2016 IEEE 27th International Symposium on Software Reliability Engineering Workshops
ISSREW 2016

Table of Contents

Message from the ISSRE 2016 General Chair.................................................................xi
Message from the Industry Chairs of ISSRE 2016.........................................................xii
Industry Track Program Committee.............................................................................xiii
Fast Abstract Program Committee..............................................................................xiv
Message from the WoSAR 2016 Chairs.......................................................................xv
WoSAR 2016 Workshop Committees...........................................................................xvi
Message from the IWPD 2016 Workshop Organizers....................................................xviii
IWPD 2016 Workshop Committees.............................................................................xix
Message from the WoSoCer 2016 Chairs.................................................................xx
WoSoCer 2016 Workshop Committees........................................................................xxi
IWSF 2016 Organizing Committee.......................................................................xxii
Message from the FVPE 2016 Workshop Organizers...............................................xxiii
FVPE 2016 Workshop Committees ........................................................................xxiv

Industry Track

Best Paper Candidates

Dependability Challenges in the Model-Driven Engineering of Automotive Systems .........................................................1
Rakshith Amarnath, Peter Munk, Eike Thaden, Arne Nordmann, and Simon Burton

A Platform for Automating Chaos Experiments ..............................................................................................................5
Aaron Blohowiak, Ali Basiri, Lorin Hochstein, and Casey Rosenthal

Using Learning Styles to Staff and Improve Software Inspection Team Performance ..........................................................9
Anurag Goswami, Gursimran S. Walia, and Urvashi Rathod
Reliability through Test and Certification

An Amanat-Based Multi-party Certification Protocol for Outsourced Software in Automotive Systems .................................................................13

Chung-Wei Lin, Shinichi Shiraishi, and BaekGyu Kim

Time and Space Partitioning Using On-Board Software Reference Architecture .................................................................17

Victor Bos, Timo Vepsäläinen, Yuliya Prokhorova, and Timo Latvala

A Framework to Support Generation and Maintenance of an Assurance Case .................................................................21

Chung-Ling Lin, Wuwei Shen, and Steven Drager

A Model Based Systems Engineering Approach to Resiliency Analysis of a Cyberphysical System .................................................................25

Myron Hecht

Increasing Quality in an Agile Industry

Bug Bash: An Efficient Approach to Increase Test Coverage and Ensure Product Quality in an Agile Environment .................................................................29

Uma M. Balasubramani, Kartik Iyer, Balaji S. Krishnan, and Hema Kovvuri

Lessons Learned: Using a Static Analysis Tool within a Continuous Integration System .................................................................37

Claude Bolduc

Case Study: Project Management Using Cross Project Software Reliability Growth Model Considering System Scale .................................................................41

Kiyoshi Honda, Nobuhiro Nakamura, Hironori Washizaki, and Yoshiaki Fukazawa

Fast Abstracts

Error Abstraction Accuracy and Fixation during Error-Based Requirements Inspections .................................................................45

Vaibhav Anu, Gursimran Walia, Wenhua Hu, Jeffrey C. Carver, and Gary Bradshaw

Analysis on Causal-Effect Relationship in Effort Metrics Using Bayesian LiNGAM .................................................................47

Masanari Kondo and Osamu Mizuno

Software Reliability Modeled on Contagion .................................................................49

Nestor Ruben Barraza

A Study of Redundant Metrics in Defect Prediction Datasets .................................................................51

Jirayus Jiarpakdee, Chakkrit Tantithamthavorn, Akinori Ihara, and Kenichi Matsumoto

Verifying the Consistency of UML Models .................................................................53

Damiano Torre

Software Reliability and Security: Challenges and Crosscutting Themes .................................................................55

Lance Fiondella, Allen Nikora, and Thierry Wandji
Eighth International Workshop on Software Aging and Rejuvenation (WoSAR 2016)

Perspectives on SAR Research
A Systematic Mapping Review of the First 20 Years of Software Aging and Rejuvenation Research .................................................................57
   Nathalia Assis Valentim, Autran Macedo, and Rivalino Matias Jr.

Experimental Analysis of Software Aging
Antipattern-Based Problem Injection for Assessing Performance and Reliability Evaluation Techniques .................................................................64
   Philipp Keck, André Van Hoorn, Dušan Okanović, Teerat Pitakrat, and Thomas F. Düllmann
Software Aging Detection Based on Differential Analysis: An Experimental Study .................................................................71
   Rivalino Matias Jr, Guilherme O. de Sena, Artur Andrzejak, and Kishor S. Trivedi
Analysis of Software Aging in Android .................................................................78
   Caisheng Weng, Jianwen Xiang, Shengwu Xiong, Dongdong Zhao, and Chunhui Yang
An Empirical Study of Software Aging Manifestations in Android .................................................................84
   Yu Qiao, Zheng Zheng, and Fangyun Qin

Software Rejuvenation Techniques and Models
NPI-Based Adaptive Software Rejuvenation Schedule under Random Censoring .................................................................91
   Koichiro Rinsaka, W. Eric Wong, and Tadashi Dohi
A Phase Expansion Approach for Transient Analysis of Software Rejuvenation Model .................................................................98
   Hiroyuki Okamura and Tadashi Dohi
An Experimental Implementation of Software Rejuvenation in Time Warp Simulation .................................................................104
   Mamoru Ohara and Satoshi Fukumoto
Workload-Dependent Software Aging Impact on Performance and Energy Consumption in Server Virtualized Systems .................................................................111
   Mohamed Escheikh, Zaynab Tayachi, and Kamel Barkaoui

First International Workshop on Software Faults (IWSF 2016)

Session 1: Understanding Software Faults in Various Domains
The Relationship between Software Bug Type and Number of Factors Involved in Failures .................................................................119
   Zachary B. Ratliff, D. Richard Kuhn, Raghu N. Kacker, Yu Lei, and Kishor S. Trivedi
Programming the Network: Application Software Faults in Software-Defined Networks ................................................................. 125

Lalita J. Jagadeesan and Veena Mendiratta

On Automatic Detection of Performance Bugs .................................................. 132

Sokratis Tsakiltsidis, Andriy Miranskyy, and Elie Mazzawi

Session 2: Detection of Software Faults

GPU Acceleration of Document Similarity Measures for Automated Bug Triaging ................................................................. 140

Tim Dunn, Natasha Kholgade Banerjee, and Sean Banerjee

Healing Data Loss Problems in Android Apps .............................................. 146

Oliviero Riganelli, Daniela Micucci, and Leonardo Mariani

TestEX: A Search Tool for Finding and Retrieving Example Unit Tests from Open Source Projects ............................................. 153

Danielle Gonzalez, Andrew Popovich, and Mehdi Mirakhorli

Seventh IEEE International Workshop on Program Debugging (IWPD 2016)

Session 1

Session 2: Concurrency

Replaying Harmful Data Races in Android Apps ............................................ 160

Quan Sun, Lei Xu, Lin Chen, and Weifeng Zhang

Session 3: Analysis and Debugging

Static Spreadsheet Analysis ........................................................................ 167

Patrick W. Koch, Birgit Hofer, and Franz Wotawa

The Slice Navigator: Focused Debugging with Interactive Dynamic Slicing .................................................................................. 175

Arian Treffer and Matthias Uflacker

Bayesian Network Based Program Dependence Graph for Fault Localization ............................................................................. 181

Xiao Yu, Jin Liu, Zijiang James Yang, Xiao Liu, Xiaofei Yin, and Shijie Yi

Session 4

Session 5: Real-Life Case Study

A Study of Failures in Community Clusters: The Case of Conte ................................................................................................. 189

Subrata Mitra, Suhas Javagal, Amiya K. Maji, Todd Gamblin, Adam Moody, Stephen Harrell, and Saurabh Bagchi
Session 6: Testing

An Automated (F) LTL Test Oracle for Testing with Requirements .................................................................197
  Ingo Pill and Franz Wotawa

An Adaptive Sequence Approach for OOS Test Case Prioritization ...............................................................205
  Jinfu Chen, Lili Zhu, Tsong Yueh Chen, Rubing Huang, Dave Towey, Fei-Ching Kuo,
  and Yuchi Guo

Advances in the Characterization of Cognitive Support for Unit Testing: The
Bug-Hunting Game and the Visualization Arsenal .................................................................................................213
  Marllos P. Prado and Auri M. R. Vincenzi

Sixth International Workshop on Software Certification (WoSoCer 2016)

First Invited Talk

Modeling and Formalisms for Certification

Integrated Formal Methods for Constructing Assurance Cases ....................................................................................221
  Carmen Cârlan, Tewodros A. Beyene, and Harald Ruess

On the Exploration of Model-Based Support for DO-178C-Compliant Avionics
Software Development and Certification ...................................................................................................................229
  Andrés Paz and Ghizlane El Boussaidi

Model-Based Software Engineering and Certification: Some Open Issues ..............................................................237
  Stefano Russo and Fabio Scippacercola

Second Invited Talk

Reliability and Safety Assurance

Certification of Medical Information Systems: Towards a Foundational Framework
and Methodology ..................................................................................................................................................241
  Jens H. Weber and Morgan Price

Safety Assurance for Emergent Collaboration of Open Distributed Systems ...........................................................249
  Sebastian Mueller and Peter Liggesmeyer

Considering Testing-Coverage and Fault Removal Efficiency Subject to the Random
Field Environments with Imperfect Debugging in Software Reliability Assessment .................................................257
  Qiuying Li and Chengyong Mao
Formal Verification for Practicing Engineers (FVPE 2016)

Session 1: Methods and Experiences
Insights for Practicing Engineers from a Formal Verification Study of the Linux Kernel
Suresh Kothari, Payas Awadhutkar, and Ahmed Tamrawi

Session 2: Safety and Certification
A Formal Model for Stateful and Variant-Rich Automotive Functions
Michael Käßmeyer, Peter Bazan, Markus Schurius, Rüdiger Berndt, and Reinhard German
