The IEEE Computer Society (IEEE CS) operates Conference Publishing Services (CPS) to publish conference proceedings for more than 250 acclaimed international conferences each year in a variety of formats, including books, CD-ROMs, USB Drives, and online publications. CPS produces comprehensive conference proceedings that include high-quality technical content and are distributed to a global audience of researchers, practitioners, and students in the fields of computer science and engineering.

CPS is an innovative online collaborative conference publishing system designed to speed the delivery of ready-to-publish conference proceedings. The CPS Online workspace gives conferences the opportunity to upload files through any Web browser, check status and scheduling on their project, make changes to the Table of Contents and Front Matter, approve editorial changes and proofs, and communicate with their CPS editor through discussion forums, chat tools, commenting tools, and e-mail.
