Message from the ISSRE Fast Abstracts 2017 Chairs

On behalf of the Organizing Committee, it is our pleasure to welcome you to the Fast Abstracts track of the 28\textsuperscript{th} International Symposium on Software Reliability Engineering (ISSRE 2017) in Toulouse, France.

The goal of the Fast Abstracts track is to bring together researchers and practitioners working in Software Reliability Engineering (SRE) to discuss current work, ongoing experiences, as well as positions on key topics and open issues.

A fast abstract is a two-page article to introduce early original ideas targeting open problems in both research and industry, discuss new research trends in SRE, state positions on controversial issues, or report on relevant ongoing experiences and open challenges of SRE in industry. We accepted eight Fast Abstracts covering various areas of SRE, such as debugging, reliability, safety, security, and testing, and hope to have stimulating discussions during the conference.

We would like to thank the organizing committee for their collective efforts in organizing the conference and developing this year program. We would also like to thank the community, authors, and the conference attendees for their valued contributions to the Fast Abstract track.
