Message from the WoSoCer 2017 Chairs

On behalf of the Organizing Committee, it is our pleasure to welcome you to the 7th IEEE International Workshop on Software Certification (WoSoCer 2017), co-located with the 28th IEEE International Symposium on Software Reliability Engineering (ISSRE 2017) in Toulouse, France.

The WoSoCer workshop is a forum to discuss novel solutions for the certification of software in critical systems, by involving researchers, senior technical people, domain experts, and regulatory authorities to present new solutions and perspectives in the context of industrial and academic research projects. The workshop welcomes contributions related to any area of critical software systems, and their certification according to safety and security standards and regulations. In addition, this edition of the workshop focuses on a special theme currently of high relevance: the certification of autonomous systems based on ML/AI (Machine Learning and Artificial Intelligence) technology.

We would like to thank the program committee members for their support at shaping the workshop program; the organizers of the ISSRE conference for kindly hosting the WoSoCer workshop; and the research community for their valued contributions to the workshop.

The Organizing Committee
Homa Alemzadeh, University of Virginia, USA
Raul Barbosa, University of Coimbra, Portugal
Francesco Brancati, ResilTech s.r.l., Italy
Barbara Gallina, Mälardalen University, Sweden
Mark Lawford, McMaster University, Canada
Roberto Natella, Federico II University of Naples, Italy
Kate Netkachova, City University of London, UK
Roberto Pietrantuono, Federico II University of Naples, Italy
Nuno Silva, CRITICAL Software S.A., Portugal
