Proceedings

ISORC 2007

Table of Contents

Message from the Symposium Co-Chairs ................................................................. xi
Message from the Program Co-Chairs ..................................................................... xii
Committees ............................................................................................................... xiii

Session 1: Technology Trends

A Systematic Approach to Domain-Specific Language Design Using UML ..................... 2
Bran Selic

Periodic Finite-State Machines .................................................................................. 10
H. Kopetz, C. El-Salloum, B. Huber, and R. Obermaisser

Engineering Self-Coordinating Real-Time Systems .................................................. 21
Franz J. Rammig

Efficient Adaptations of the Non-blocking Buffer for Event Message Communication between Real-Time Threads ............................................................. 29
K. H. Kim, Juan A. Colmenares, and Kee-Wook Rim

Session 2: Component-Based Software Development

A Unified Benchmarking Process for Components in Automotive Embedded Systems Software ...........................................................................................................41
Wolfgang Forster, Christof Kutscher, Dietmar Schreiner, and Karl M. Göschka
A New Specification of Software Components for Embedded Systems ..........................................................46
Takuya Azumi, Masanari Yamamoto, Yasuo Kominami, Nobuhisa Takagi,
Hiroshi Oyama, and Hiroaki Takada

A Component-Based Methodology to Design Arbitrary Failure Detectors
for Distributed Protocols ..........................................................................................................................51
Roberto Baldoni, Jean-Michel Hélary, and Sara Tucci Piergiovanni

Middleware................................................................................................................................................62
Amogh Kavimandan, Krishnakumar Balasubramanian, Nishanth Shankaran,
Aniruddha Gokhale, and Douglas C. Schmidt

Session 3: Fundamental Issues in Distributed RT Computing

A Timing Assumption and a $t$-Resilient Protocol for Implementing an Eventual Leader
Service in Asynchronous Shared Memory Systems .....................................................................................71
Antonio Fernández, Ernesto Jiménez, Michel Raynal, and Gilles Trédan

Detection of Fractal Breakdowns by the Novel Real-Time Pattern Detection Model
(Enhanced-RTPD + Holder Exponent) for Web Applications ........................................................................79
Wilfred W. K. Lin, Allan K. Y. Wong, Tharam S. Dillon, and Elizabeth Chang

Time-Predictable Task Preemption for Real-Time Systems with Direct-Mapped
Instruction Cache........................................................................................................................................87
Raimund Kirner and Peter Puschner

Session 4A: Real-Time Java

A Profile for Safety Critical Java................................................................................................................94
Martin Schoeberl, Hans Søndergaard, Bent Thomsen, and Anders P. Ravn

Predictable Serialization in Java..............................................................................................................102
Daniel Tejera, Alejandro Alonso, and Miguel A. de Miguel

Allowing Cycles References among Scoped Memory Areas in the Real-Time
Specification of Java..................................................................................................................................110
M. T. Higuera Toledano

Integrating Priority Inheritance Algorithms in the Real-Time Specification
for Java ....................................................................................................................................................115
Andy Wellings, Alan Burns, Osmar Marchi dos Santos, and Benjamin M. Brosgol

Session 4B: Software Design

Analyzing Behavior of Concurrent Software Designs for Embedded Systems ...........................................124
Robert G. Pettit IV and Hassan Gomaa
Towards a Layered Architecture for Object-Based Execution in Wide-Area
Deeply Embedded Computing................................................................. 133
Tarek Abdelzaher, Qing Cao, Raghu Ganti, Dan Henriksson, Maifi Khan,
Jin Heo, Chengdu Huang, Praveen Jayachandran, Hieu Khac Le, Liqian Luo,
and Yu-En Tsai

On Rigorous Design and Implementation of Fault Tolerant Ambient Systems .................................................. 141
Alexei Iliasov, Alexander Romanovsky, Budi Arief, Linas Laibinis, and
Elena Troubitsyna

Design of Secure CAMIN Application System Based on Dependable and
Secure TMO and RT-UCON...................................................................... 146
Jungin Kim and Bhavani Thuraisingham

Session 5A: Wireless and Mobile Networks

Efficient Data Transmission in a Lossy and Resource Limited Wireless
Sensor-Actuator Network ........................................................................ 156
Kiyohiro Morita, Kenichi Watanabe, Naohiro Hayashibara, Tomoya Enoki do,
and Makoto Takizawa

Search-Oriented Deployment Strategies for Wireless Sensor Networks ............................................................. 164
Jiun-Jian Chang, Pi-Cheng Hsiu, and Tei-Wei Kuo

Data Dissemination for Wireless Sensor Networks .................................................................................................. 172
Min-Gu Lee and Sunggu Lee

Session 5B: Middleware

A Novel Synchronous Scheduling Service for CORBA-RT Applications................................................................. 181
Isidro Calvo, Luis Almeida, and Adrián Noguero

Using Multi-agent Principles for Implementing an Organic Real-Time Middleware ................................................... 189
Manuel Nickschas and Uwe Brinkschulte

Security Analysis of the Utilization of Corba Object References as Authorization Tokens............................... 196
Christoph Becker, Sebastian Stuamann, and Ralf Salomon

Session 6A: Component Execution Support

A Comparative Evaluation of EJB Implementation Methods ................................................................. 204
Andreas Stylianou, Giovanna Ferrari, and Paul Ezhilchelvan

Real-Time Dynamic Guarantee in Component-Based Middleware ........................................................................ 214
Cássia Yuri Tatibana, Carlos Montez, and Rômulo Silva de Oliveira

Evaluating Real-Time Publish/Subscribe Service Integration Approaches
in QoS-Enabled Component Middleware ........................................................................................................ 222
Gan Deng, Ming Xiong, Aniruddha Gokhale, and George Edwards
Session 6B: Sensor Networks

TMO-NanoQ+: A Real-Time Kernel for Sensor Networks Supporting Time-Triggered and Message-Triggered Tasks
Jae-An Yi, Shin Heu, Byoungkyu Choi, Hyun-Ju Kim, Hanseok Sue, and Jung-Guk Kim

Toward a Generic and Secure Software Platform for Sensor Network Nodes
Yukikazu Nakamoto, Shuhei Higashiyama, Narutaka Chiba, Michio Kaneko, and Yoko Furuzumi

Session 7A: Distributed Systems

QoS Management of Real-Time Data Stream Queries in Distributed Environments
Yuan Wei, Vibha Prasad, and Sang H. Son

An Architecture to Support Dynamic Service Composition in Distributed Real-Time Systems
Iria Estévez-Ayres, Luís Almeida, Marisol García-Valls, and Pablo Basanta-Val

An Approach to Automated Agent Deployment in Service-Based Systems
Stephen S. Yau, Luping Zhu, Dazhi Huang, and Haishan Gong

Session 7B: Scheduling and Resource Management

System-Level Energy-Efficiency for Real-Time Tasks
Chuan-Yue Yang, Jian-Jia Chen, Chia-Mei Hung, and Tei-Wei Kuo

Compositional Schedulability Analysis of Hierarchical Real-Time Systems
Arvind Easwaran, Insup Lee, Insik Shin, and Oleg Sokolsky

Enterprise Job Scheduling for Clustered Environments
Sratos Paulakis, Vassileios Tsetsos, and Stathis Hadjiefthymiades

Session 8A: Model-Driven Development

Design and Performance Evaluation of Configurable Component Middleware for End-to-End Adaptation of Distributed Real-Time Embedded Systems
Nishanth Shankaran, Douglas C. Schmidt, Xenofon D. Koutsoukos, Yingmin Chen, and Chenyang Lu

Independent Model-Driven Software Performance Assessments of UML Designs
Julie A. Street, Robert G. Pettit, and Hassan Gomaa

Combining Model Processing and Middleware Configuration for Building Distributed High-Integrity Systems
Jérôme Hugues, Bechir Zalila, and Laurent Pautet
Session 8B: Embedded Systems

LSynD: Localized Synopsis Diffusion .................................................................313
   Andreea Berfield, Panos K. Chrysanthis, and Daniel Mossé

An Efficient Algorithm for Online Soft Real-Time Task Placement on
Reconfigurable Hardware Devices .................................................................321
   Jin Cui, Zonghua Gu, Weichen Liu, and Qingxu Deng

Hardware-Near Programming in the Common Language Infrastructure ..........329
   Stefan Richter, Andreas Rasche, and Andreas Polze

Device Modeling for a Flexible Embedded Systems Development Process ........337
   Kleanthis C. Thamboulidis, George S. Doukas, and Giannis V. Kounoutsos

Session 9A: Handling Time Faults

On Best-Effort Real-Time Assurances for Recovering from Distributable Thread
Failures in Distributed Real-Time Systems ......................................................344

Real-Time Tasks Scheduling with Value Control to Predict Timing Faults
during Overload ..............................................................................................354
   Crineu Tres, Leandro Buss Becker, and Edgar Nett

A Wide Area Network Emulator for CORBA Applications ............................359
   Mohammad Alsaeed and Neil A. Speirs

Session 9B: Execution Time Analysis and Program Verification

An Iterative Refinement Framework for Tighter Worst-Case Execution
Time Calculation ..............................................................................................365
   Ho Jung Bang, Tai Hyo Kim, and Sung Deok Cha

Automated Formal Verification and Testing of C Programs for Embedded Systems 373
   Susanne Kandl, Raimund Kirner, and Peter Puschner

Experiences from Applying WCET Analysis in Industrial Settings ..................382
   Jan Gustafsson and Andreas Ermedahl

Session 10A: Execution Support for Distributed Systems

XtreemOS: A Grid Operating System Making Your Computer Ready for Participating
in Virtual Organizations ............................................................................393
   Christine Marin
Exploiting Tuple Spaces to Provide Fault-Tolerant Scheduling on Computational Grids
Fábio Favarin, Joni da Silva Fraga, Lau Cheuk Lung, Miguel Correia, and João Felipe Santos

Session 10B: UML and Modeling

Timed-Automata Semantics and Analysis of UML/SPT Models with Concurrency
Abdelouahed Gherbi and Ferhat Khendek

Fabrice Kordon

An Aspect-Oriented Approach for Dealing with Non-functional Requirements in a Model-Driven Development of Distributed Embedded Real-Time Systems
Marco A. Wehrmeister, Edison P. Freitas, Carlos E. Pereira, and Flávio R. Wagner
