2011 14th IEEE International Symposium on Object/Component/Service-Oriented Real-Time Distributed Computing Workshops

ISORCW 2011

Table of Contents

AMICS 2011 Message from the Workshop Co-chairs .......................................................... viii
AMICS 2011 Committees ........................................................................................................ ix
MoBE-RTS 2011 Message from the Workshop Co-chairs ..................................................... x
MoBE-RTS 2011 Committees .................................................................................................... xi
SORT 2011 Message from the Workshop Co-chairs ............................................................. xii
SORT 2011 Committees ........................................................................................................... xiii
WORNUS 2011 Message from the Workshop Co-chairs ....................................................... xiv
WORNUS 2011 Committees ..................................................................................................... xv

AMICS 2011

Optimization of Time-Partitions for Mixed-Criticality Real-Time Distributed Embedded Systems ................................................................. 1
   Domitian Tamas-Selicean and Paul Pop

Synthesis of Static Communication Schedules for Mixed-Criticality Systems ................................................................. 11
   Wilfried Steiner

Suitability of Hypervisor and MPSoC Architectures for the Execution Environment of an Integrated Embedded System ............................................................................. 19
   M. Azkarate-askasua, I. Martinez, X. Iturbe, and R. Obermaisser

Proving Memory Separation in a Microkernel by Code Level Verification ................................................................. 25
   Christoph Baumann, Thorsten Bormer, Holger Blasum, and Sergey Tverdyshev

   Eva Beckschulze, Jörg Brauer, André Stollenwerk, and Stefan Kowalewski

Method and Tools for Mixed-Criticality Real-Time Applications within PharOS ................................................................. 41
   Matthieu Lemerre, Emmanuel Ohayon, Damien Chabrol, Mathieu Jan, and Marie-Bénédicte Jacques

Performance Analysis of Time-Triggered Ether-Networks Using Off-the-Shelf-Components ................................................................. 49
   Florian Bartols, Till Steinbach, Franz Korf, and Thomas C. Schmidt
MultiChipSat Fault-Tolerant Architecture ................................................................. 57
Matthew M. McCormack and Alvar Saenz-Otero

MoBE-RTES 2011
An Invariant Preserving Transformation for PLC Models ........................................... 63
Jan Olaf Blech, Anton Hattendorf, and Jia Huang

Product Model Derivation by Model Transformation in Software Product Lines .......... 72
Rasha Tawhid and Dorina C. Petriu

Component-Based Hazard Analysis for Mechatronic Systems ................................... 80
Claudia Priesterjahn, Christoph Sondermann-Wölke, Matthias Tichy, and Christian Hölscher

Model-Based Hardware Generation and Programming - The MADES Approach .......... 88
Ian Gray, Nikos Matragkas, Neil C. Audsley, Leandro Soares Indrusiak, Dimitris Kolovos, and Richard Paige

Architectural Design Patterns for Flight Software .......................................................... 97
Julie Street Fant, Hassan Gomaa, and Robert G. Pettit

SORT 2011
Abstract Infrastructure for Real Systems: Reflection and Autonomy in Real Time .......... 102
Christopher Landauer

Knowledge Representation and Awareness in Autonomic Service-Component Ensembles – State of the Art ................................................................. 110
Emil Vassev and Mike Hinchey

Developing Mechanisms for Determining “Good Enough” in SORT Systems ............... 120
Kirstie L. Bellman and Phyllis R. Nelson

A Lazy Algorithm for Distributed Priority Assignment in Real-Time Systems .......... 126
Moritz Neukirchner, Steffen Stein, and Rolf Ernst

A Service Discovery Approach for Testing Dynamic SOAs ........................................ 133
Andrea Ceccarelli, Marco Vieira, and Andrea Bondavalli

Middleware Support for a Self-Configurable Wireless Sensor Network .................. 143
Marcelo Götz, Achim Rettenberg, and Ina Podolski

Using Transactional Memory to Synchronize an Adaptive Garbage Collector in Real-Time Java ................................................................. 152
M. Teresa Higuera-Toledano

Analytical Model for the Optimization of Self-Organizing Image Processing Systems Utilizing Cellular Automata ................................................................. 162
Marc Reichenbach, Michael Schmidt, and Dietmar Fey

Ordering of Time-Dependent Tasks for Self-Organized Resource Scheduling .......... 172
Mathias Pacher, Uwe Brinkschulte
Towards Dependability-Aware Design of Hardware Systems Using Extended Program State Machines .......................... 181
  
  Kim Grütter, Andreas Herrholz, Ulrich Kühne, Daniel Große, Achim Rettberg, Wolfgang Nebel, and Rolf Drechsler

Accurate Temperature Measurements for Medical Research Using Body Sensor Networks .................. 189
  Carlo Alberto Boano, Matteo Lasagni, Kay Römer, and Tanja Lange

Self-Organizing Real-Time Service Dissemination and Collection Using Mobile Agents for Mobile Ad Hoc Networks .................................. 199
  Tomoyuki Ohta, Takeshi Hashimoto, and Yoshiaki Kakuda

Self-Reconfiguration for Fault-Tolerant FlexRay Networks ................................................................. 207
  Kay Klobedanz, Andreas Koenig, Wolfgang Mueller, and Achim Rettberg

Self-Organized Cooperation in Swarm Robotics .............................................................................. 217
  Yara Khaluf, Emi Mathews, and Franz J. Rammig

WORNUS 2011

Using a Local Prefetch Strategy to Obtain Temporal Time Predictability ................................................. 227
  Bekim Cilku and Peter Puschner

Timely Virtual Machine Migration for Pro-active Fault Tolerance ...................................................... 234
  Andreas Polze, Peter Tröger, and Felix Salfner

A Survey of Security Concepts for Common Operating Environments ................................................. 244
  Joseph Loyall, Kurt Rohloff, Partha Pal, and Michael Atighetchi

Dependability Concerns in Model-Driven Engineering ........................................................................ 254
  Leonardo Montecchi, Paolo Lollini, and Andrea Bondavalli

Challenges for Creating Highly Dependable Service Based Systems .................................................. 264
  Sean Banerjee, Hema Srikanth, and Bojan Cukic

Vision-Based Autonomous Landing for Small-Scale Unmanned Rotorcraft ....................................... 274
  Dongwoon Jeon, Kiho Cho, and Doo-Hyun Kim

Task-Level Probabilistic Scheduling Guarantees for Dependable Real-Time Systems – A Designer Centric Approach .............................................................................. 281
  Hüseyin Aysan, Radu Dobrin, and Sasikumar Punnekkat

Virtual Software Execution Environments for Distributed Embedded Control Systems ................... 288
  Yukikazu Nakamoto, Kenji Yabuuchi, and Tatsunori Osaki

Intelligent Agent Software Development Using AUML and the Descartes Specification Language ....... 297
  Vinitha Hannah Subburaj and Joseph Urban

Live Streaming of Medical Data - The Fontane Architecture for Remote Patient Monitoring and Its Experimental Evaluation ................................................................. 306
  Alexander Schacht, Robert Wierschke, Martin Wolf, Martin von Löwis, and Andreas Polze

Author Index ............................................................................................................................................ 313
