

Building an Online Game-Based Learning System for Elementary School ................................................................. 35
  Yuh-Ming Cheng and Peng-Fei Chen

The Study of Balance Traffic Load with Genetic Algorithm for PON.................................................................................. 39
  Chun-Ting Huang

A Hybrid Fast Approach to Secure Group-Oriented Management of Key Trees on Internet............................................................ 43
  Chien-Ming You, Mong-Fong Horng, Yau-Hwang Kuo, and Wan-Ling Du

Research on Remote Monitoring and Control System Key Techniques Based on Data Point Table .................................................................................................................. 47
  Han Xiao, Chao Wang, and Na Feng

An Adaptive Cross-Layer Scheduling Algorithm for Multimedia Networks........................................................................... 52
  Xiuyuan Li, Xiaojuan Wu, Wenming Li, and Xiaogang Wang

A Model of Smart Home Fusing Multi-intelligence............................................................................................................................. 56
  Jun-feng Man, Lu-Ming Yang, Wen-qi Zhu, and Qian-Qian Li

Supporting Multiple Classes of Services in IP over WDM Ring Network.................................................................................. 60
  Jih-Hsin Ho and Wen-Shyang Hwang

A Middleware Design for Block Cipher Seamless Connected into Stream Cipher Mode ................................................................................. 64
  Lan Luo, ZhiGuang Qin, ShiJie Zhou, ShaoQuan Jiang, and Juan Wang

**A03: Information Retrieval (1)**

Shape Feature Extraction Using Fourier Descriptors with Brightness in Content-Based Medical Image Retrieval................................................................................. 71
  Gang Zhang, Z. M. Ma, Qiang Tong, Ying He, and Tienan Zhao

Image Retrieval Based on Fuzzy Color Histogram ............................................................................................................................. 75
  Kai-xing Wu and Qiang Xu

Combination of Wavelet and SIFT Features for Image Classification Using Trained Gaussian Mixture Model ....................................................................................... 79
  Kejun Wang, Zhen Ren, and Xinyan Xiong

Media Adaptation in MPEG-21 DIA, Framework, Activities and Open Issues.................................................................................. 83
  Tian-Yun Huang

A Novel Facial Image Retrieval Algorithm Based on PLT-PCA............................................................................................. 87
  Qi Han, Chen Song, Meihui Zhang, and Xiamu Niu
An Improved Presentation Method for Relevance Feedback in a Content-Based Image Retrieval System ................................................................. 91
Feng-Cheng Chang and Hsueh-Ming Hang

A Study on the Meta-data Design for Long-Term Digital Multimedia Preservation ................................................................. 95
Feng-Cheng Chang, Chin-Yuan Chang, and Hsueh-Ming Hang

A04: Wired and Wireless Multimedia Networking and Applications

Performance Framework for P2P Overlay Network .............................................................................................................................. 101
Takuo Nakashima, Akari Ono, and Toshinori Sueyoshi

Queueing Property for Different Type of Self-Similar Traffics .................................................................................................................. 105
Takuo Nakashima, Yusuke Shomura, and Toshinori Sueyoshi

An Animation Engine with the Cubic Spline Interpolation ...................................................................................................................... 109
Ningping Sun, Toru Ayabe, and Kentarou Okumura

An Approach to Speech Driven Animation ............................................................................................................................................. 113
Ningping Sun, Kaori Suigetu, and Toru Ayabe

IPTV QoS Implement Mechanism in WLAN ........................................................................................................................................ 117
Jin-Yu Zhang and Man-Gui Liang

Location Scheme in Wireless Sensor Networks ..................................................................................................................................... 121
Yao Ye, Cai Wandong, Vincent Hilaire, and Abder Koukam

Secure Peer Joining Process in Structured P2P System ............................................................................................................................. 126
Wei Song and Yuelong Zhao

Reducing Signaling cost with Simplified mSCTP In Fast Mobile IPv6 .................................................................................................. 130
Jiemin Liu, Jingxin Dou, Hongxing Zou, and Yuan Gao

A05: Techniques and Algorithms for Multimedia Security (1)

A Proposal of Falsification Detection System in Structural Design ........................................................................................................... 137
Kenshi Uematsu and Ryoichi Sasaki

Fingerprinting Traffic Log ......................................................................................................................................................................... 143
Katsunari Yoshioka and Tsutomu Matsumoto

Expiration Dated Fingerprinting ................................................................................................................................................................. 147
Maki Yoshida and Toru Fujiwara

Lossless Data Hiding Using Bit-Depth Embedding for JPEG2000 Compressed Bit-Stream ............................................................................................................. 151
Shogo Ohyama, Michiharu Niimi, Kazumi Yamawaki, and Hideki Noda
A06: Event Analysis in Videos

Face Detection with Automatic White Balance for Digital Still Camera ................................................................. 173
Yuan-Kai Wang and Chin-Fa Wang

Human Action Recognition Using Star Templates and Delaunay Triangulation .......................................................... 179
Chi-Hung Chuang, Jun-Wei Hsieh, Luo-Wei Tsai, and Kuo-Chin Fan

Iris Recognition Based on Matching Pursuits............................................................................................................. 183
Yueh-Shiun Lee, Jinn Ho, Wen-Liang Hwang, and Chung-Lin Huang

Dynamic Visual Saliency Modeling for Video Semantics ................................................................................................. 188
Duan-Yu Chen, Hsiao-Rong Tyan, Sheng-Wen Shih, and Hong-Yuan Mark Liao

Digital Image Forgery Detection Based on the Consistency of Defocus Blur ................................................................. 192
Xin Wang, Bo Xuan, and Si-long Peng

Video Key Frame Extraction Based on Spatial-Temporal Color Distribution ................................................................. 196
Zhonghua Sun, Kebin Jia, and Hexin Chen

A Speaker Identification System for Video Content Analysis.......................................................................................... 200
Jing Bi and Shu-Chang Liu

Detection of H.264 Shot Change Using Intra Predicted Direction .................................................................................. 204
Tien-Ying Kuo and Yi-Chung Lo

A07: Fingerprinting

An Asymmetric Multicast Fingerprinting Scheme Based on Secret Sharing ................................................................. 211
Ren Yanzhen, Hu RuiMin, and Ai Haojun

A Forward Secure Ring Signature Scheme ..................................................................................................................... 215
Bao Wansu and Wei Yun

Trust Derivation and Recommendation Management in a Trust Model ........................................................................ 219
Lifen Li

</tbody>
</table>
Fast Implementation of SMS4 Cryptographic Algorithms on Smart Card
Dawei Zhang, Wenrui Ding, and Ding Ding

A Method of Big Prime Number Generator Based on NTL
Tao Meng, Xiaojian Wu, and Shenghe Sun

A Security Threshold Subliminal Channel Based on Elliptic Curve Cryptosystem
Yuhua Xie, Xingming Sun, Lingyun Xiang, and Gang Luo

An AVL Tree-Based Dynamic Key Management in Hierarchical Wireless Sensor Network
Yi-Ying Zhang, Wen-Cheng Yang, Kee-Bum Kim, and Myong-Soon Park

Data Study on the Chaotic Synchronization Driven by External Chaotic Signal
Chun-Yan Song, Yu-Long Qiao, and Xing-Zhou Zhang

JPEG Encryption with File Size Preservation
Xiam Niu, Chongqing Zhou, Jianghua Ding, and Bian Yang

A10: Techniques and Algorithms for Multimedia Security (2)

Picture Watermarks Surviving General Affine Transformation and Random Distortion
Yusuke Atomori, Isao Echizen, and Hiroshi Yoshiura

Information Hiding Method Utilizing Low Visible Natural Fiber Pattern for Printed Documents
Kitahiro Kaneda, Kenji Hirano, Keiichi Iwamura, and Seiichiro Hangai

A Study of Information Hiding Performance Using Simple Dot Pattern with Different Tile Sizes
Kitahiro Kaneda, Fumiya Nagai, Keiichi Iwamura, and Seiichiro Hangai

Development of Benchmark Tool for Digital Watermarking
Kosuke Kamiya, Takuma Mori, and Keiichi Iwamura

Design and Implementation of Synchronized Audio-to-Audio Steganography Scheme
Xuping Huang, Ryota Kawashima, Norihisa Segawa, and Yoshihiko Abe

A Chinese Text Watermarking Based on Statistic of Phrase Frequency
Qing-cheng Li, Jin Zhang, Zhen-hua Zhang, and Jia-xin Liu

A Capacity Variable Watermarking Algorithm for 2D Engineering Graphic Based on Complex Number System
Xiaofeng Huang, Fei Peng, and Tao Deng

A Robust Watermarking Scheme Based on a Novel HVS Model in Curvelet Domain
Yi Xiao, L. M. Cheng, and L. L. Cheng
A11: Pattern Recognition (1)

Comparison of Two Modern Pattern Recognition Methods ................................................................. 351
Xiaochun Shi

Sign Language Synthesis of Individuation Based on Data Model .............................................................. 354
Xiaoyu Wang, Feng Jiang, and Hongxun Yao

An Efficient Model for Isolated Vietnamese Handwritten Recognition .................................................... 358
Pham Anh Phuong, Ngo Quoc Tao, and Luong Chi Mai

New Criterion for Mining Strong Association Rules in Unbalanced Events ........................................ 362
Tong-yan Li and Xing-ming Li

Using Semantics for Dynamic Access Control of XML Documents in Dynamic Coalition Environment .... 366
Tao Peng, Minghua Jiang, and Ming Hu

MST Clustering Algorithm Based on Optimized Grid ............................................................................... 370
JianLiang Meng and WeiXiang Cheng

A Statistic Feature-Based Scheme for the Template Protection of 2D Face Recognition ................................ 374
Qianwen Wang, Wenjun Huang, Xiamu Niu, and Xiuzhan Jiang

A Face Recognition Algorithm Decreasing the Effect of Illumination ................................................... 378
Yung-Mao Lu, Bin-Yih Liao, and Jeng-Shyang Pan

A12: Image and Speech Processing

An Embedded and Efficient Low Memory Hierarchical Image Coder .................................................... 385
Ren-long Wang, Yan-ling Hao, Ying Liu, and Jin Xi

Improved Hidden Markov Tree Model and Its Application in Image Denoising ........................................ 389
Wenzhe Lu, Zhe Zhang, and Xixian Niu

Image Recovery Based on Effective Image Completion ............................................................................ 393
Chung-Ming Kuo, Nai-Chung Yang, Wei-Han Chang, and Chi-Lin Wu

Image Editing without Color Inconsistency Using Modified Poisson Equation ........................................ 397
Chuan Qin, Shuozhong Wang, and Xinpeng Zhang

The Study of 3D Reconstruction Method Based on Dynamic Threshold Method and Improved Ray Casting Algorithm ....................................................................................... 402
Huiyan Jiang, Yudong Zhao, and Ning Li

Perceptually Transparent Information Hiding in G.729 Bitstream ......................................................... 406
Lihua Liu, Mingyu Li, Qiong Li, and Yan Liang

Compressed Domain Perceptual Hashing for MELP Coded Speech ....................................................... 410
Yuhua Jiao, Qiong Li, and Xiamu Niu
Automatic Target Detection and Tracking in FLIR Image Sequences
Using Morphological Connected Operator ................................................................. 414
Chang'an Wei and Shouda Jiang

A13: Video Signal Processing (1)

An Extended Self-Adaptive Kalman Filtering Object Motion Prediction Model .................. 421
Yunpeng Zhang, Zhengjun Zhai, Xuan Nie, Chunyan Ma, and Fei Zuo

A Novel Algorithm of Fast Detection and Segmentation of Moving Object ....................... 425
Zhuoyi Lv and Kebin Jia

Content-Aware Video Transcoding via Visual Attention Model Analysis .......................... 429
Chia-Hung Yeh, Shih-Meng Chen, and Shunn-Jang Chern

A Data Layout and Access Control Strategies of the Video Storage Server Based Disk Array ................................................................. 433
Yuan-Qing He and Shi-Xin Sun

A Multi-view Video Coding Method Based on Distributed Source Coding for Free Viewpoint Switching ................................................................. 438
Guiguang Ding

Fast Local Motion Estimation and Robust Global Motion Decision for Digital Image Stabilization ................................................................. 442
Tien-Ying Kuo and Chung-Hsin Wang

Efficient Block-Matching Motion Estimation Algorithm Based on Temporal and Spatial Correlation for H.264 ................................................................. 446
Zu-jue Chen, Zhi-xiong Zhang, and Xing Luo

A Video Summarization Approach Based on Machine Learning ........................................ 450
Wei Ren and Yuesheng Zhu

A14: Watermarking Applications (1)

A New Visually Imperceptible and Robust Image Watermarking Scheme in Contourlet Domain ................................................................. 457
Elham Salahi, M. Shahram Moin, and Ahmad Salahi

Software Watermarking Based on Dynamic Program Slicing ............................................. 461
Xiaohong Deng, Guowen Xu, Guang Sun, and Junfeng Man

A Robust Watermarking Scheme Using Selective Curvelet Coefficients .......................... 465

Image Watermarking Scheme Using Singular Value Decomposition and Micro-genetic Algorithm ................................................................. 469
Chih-Chin Lai, Hsiang-Cheh Huang, and Cheng-Chih Tsai
The 2nd BOWS Contest: Wavelet-Based Bayesian Denoising Attack on Image Watermarking ................................................................. 473
  
  Larbi Boubchir, Ayoub Otmani, and Nadia Zerida

Stylometric Watermarking .............................................................................. 477
  
  Qian Zhang and Nigel Boston

Multiplicative Watermark Detection Using Locally Optimum Nonlinearity .......................................................... 481
  
  Tianyu Ye, Yu Fu, Zhiguo Qu, Xinxin Niu, and Yixian Yang

Mean-Classified and Hierarchical Block Matching Watermarking in Fractal Coding .......................................................... 485
  
  Jing-Ming Guo, Chung-Te Yang, and Jiann-Der Lee

**A15: Networking Applications (1)**

A Holonic Model in Wireless Sensor Networks ............................................................................ 491
  
  Yao Ye, Vincent Hilaire, Abder Koukam, and Cai Wandong

Asymmetric Path Optimization in Mobile Multi-homed SCTP Multimedia Transport ................................................................................ 496
  
  Jiemin Liu, Hongxing Zou, Jingxin Dou, and Yuan Gao

Research on Three-Dimensional Localization Algorithm in Wireless Sensor Network .......................................................... 500
  
  Kai Li, Shijue Zheng, Zhenhua Zheng, and Xiaoyan Chen

Intelligent Campus Multi-application RFID Integration System ............................................................................ 504
  
  Yuan-bo Chen, Chih-Jen Yang, and Gwo-Jia Jong

Wireless Grid and Storage System Design ............................................................................ 508
  
  Wenyong Zeng, Yuelong Zhao, Wei Song, and Wenfeng Wang

A Metrics Suite for Static Structure of Large-Scale Software Based on Complex Networks ............................................................................ 512
  
  Haohua Zhang, Hai Zhao, Wei Cai, Ming Zhao, Guilan Luo, and Haohua Zhang

On the Security of WAI Protocol in the Third Version of WAPI ............................................................................ 516
  
  Zhao-Hui Tang, Li Xu, Zhide Chen, and Fuchun Guo

Application-Layer Implementation of Service Migration ............................................................................ 520
  
  Chin-Shiuh Shieh, Che-Wei Hsu, and Wei Kuang Lai

**B01: Digital Forensics and Data Hiding Discovery**

Symbian Forensics: An Overview ............................................................................ 529
  
  Antonio Savoldi and Paolo Gubian

Measure of Integrity Leakage in Live Forensic Context ............................................................................ 534
  
  Lei Pan, Antonio Savoldi, Paolo Gubian, and Lynn M. Batten
Methodologies for Detecting Covert Database
Keun-gi Lee, Antonio Savoldi, Paolo Gubian, Kyung Soo Lim, Seokhee Lee, and Sangjin Lee

Design and Implementation of a Tool for System Restore Point Analysis
Sun-Mi Yun, Antonio Savoldi, Paolo Gubian, Yeog Kim, Seokhee Lee, and Sangjin Lee

Design and Implementation of a Tool to Detect Accounting Frauds
Yeog Kim, Antonio Savoldi, Hyewon Lee, Sunmi Yun, Sangjin Lee, and Jongin Lim

A Gene Immune Detection Algorithm with Complement Operator on the Basis of Biological Immune Principles
Yu-Jing Zhang and Shuan-Hu Wu

An Improved Steganalysis Method of LSB Matching
Xiaoyi Yu and Noboru Babaguchi

An Evaluation Framework for Kernel-Mode Security Modules
Hui Zhang, Shenghong Chen, Yuqin Sun, and Xiamu Niu

B02: The Applications of Skin Detection

Face Recognition by Integrating Chin Outline
Jiann-Shu Lee, Kai-Yang Huang, Sho-Tsung Kao, and Seng-Fong Lin

Face Recognition Based on Gabor Features and Two-Dimensional PCA
Yi-Chun Lee and Chin-Hsing Chen

Hand Detections Based on Invariant Skin-Color Models Constructed Using Linear and Nonlinear Color Spaces
Cheung-Wen Chang and Yung-Nien Sun

Knapsack Model for Pixel Based Skin Detection
Sajad Shirali-Shahreza, Hamid Beigy, and M. Hassan Shirali-Shahreza

Face Localization in Cluttered Background
Jing-Wein Wang

Research of Gravity-Based Outliers Detection
JianLiang Meng and WeiXiang Cheng

Sensation Based Clothes Search System
Damon Shing-Min Liu and Ching-I Cheng
B03: Advanced Data Hiding and Coding Techniques for Audio Signals

Data Hiding for Audio Signals That Are Robust with Respect to Air Transmission and a Speech Codec.......................................................... 601
   Akira Nishimura

Steganography in Silence Intervals of Speech................................................................................................................................. 605
   Sajad Shirali-Shahreza and Mohammad Shirali-Shahreza

A Technique of Lossless Steganography for G.711 Telephony Speech.................................................................................... 608
   Naofumi Aoki

Packet Loss Concealment for MDCT-Based Audio Codec Using Correlation-Based Side Information.................................................. 612
   Akinori Ito, Kiyoshi Konno, Shozo Makino, and Motoyuki Suzuki

Audio Watermarking Method Based on the Cochlear Delay Characteristics.................................................................................. 616
   Masashi Unoki and Daiki Hamada

Content-Based Authentication Watermarking with Improved Audio Content Feature Extraction.......................................................... 620
   Michael Gulbis, Erika Müller, and Martin Steinebach

A Digital Watermark for Stereo Audio Signals Using Variable Interchannel Delay in High Frequency Bands........................................ 624
   Kazuhiro Kondo and Kiyoshi Nakagawa

On the Accuracy of Estimated Synchronization Positions for Audio Digital Watermarks Using the Modified Patchwork Algorithm on Analog Channels.................................................. 628
   Koudai Hiratsuka, Kazuhiro Kondo, and Kiyoshi Nakagawa

B04: Intelligent Video Processing

Generalized Bilinear Interpolation of Motion Vectors for Quad-Tree Mesh.................................................................................... 635
   Chih-Cheng Wei and Chin-Hsing Chen

Robust Superresolution Reconstruction from Compressed Video Sequences with Occlusion.......................................................... 639
   Hsi-Kuan Chen, Chin-Hsing Chen, and Shih-Jen Wang

An Adaptive Image Frequency Subbanding Method for High-Frequency Pixel Estimation.......................................................... 643
   Chao-Yu Chen, Chao-Ho (Thou-Ho) Chen, Tien-Hsiang Huang, and Chin-Hsing Chen

A Novel Efficient VLSI Architecture of 2-D Discrete Wavelet Transform .................................................................................... 647
   Chin-Fa Hsieh, Tsung-Han Tsai, Chih-Hung Lai, and Tai-An Shan

Low Power Adders Design for Portable Video Terminal.................................................................................................................. 651
   Chien-Hung Lin, Shu-Chung Yi, and Jin-Jia Chen
The Study on Ship-Flow Analysis and Counting System in a Specific Sea-Area Based on Video Processing ..........................................................................................................................655
   Da-Jinn Wang, Wen-Sheng Chen, Thou-Ho (Chao-Ho) Chen, and Tsong-Yi Chen

H.264 Video Authentication Based on Semi-fragile Watermarking ............................................................................................................................659
   Tsong-Yi Chen, Thou-Ho (Chao-Ho) Chen, Yin-Ting Lin, Yin-Chan Chang, and Da-Jinn Wang

B05: Joint Source Channel Coding and Applications

A Delivery System for Scalable Video Streaming Using the Scalability Extension of H.264/AVC over DiffServ Networks ..........................................................................................................................665
   Lishui Chen and Guizhong Liu

GM/LM Based Error Concealment for MPEG-4 Video Transmission over High Lossy and Noisy Networks.................................................................670
   Xuming Qian, Guizhong Liu, and Huan Wang

A Refined Algorithm for the Side Information in DVC ..............................................................................................................................675
   Ying Feng, Song Xiao, Chengke Wu, and Rui Song

An Approach to Side Information Estimation Based on Universal Prediction and Motion Compensated Interpolation ...............................................................679
   Yangli Wang, Jechang Jeong, Chengke Wu, Song Xiao, and Min Zhou

A H.264 Based Joint Source Channel Coding Scheme over Wireless Channels .............................................................................................................683
   Xuejuan Gao, Li Zhuo, Suyu Wang, and Lansun Shen

Double-Domains-Based Covert Communication Scheme for a RS-Code-Based Multiple Description Image Coding System ..........................................................................................687
   Chuang Lin and Jeng-Shyang Pan

Multiple Description Image Coding Based on DSC and Pixel Interleaving ........................................................................................................691
   Anhong Wang, Yao Zhao, and Jeng-Shyang Pan

Multiple Descriptions and Adaptive Delivery of Media Content over Wireless ........................................................................................................695
   Tian-Yun Huang

B06: Intelligent Signal and Image Processing (1)

Robust Face Recognition Based on Modified ICA without Training Sample of Test Subjects ..........................................................................................................................701
   Xian-Hua Han, Yen-Wei Chen, Akihiko Yamada, and Hideto Fujita

Gaze Tracking by Binocular Vision Technology and PPBTF Features........................................................................................................................675
   Hu-chuan Lu, Chao Wang, and Yen-Wei Chen

Region-Based Segmentation and Auto-Annotation for Color Images .................................................................................................................................709
   Yohei Tsurugai, Yuta Iwasaki, Xian-Hua Han, and Yen-Wei Chen
Classification of Brain Matters in MRI by Kernel Independent Component Analysis..............................................................713
  Tomoko Tateyama, Zensho Nakao, and Yen-Wei Chen

Enhancement and Detection of Lung Nodules with Multiscale Filters in CT Images..............................................................717
  Shingo Takemura, Xianhua Han, Yen-Wei Chen, Kazuhiro Ito, Ikuko Nishikwa, and Masahiro Ito

Interactive System of Artificial Fish School Based on the Extended Boid Model .................................................................721
  Hisashi Kawabayashi and Yen-Wei Chen

Mapping Functions of Color Image Features and Human KANSEI .........................................................................................725
  Yen-Wei Chen, Shouta Sobue, and Xinyin Huang

**B07: Image Feature Extraction, Compression and Watermarking**

A Robust Image Watermarking Scheme Based on the Relationship of SVD.................................................................731
  Xiangyang Sun, Ju Liu, Jiande Sun, Qiang Zhang, and Wei Ji

Intelligent Watermark Recovery Using Spatial Domain Extension .........................................................................................735
  Shiraz Ahmad and Zhe-Ming Lu

A Novel ICA-Based Extraction Scheme for Image Watermarking .........................................................................................740
  Gaorong Zeng and Zhengding Qiu

Digital Watermarking Algorithms for Vector Images ........................................................................................................744
  Yi Wang, Kuilong Xia, Yu Fan, and Qiong Li

An Improved Adaptive QIM Watermark Iterative Algorithm .........................................................................................748
  Xinghua Sun, Ju Liu, Jiande Sun, Niqing Yang, and Shilong Wu

Image Registration Using Feature Points Extraction and Pseudo-Zernike Moments ..............................................................752
  Zhan-Long Yang and Bao-Long Guo

Heritage Debris Classification Based on 3D Texture Feature and SVM..................................................................................756
  Meng Li, Canjie Huang, Ping Fu, and Suyan Yue

A Novel Preservation Framework for Digital Image Archiving System ..................................................................................760
  Tien-Ying Kuo and Wen-Hai Hsiao

**B08: Information Retrieval (2)**

An Efficient Data Replication Scheme for Peer-to-Peer Video Streaming over Wireless-Mesh Community Networks.................................................................767
  Jen-Wen Ding, Wan-Ting Wang, and Chu-Fu Wang

Improving Harbin Method for Content Based Landscape Image Retrieval ..................................................................................771
  Nguyen Huu Quynh and Ngo Quoc Tao
Feature Selection Based on Correlation between Fuzzy Features and Optimal Fuzzy-Valued Feature Subset Selection ....................................................................................................................775  
Jirong Li

Road Extraction in Remote Sensing Images Using a New Algorithm .............................................................................................................................................................................................779  
Hua Hu, Ying Liu, Xun Wang, Xia-jun Zhu, and Bin Xu

A Novel Information Entropy Shift Based Image Retrieval Algorithm ....................................................................................................................................................................................................783  
Yan Wang and Kebin Jia

A Unified System for Web Personal Image Retrieval .................................................................................................................................................................................................................787  
Lin Xie, Yao Zhao, and Zhenfeng Zhu

Content-Based Audio Retrieval Using Perceptual Hash .....................................................................................................................................................................................................................791  
Qiong Li, Jing Wu, and Xin He

B09: Video Signal Processing (2)

An Effective Motion Estimation Scheme for H.264/AVC .........................................................................................................................................................................................................................797  
Pengyu Liu and Kebin Jia

Deblocking Filter by Color Psychology Analysis for H.264/AVC Video Coders.......................................................................................................................................................................................................802  
Chia-Hung Yeh, Kai-Lin Huang, and Shiuun-Jang Chern

Motion Vector Re-estimation for Video Trans-coding with Arbitrary Downsizing........................................................................................................................................................................................................806  
Chih-Shan Liu, Wen-Li Wei, Nai-Chung Yang, and Chung-Ming Kuo

Path Virtualization Using Fountain Code for Video Streaming over Heterogeneous Networks........................................................................................................................................................................................................810  
Sang-Chun Han, Hwangjun Song, and Jun Heo

Subblock-Based BPE Scheme to Conquer Mismatch in Memory Access Pattern ........................................................................................................................................................................................................814  
Bao Feng Li and Yong Dou

A Cost-Efficient Bit-Serial Architecture for Sub-pixel Motion Estimation of H.264/AVC ........................................................................................................................................................................................................818  
Mohammad Reza Hosseiny Fatemi, Hasan F. Ates, and Rosli Salleh

Video Monitoring System Based on Amending Model of Motion Vector ................................................................................................................................................................................................................822  
Zu-jue Chen, Wei Jia, and Zhi-xiong Zhang

Framework for Distributed Video Surveillance in Heterogeneous Environment ........................................................................................................................................................................................................826  
Xiang Fu and Bao-long Guo

B10: Video Watermarking

A Real-Time Video Watermarking Using Adjacent Luminance Blocks Correlation Based on Compressed Domain........................................................................................................................................................................................................833  
Shaohui Liu, Tianhang Chen, Hongxun Yao, and Wen Gao
Broadcast Video Logo Detection and Removing ................................................................. 837
  Chung-Ming Kuo, Cheng-Ping Chao, Wei-Han Chang, and Jin-Long Shen

Digital Video Multicasting System with Seamless Handover Mechanism ....................... 841
  Ren-Guey Lee, Chun-Chieh Hsiao, Hsin-Hao Tseng, and Chih-Chun Lai

Self-Adaptive Video Watermarking Based on the Motion Characteristic Detection
and the Model of Entropy ........................................................................................................ 845
  Zhi Li and Xiao-Wei Chen

A Content-Adaptive Digital Watermarking Scheme in H.264/AVC Compressed Videos ........ 849
  Po-Chyi Su, Ming-Lun Li, and Ing-Fan Chen

Fragile Video Watermarking Technique by Motion Field Embedding with Rate-Distortion
Minimization .......................................................................................................................... 853
  Tien-Ying Kuo, Yi-Chung Lo, and Chen-I Lin

A Novel Watermarking Method for Wyner-Ziv Video Coding ........................................ 857
  Ning Zhu, Guiguang Ding, Yaguang Yin, and Jianmin Wang

B11: Pattern Recognition (2)

Face Recognition Based on Chaotic Fuzzy RBF Neural Network ........................................ 863
  Jian-liang Meng, Wan-qing Gao, Hui-jing Pang, and Wei-hua Niu

Shallow Semantic Parsing for Lexical Units in Chinese FrameNet ...................................... 867
  Xiaoyan Hao, Xiaoming Chang, and Kaiying Liu

An Algorithm for License Plate Recognition System for Non-stop Toll Stations ................. 873
  Bo Li, Zhi-Yuan Zeng, and Jian-Zhong Zhou

Grid Distance-Based Improving Accuracy Clustering Algorithm ....................................... 877
  Chunjiang Pang, Weixiang Cheng, and Weihua Niu

A Volume Segmentation Algorithm for Medical Image Based on K-Means
Clustering ............................................................................................................................. 881
  Xinwu Li

IGSOM: Incremental Clustering Based on Self-Organizing-Mapping ................................. 885
  Ming Liu, Yuan-Chao Liu, and Xiao-Long Wang

Image Recognition Based on a Novel Data Fusion Method ............................................. 891
  Qingdong Du, Jin Li, and Xiao Chen

B12: Optimization Techniques and Applications (1)

Parallel Genetic Algorithm Model Based on AHP and Neural Networks
for Enterprise Comprehensive Business .............................................................................. 897
  Xilong Qu, Jian Feng, and Wenfang Sun
Parameter Selection of Generalized Fuzzy Entropy-Based Thresholding Segmentation Method with Particle Swarm Optimization ........................................................901
   Bo Lei and Jiu-Lun Fan

Fault Diagnosis of Distribution System Based on Distributed Chaotic Fuzzy RBF Neural Networks ..................................................................................................................905
   Jian-liang Meng, Wan-qing Gao, Hui-jing Pang, and Wei-hua Niu

The FastICA Algorithm Based on Successive Approximations with Superior Convergence Rate ........................................................................................................................909
   Constantin Doru and Luminita State

Incomplete Points Cloud Data Surface Reconstruction Based on Neural Network ..............................................................................................................................913
   Xue-mei Wu, Gui-xian Li, and Wei-min Zhao

Parameters Optimization of Fuzzy Controller Based on Improved Particle Swarm Optimization .............................................................................................................917
   Dongyun Wang and Guan Wang

An Implementation of Fuzzy Clustering with Size and Shape Constraints ............................................................................................................................922
   Jian-hui Wang, Yan Jiang, and Hai-long Zhang

B13: Cross-Discipline Techniques (1)

An Optimal Predictive Polling Mechanism on EPON ..............................................................................................................................929
   Jin-Yu Zhang and Man-Gui Liang

Design and Implementation of a New Practical Grid ..............................................................................................................................933
   Li Ang, Geng Nan nan, and Gao Hong

Research on the Application of Six Sigma in Software Process Improvement ..................................................................................................................937
   Xiaosong Zhao, Zhen He, Fangfang Gui, and Shengqin Zhang

The Research of Trusted Computing Based on the Model of Trusted Meta Data of BSCM ...........................................................................................................941
   Liu Zhong

Configuring RBAC to Simulate Bell Model ..............................................................................................................................946
   Yong-Zhong He, Zhan Han, and Ye Du

Development on the Partial Discharge On-Line Monitoring System of Transformer Based on Embedded System ..............................................................................................950
   Dening Zhang, Shuguang Zhang, Xuesong Suo, Man Cheng, Hong Juan Kou, Xiang Ling Shi, Su Zhang, and Haiquan Li

Visualization and Cognition of Large-Scale Software Structure Using the k-Core Analysis ..................................................................................................................954
   Haohua Zhang, Hai Zhao, Wei Cai, Ming Zhao, and Guilan Luo

Research and Design of Autonomic Software Agent Architecture ..............................................................................................................................958
   Chuan-Sheng Zhou
B14: Watermarking Applications (2)

Source Code Watermarking Based on Function Dependency Oriented Sequencing.........................................................965
   Gaurav Gupta and Josef Pieprzyk

A New Approach against Color Attacks of Watermarked Images .................................................................969
   Abdelhamid Benhocine, Lamri Laouamer, Laurent Nana, and Anca Pascu

Watermark Detection Using Channel Estimation in the Quantization Based Watermarking System .................................................................973
   Cagatay Karabat and Mehmet Keskinoz

Variance-Classified Capacity Watermarking Using Discrete Cosine Transform......................................................977
   Jing-Ming Guo, Yu-Cheng Lu, and Jiann-Der Lee

Introducing a New Method for Estimation Image Complexity according to Calculate Watermark Capacity .................................................................981
   Farzin Yaghmaee and Mansour Jamzad

A Novel Relational Database Watermarking Algorithm for Joint Ownership .................................................................985
   Yu Fu, Tianyu Ye, Zhiguo Qu, Xinxin Niu, and Yixian Yang

Review on Copyright Marking Techniques of GIS Vector Data.................................................................................................989
   Anbo Li, Ying Chen, Bingxian Lin, Wei Zhou, and Guonian Li

A New Wavelet Watermark Scheme of Color Image Based on Chaotic Sequences .................................................................994
   Nian-sheng Liu, Guo-hao Yang, Dong-hui Guo, and L. L. Cheng

B15: Networking Applications (2)

Intelligent Hospital Space Platform Combined with RFID and Wireless Sensor Network .................................................................1001
   Sheng-Rong Huang, Gwo-Jun Horng, and Gwo-Jia Jong

Rethinking Retransmission Policy in Concurrent Multipath Transfer .......................................................................................1005
   Jiemin Liu, Hongxing Zou, Jingxin Dou, and Yuan Gao

Cooperative QoS-Aware Routing Algorithm Based on IEEE 802.11 Multi-rate over Mobile Ad Hoc Networks.................................1009
   Zae-Kwun Lee, Hwangjung Song, and Gyeong Cheol Lee

An Information Hiding Scheme for the MDC-OFDM Wireless Networks ....................................................................................1013
   Chuang Lin and Jeng-Shyang Pan

The Design and Analysis of Constraint Networks for Uncertain Temporal Interval Relations.................................................................1017
   Liguo Deng, Z. M. Ma, and Qiang Tong

Vehicle Information Communication Safety Combined with Mobile RFID System .................................................................1021
   Wen-Hao Hsieh, Chien-Jung Ho, and Gwo-Jia Jong
Mobile RFID Integration Home-Care System for Wireless Network .................................................................1025
  Jing-Cyun You, Yao-Lung Yeh, and Gwo-Jia Jong

Application of MAC-Based VLANs for Mobile Office in Campus Area Network ...........................................1029
  Ning Jiang and Liancheng Shan

**C01: Biometrics—From Sensors to Standardization**

Face Recognition Using Separate Layers of the RGB Image .............................................................................1035
  Patrick Bours and Kirsi Helkala

Biometric Fusion Using Enhanced SVM Classification ......................................................................................1043
  Menrit S. Fahmy, Amir F. Atiya, and Raafat S. Elfouly

Common Interface for Connecting of Low Profile Biometric Modules ............................................................1049
  R. Sanchez-Reillo, L. Mengibar-Pozo, M. G. Lorenz, and R. Alonso-Moreno

Visible-Spectrum Biometric Retina Recognition ..............................................................................................1056
  Halvor Borgen, Patrick Bours, and Stephen D. Wolthusen

Pseudo Identities Based on Fingerprint Characteristics ....................................................................................1063
  Nicolas Delvaux, Hervé Chabanne, Julien Bringer, Bruno Kindarji, Patrick Lindeberg, Johannes Midgren, Jeroen Breebaart, Ton Akkermans, M. van der Veen, R. Veldhuis, Els Kindt, Koen Simoens, Christoph Busch, Patrick Bours, Davrondzhon Gafurov, Bian Yang, Julien Stern, Carsten Rust, Bruno Cucinelli, and Dimitrios Skepastianos

Fuzzy Vault for 3D Face Recognition Systems .................................................................................................1069
  Thomas Franssen, Xuebing Zhou, and Christoph Busch

Experiments with Skin Resistance and Temperature for Liveness Detection ....................................................1075
  Martin Drahansky

Arm Swing as a Weak Biometric for Unobtrusive User Authentication ..........................................................1080
  Davrondzhon Gafurov and Einar Snekkenes

Biometric Systems and Data Protection Legislation in Germany .....................................................................1088
  Martin Meints, Heinz Biermann, Manfred Bromba, Christoph Busch, Gerrit Hornung, and Gisela Quiring-Kock

**C02: Intelligent Watermark Hiding and Digital Image Processing**

Steganalysis Based on Co-occurrence Matrix of Differential Image .................................................................1097
  Ziwen Sun, Maomao Hui, and Chao Guan

A New Iris Recognition Method Based on Gabor Wavelet Neural Network ..................................................1101
  Zhiping Zhou, Huijun Wu, and Qianxing Lv

Document Watermarking Robust to Copying ....................................................................................................1105
  Bin Luo and Li Li
A Robust Double Watermarking 3D Mesh Model Based on Feature .............................................................. 1109
   Xiaoqing Feng, Li Li, Zhigen Pan, Shusen Sun, and Daxing Zhang

Robust Remote Authentication for Scalable Web-Based Services .............................................................. 1113
   Jianbin Li, Kwok-Yan Lam, Hong-Wei Sun, and Siu-Leung Chung

Reversible Data Embedding Using the Sliding Window .............................................................................. 1118
   Chin-Feng Lee and Hsing-Ling Chen

A Blind Associative Watermark Detection Scheme Using Self-Embedding Technique .................................... 1122
   Chin-Feng Lee and Huai-En Lee

Software Integration for Applications with Audio Stream .............................................................................. 1126
   Jim-Min Lin, Wen-Gung Cheng, and Guo-Ming Fang

C03: Intelligent Watermarking Techniques, Image Authentication and Visual Cryptography (1)

The Distortion Control Method of Reversible Contrast Mapping Hiding Scheme ........................................... 1133
   Tzu-Chuen Lu and Ying-Hsuan Huang

A Robust Watermarking Algorithm Based on Salient Image Features .......................................................... 1137
   Yuan-Liang Tang and Chih-Peng Wang

Efficient Vector Quantization Codebook Generation Based on Histogram Thresholding Algorithm .................. 1141
   Chang-Chin Huang, Du-Shiau Tsai, and Gwoboa Horng

Secret Sharing Systems with Authentication-Based Steganography ............................................................. 1146
   Shiu-Jeng Wang, I-Shuan Lin, Ye-Lin Hsieh, and Chi-Yao Weng

An Effective Demosaicking and Zooming Algorithm for CFA Images .......................................................... 1150
   Chin-Feng Lee, Pei-Yan Pai, Wen-Hung Huang, and Chin-Chen Chang

A Computation Model for Capacity and Robustness of Robust Image Watermarking Scheme in Spatial Domain ................................................................................................................................. 1154
   Yan-Jun Hu, Xiao-Ping Ma, Lin-Ming Dou, and Li Gao

Research on the Capacity of Error-Correcting Codes-based Information Hiding ........................................... 1158
   Xuehu Yan, Shuai Guan, and Xiamu Niu

C04: Steganography and Watermarking

IWT-Based Watermarking by Adaptive Bit-Labeling Scheme ........................................................................ 1165
   Ching-Yu Yang, Wei-Ying Hwang, and Ya-Fen Cheng
Use of Quotient-Embedding Scheme with Smart Arrangement Technique to Hide Gray-Scale Data ........................................................................................................ ..................................1169
  Ching-Yu Yang and Chen-Yuan Lai

A Data Hiding Method with Capabilities for Information Authentication and Face Image Recovery in E-commerce Applications .................................................................1173
  Da-Chun Wu and Jian-Sheng Li

Enhance the Image Sharing with Steganography and Authentication ........................................................................................................ ..................................1177
  Chia-Chun Wu, Shang-Juh Kao, Wen-Chung Kuo, and Min-Shiang Hwang

Multi-purpose Image Watermarking Method Based on Wavelet Transform ........................................................................................................ .........................1182
  Chih-Hung Lin, Sheng-Lung Chien, and Hsiao-Fen Chien

Multipurpose Image Authentication Method Based on Vector Quantization ........................................................................................................ .........................1186
  Chih-Hung Lin, Hsiao-Fen Chien, and Sheng-Lung Chien

Robust Digital Image Watermarking Based on Haar Orthogonal Function System ........................................................................................................ .........................1190
  Minghui Deng, Fang Yang, and Jingbo Zhen

C05: Digital Communications

An FFT-Based DS-SS Signal Acquisition Algorithm Research........................................................................................................ .........................1197
  Jing Xue, Qi Zhao, and Zhijie Wu

The Design and Research of Remote Terminal Unit Based on Radio Technology ........................................................................................................ .........................1201
  Chuntao Man and Zhenqi Wang

Reduced-State Detection for Continuous Phase Modulation (CPM) Signals ........................................................................................................ .........................1205
  Zhang Nan and Yang Ping

Low-Complexity Real-Time LDPC Encoder Design for CMMB ........................................................................................................ .........................1209
  Peng Wang and Yong-en Chen

A Novel Soft-In-Soft-Out Decoder for Nordstrom-Robinson Code ........................................................................................................ .........................1213
  Huan Li, Zhiyong Zou, Xiaoxiang Zhao, and Kuang Wang

Wide-Band Low-Noise Quadrature VCO Design ........................................................................................................ .........................1217
  Yong-hong Yan, Yan Xie, Wei Peng, and Yun Zeng

Robust Non-blind Detection for Spread Spectrum Watermarking System ........................................................................................................ .........................1221
  Cagatay Karabat and Mehmet Keskinoz

A Novel Grading Noise-Pretreatment Algorithm Based on Time-Frequency Blind Source Separation ........................................................................................................ .........................1225
  Er-Fu Wang, Nai-Tong Zhang, and Wei-Xiao Meng

C06: Intelligent Signal and Image Processing (2)

Multiview Video Service Framework for 3D Mobile Devices ........................................................................................................ .........................1231
  Junsup Kwon, Manbae Kim, and Changyeol Choi
An Object Removal Using Multi-view Sequence Inpainting Technique

Soon-Young Lee, Jun-Hee Heu, Chang-Su Kim, and Sang-Uk Lee

Challenges and Realization of Real-Time Multi-view Video Transport Systems over IP Networks

Jongryool Kim, Koh Choi, Changhyeok Bae, and JongWon Kim

Efficient Prediction Structure for 2-D Wide Multi-view Video Sequence

Taeyoung Chung, Kwanwoong Song, and Chang-Su Kim

A Motion Vector Prediction Method for Multi-view Video Coding

Sang Heon Lee, Sang Hwa Lee, Nam Ik Cho, and Jeong Hyu Yang

Segment-Based Foreground Object Disparity Estimation Using Zcam and Multiple-View Stereo

Tae Hoon Kim, Hoyub Jung, Kyoung Mu Lee, and Sang Uk Lee

High Performance Hardware Implementation Architecture for DWT of Lifting Scheme

Yanling Hao, Ying Liu, and Renlong Wang

C07: Authentication

A User Authentication Scheme Based on Fingerprint and USIM Card

Xian-ge Huang, Lei Shen, and Yan-hong Feng

Audio Quality-Based Authentication Using Wavelet Packet Decomposition and Best Tree Selection

Fang Chen, Wei Li, and Xiaoqiang Li

A Novel Watermarking-Based Reversible Image Authentication Scheme

Tiegang Gao and Qiaolun Gu

Design and Implementation of Secure Active RFID System with Cryptography and Authentication Mechanisms

Hsi-Wen Wang, Chien-Chih Lai, Chun-Chieh Hsiao, Guan-Yu Hsieh, and Ren-Guey Lee

A New Variant of the Diffie-Hellman Key-Exchange Protocol Based on Block Triangular Matrix Groups

Jun Yang and Xianze Yang

Efficient Many-to-One and One-to-Many Multiparty Quantum Secure Direct Communication with Authentication

Wenjie Liu, Hanwu Chen, Zhiqiang Li, and Jun Zhao

A 3D Model Authentication Algorithm Based on Reversible Watermarking

XiaMu Niu, Wei Song, Meiyu Lu, and Wenjun Huang
C08: Intelligent Watermarking Techniques, Image Authentication and Visual Cryptography (2)

Hiding Data in VQ-Compressed Images Using Pairwise Nearest Codewords Based on Minimum Spanning Tree .............................................................. 1293
   Chin-Feng Lee, Chin-Chen Chang, and Kuo-Hua Wang

An Image Authentication Scheme for Halftone Images Based upon Error Diffusion ................................................................. 1297
   Jun-Chou Chuang and Chin-Chen Chang

Twice Grid Colorings in Steganography ................................................................................................................. 1301
   Weiming Zhang, Xinpeng Zhang, and Shuozhong Wang

A New Probabilistic Visual Secret Sharing Scheme for Color Images ................................................................................................. 1305
   Chin-Chen Chang, Chia-Chen Lin, T. Hoang Ngan Le, and Hoai Bac Le

Covert Communication Based on Subliminal Channel in Broadcast Multi Signature ................................................................. 1309
   Tao Meng, Jianfeng Wang, and Shenghe Sun

A Color Image Digital Watermarking Method Based on Valve-Value Surface ......................................................................................... 1312
   Zhihua Hu and Jiping Niu

Analysis Based on Generalized Vector Quantization for Information Hiding ............................................................................................. 1316
   Chun-e Zhang, Zhengding Qiu, L. L. Cheng, and L. M. Cheng

A Blocking-Resistant Method for Anonymity System Based on Proxy and Data Hiding .............................................................................. 1321
   Yong Zhang, Jianfeng Yin, and Benyang Dai

C09: Cryptography (2)

Based MATLAB on Advanced Encryption Standard (AES) IP Validation ............................................................................................. 1329
   Xinsheng Wang, Liang Han, Chenxu Wang, and Xiaoning Liu

Breaking Instance II of New TTM Cryptosystems ................................................................................................................................. 1332
   Xuyun Nie, Xin Jiang, Lei Hu, Jintai Ding, and Zhiguang Qin

Secure Communication Based on Synchronization of Unified Chaotic Systems .................................................................................... 1336
   Shao-cheng Qu, Xiao-yan Wang, and Mei-jing Gong

A Novel Symmetric Image Encryption Approach Based on a New Invertible Two-Dimensional Map ........................................................................ 1340
   Feng Huang and Fangfang Lei

A Public Key Cryptography Based Algorithm for Watermarking Relational Databases .............................................................................. 1344
   Haiting Cui, Xinchun Cui, and Mailing Meng

New Color Image Encryption Algorithm Based on Chaotic Sequences Ranking ............................................................................................. 1348
   Jian-liang Meng, Hui-jing Pang, and Wan-qing Gao

xxvi
A Multiple Encryption Algorithm for 2D Engineering Graphic Based on Fourier Descriptors and Chaos Scrambling

Tao Deng, Fei Peng, and Xiaofeng Huang

1352

NCPA: A Scheduling Algorithm for Multi-cipher and Multi-mode Reconfigurable Cryptosystem

Chung-Ping Young, Chung-Chu Chia, Liang-Bi Chen, and Ing-Jer Huang

1356

C10: Network Security (1)

Assigning Keys in a Hierarchy

Jieh-Shan Yeh, Shang-Ru Yang, Chin-Chen Chang, and Tzung-Her Chen

1363

A Novel Digital Signature Scheme for Application of Document Review in a Linearly Hierarchical Organization

Iuon-Chang Lin and Chin-Chen Chang

1367

An Effective Priority Queue-Based Scheme to Alleviate Malicious Packet Flows from Distributed DoS Attacks

Chu-Hsing Lin, Jung-Chun Liu, Fuu-Cheng Jiang, and Chien-Ting Kuo

1371

An Improved Authentication Key Agreement Protocol Based on Elliptic Curve for Wireless Mobile Networks

Chin-Chen Chang and Shih-Chang Chang

1375

Aryabhata Remainder Theorem for Moduli with Common Factors and Its Application in Information Protection Systems

Jen-Ho Yang and Chin-Chen Chang

1379

A Fractional-Step DDoS Attack Source Traceback Algorithm Based on Autonomous System

Zhaoyang Qu and Chunfeng Huang

1383

Covert Channels Based on Jitter Field of the RTCP Header

Linda Yunlu Bai, Yongfeng Huang, Guannan Hou, and Bo Xiao

1388

Distinguishing Attack on SN3 Stream Cipher

Mohammad Ali Orumiehchi and S. Fahimeh Mohebbipoor

1392

C11: Pattern Recognition (3)

DTW/ISODATA Algorithm and Multilayer Architecture in Sign Language Recognition with Large Vocabulary

Xiaoyu Wang, Feng Jiang, and Hongxun Yao

1399

Printed Chinese Character Recognition Based on Pixel Distribution Probability of Character Image

Ning Wang

1403
Emotion Recognition of Finger Braille
Yasuhiro Matsuda, Tsuneshi Isomura, Ichiro Sakuma, Yasuhiro Jimbo,
Etsuko Kobayashi, and Tatsuhiko Arafune

The Research of Vehicle Driving Multimedia Data Recording
Meng Hao and Sun Fukang

A Combined Static and Dynamic Software Birthmark Based on Component
Dependence Graph
Xiaoming Zhou, Xingming Sun, Guang Sun, and Ying Yang

Image Mosaic Based on SIFT
Zhan-Long Yang and Bao-Long Guo

A New Face Recognition Scheme with Renewable Templates
Wenjun Huang, Xin Yu, Qiong Li, and Xiamu Niu

C12: Optimization Techniques and Applications (2)

A Method on Impedance Control of Robots Based on the Neural Network
Zhen Yang and Mu-hai Li

New Neural Network Based on Ant Colony Algorithm for Financial Data Forecasting
W. Gao

The Heuristic Route Algorithm of Multiple Restrictions Based on Quality of Service
Fu-sheng Dai and Xian-he Shao

An Optimized Approach on Reduced Kernel Matrix to ClusterSVM
Ya-Li Qi, Wei He, and Hou Shu

On Ant Colony Algorithm for Solving Continuous Optimization Problem
Li Hong and Xiong Shibo

Design Theory of Intellectualized Computer Aided Instruction and
Its Applications
Aimin Wang and Wenhua Liu

Particle Swarm Optimization for Gray-Scale Image Noise Cancellation
Te-Jen Su, Tzu-Hsiang Lin, and Jia-Wei Liu

BP Neural Network to Distinguish Pregnant Woman by Arterial Pressure
Pulse Waveform Analysis
Lu Wang and Dianzhong Wen

C13: Cross-Discipline Techniques (2)

An Efficient USR Eliminating Mechanism on EPON
Jin-Yu Zhang and Man-Gui Liang
Application Research of Secondary Development Technology for the Replacement of Furniture Part Based on Inventor API

Lexiao Ye, Yigang Wang, Dajian Liu, and Jianqi Chen

Research and Implementation on Middleware of Database Workload Autonomic Adaptation

Fu Duan, Yuxing Wang, Chanchan Zhao, and Yueqin Zhang

Trust Evaluation Model for Composite Service Based on Subjective Logic

Meihua Chen, Liang He, Xuming Cai, and Weiwei Xia

WBISD: A Debugger of Web-Based Interactive Services

Lei Liu and Hong Ni

Research and Analysis of Bias Voltage on Variable-Capacitance Micro-mechanical Accelerometer

Xuemei Hu and Linhong Tian

The Research on Non-destructive Testing Method of Sheet Resistance in Micro Area of Silicon Wafer Based on EIT Technology

Xinfu Liu, Jinhe Liu, Zhanping Du, Quanming Zhao, Junying Zhao, and Yuhui Huang

Research on Communication Constellation Simulation Based on Exploratory Analysis

Ying Yang, Ying-Hua Li, and Yong Li

C14: Data Hiding and Steganography (2)

A Statistical Attack on a Kind of Word-Shift Text-Steganography

Lingjun Li, Liusheng Huang, Xinxin Zhao, Wei Yang, and Zhili Chen

Improvements of Image-Steganalysis Using Boosted Combinatorial Classifiers and Gaussian High Pass Filtering

Nima Asadi, Mansour Jamzad, and Hedieh Sajedi

Implementation of Covert Communication Based on Steganography

Yongfeng Huang, Bo Xiao, and Honghua Xiao

Steganalysis of Data Hiding for Two-Dimensional Engineering Graphics Based on Characters Statistic

Fei Peng and Xingming Sun

New Steganography Scheme in Halftone Images

Ching-Nung Yang, Yao-Yu Yang, Tse-Shih Chen, and Guo-Cin Ye

A New Synonym Text Steganography

M. Hassan Shirali-Shahreza and Mohammad Shirali-Shahreza

Steganalysis of LSB Matching Based on Co-occurrence Matrix and Removing Most Significant Bit Planes

M. Abolghasemi, H. Aghainia, K. Faez, and M. A. Mehrabi
C15: Network Security (2)

An Iris Cryptosystem for Information Security ................................................................. 1533
  Xiangqian Wu, Ning Qi, Kuanquan Wang, and David Zhang

An Efficient Proxy Signature Scheme for Realizing Generalized Proxy Signing Policy .......... 1537
  Iuon-Chang Lin, Chin-Chen Chang, and Jen-Ho Yang

An Efficient Non-repudiation Mechanism for SIP-Based Services ........................................ 1541
  Ming-Way Huang, Hsing-Bai Chen, and Wei-Bin Lee

Preserving PHI in Compliance with HIPAA Privacy/Security Regulations
Using Cryptographic Techniques ......................................................................................... 1545
  Jing Li, Jung-San Lee, and Chin-Chen Chang

Programming Method for Failure of Network Security Based on Game Model ....................... 1549
  Xuansen He

A Grid Resource Discovery Model Using P2P Technology ..................................................... 1553
  Zenggang Xiong, Yang Yang, Xuemin Zhang, Ming Zeng, and Li Liu

ASCON—A Synchronization-Concurrency Control Model for Distributed
Multimedia Systems ............................................................................................................ 1557
  Janani Arthanari and A. Kannan

Communications Security Research on “Man-in-the-Loop” Television Guidance
System Data Link ................................................................................................................. 1561
  Chao Sun, Yukun Liu, and Shouda Jiang

Author Index ....................................................................................................................... 1565
