2009 International Workshop on Chaos-Fractals Theories and Applications

IWCFTTA 2009

Table of Contents

Welcome Message from the Conference

Chairs .................................................................................................................................................. xii
Organizing and Program Committees ............................................................................................ xiv
Reviewers ........................................................................................................................................... xvi

Chaos Synchronization

Anti-synchronization of the Sprott E System with Parameter ........................................................... 3
  Xiao-jun Liu, San-fu Wang, Li-xin Yang, and Xian-feng Li
Modified Function Projective Synchronization of Two Different Discrete-Time Chaotic Systems ................................................................. 6
  Yin Li
Dynamical Complexity of Planar Piecewise Isometries .................................................................. 11
  Zhan-he Chen, Xin-chu Fu, and Rong-zhong Yu
Finite Time Synchronization of Nonautonomous Multiscroll Chaotic Systems ............................. 16
  Zhifang Gui, Xiaofeng Wu, and Qian Lin
Global Chaos Synchronization of the Brushless DC Motor Systems via Variable Substitution Control ......................................................................................................................... 21
  Zhong Liu, Yun Chen, and Xiaofeng Wu
Synchronization of Two Physical Systems with Fully Unknown Parameters by Adaptive Control ....................................................................................................................... 25
  Yingxiang Chang, Xianfeng Li, Yandong Chu, and Xiuping Han
Anti-synchronization of Systems with Unknown Parameters and Parameters Identification .............................................................................................................. 30
  Mihua Ma and Meili Lin
A New Multistage Chaos Synchronized System for Secure Communications and Noise Perturbation .............................................................................................................................. 35
  Li-Xin Yang and Jian-Gang Zhang
Robust Synchronization of Fractional Lorenz Systems Containing Nonlinear Inputs
Yi-Sung Yang, Meei-Ling Hung, Teh-Lu Liao, and Jun-Juh Yan

Using an Adaptive Sliding Mode Variable Structure Controller with Sector Nonlinear Input to Achieve Chaotic Systems Synchronization
Wei Deng, Jifang Wang, Guangzhao Cui, Zhenjun Wu, and Jie Fang

H∞ Synchronization of Switched Chaotic Systems via Output Feedback Control
Zhang-Lin Wan, Jun-Juh Yan, Yi-You Hou, and Teh-Lu Liao

Adaptive Synchronization between Two Different Chaotic Systems with Uncertainties
Meili Lin, Jianping Cai, and Zhengzhong Yuan

Fractional Order Adaptive Synchronization of a New Hyperchaotic System with an Uncertain Parameter
Longge Zhang

The Hybrid Function Projective Synchronization of Discrete Chaotic Systems
Miao Diao, Yongguang Yu, and Sha Wang

Chaos-Based Control and Optimization
Forward Displacement Analysis of the 5SPS-1CCS Generalized Stewart Parallel Robot Mechanism Based on Hyper-Chaotic Methods
Youxin Luo, WeiYue Xiao, Bin Zeng, and Xiguang Huang

Inverse Displacement Analysis of General 7R Manipulator Based on Hyper-Chaotic Least Square Method
Youxin Luo and Gegang Liao

The Globally Attracting and Repelling for a Class of Planar Piecewise Isometries
Rong-Zhong Yu, Xin-Chu Fu, and Zhan-He Chen

The Generation of a New Hyperchaotic System via State Feedback Control
Yongchao Cao, Yuxia Li, and Xia Huang

Complex Dynamics and Periodic Feedback Control in a Discrete-Time Predator-Prey System
Ning Li, Qingling Zhang, and Haiyi Sun

Analysis of a Predator-Prey System Concerning Impulsive Effect
Lingshu Wang and Guanghui Feng

Forced Oscillations in Wind Energy Generation Systems
Zhen Li, Siu-Chung Wong, and Chi K. Tse

Noise Induced Anticoherence Resonance in a Delayed Circadian Rhythm System
Lin Ji, Xinfang Wei, Qionghua Jin, and Meiling Yu

Application of Chaos Genetic Algorithm to Transformer Optimal Design
Shuang Zhang, Qinghe Hu, Xingwei Wang, and Zhiliang Zhu
Chaos-Genetic Algorithm Based on the Cat Map and Its Application on Seismic Wavelet Estimation ................................................................. 112
Fang Wang, Yongshou Dai, and Shaoshui Wang

An LMI Approach to Robust Exponential Stabilizing Controller Design for a Class of Structured Uncertain Unified Chaotic Systems ................................................ 117
Yi-Pin Kuo, Her-Terng Yau, Shyi-Kae Yang, and Kao-Shing Hwang

Adaptive Fuzzy Sliding Mode Controller Design for Lorenz System ........................................................ 122
Chao-Lin Kuo, Neng-Sheng Pai, and Her-Terng Yau

Time-Varying Stochastic Turbulence Model Considering Intermittency ........................................... 126
Guoyong Yuan, Lin Xu, Yaping Liu, and Shiping Yang

Flocking in Multi-agent Systems with a Bounded Control Input .................................................... 130
Bo Liu and Hai Yu

Flocking of Multiple Dynamic Agents ......................................................................................... 135
Bo Liu, Jiancheng Zou, and Jianwen Wang

Chaos-Based Cryptography and Secure Communication
The Cipher Code Parameter Selection and Its Impact on Output Cycles ........................................ 143
Qun Ding, Jing Pan, Lu Wang, and Guanrong Chen

Design and Implementation of Image Chaotic Communication via FPGA
Embedded Ethernet Transmission ................................................................................................. 148
Yuling Luo, Simin Yu, and Junxiu Liu

Image Encryption Algorithm Based on Hyperchaotic System ...................................................... 153
Lin Jinqiu and Si Xica

Adaptive Noise Reduction Method for Chaotic Signals Using Dual-Lifting Wavelet Transform ................................................................. 157
Yunxia Liu and Xiaowei Liao

Enhancement of a Chaotic Carrier Bandwidth in a Multi-quantum-well Laser Transmitter Using Self-Phase Modulation in an Optical Fiber Feedback Path ........................................... 162
Yan Senlin

Secure Communication via Finite-Time Synchronization between Two Different Chaotic Systems with Uncertainties ................................................................. 167
Jianping Cai, Meili Lin, and Zhengzhong Yuan

A Feasible Chaotic Encryption Scheme for Image ........................................................................ 172
Dongming Chen

Secure Communication Scheme Using Uncertain Delayed Chaotic System Synchronization Based on Disturbance Observers ................................................................. 177
Rong Mei

A New Structure of Chaotic Secure Communication in Wireless AWGN Channel ................................................................. 182
Hang-Hong Kuo, Teh-Lu Liao, Jui-Sheng Lin, and Jun-Juh Yan

Image Hiding Algorithm Based on Displacement Block on Odd-Even Layer ........................................... 186
Ren Honge, Chang Chunwu, and Zhang Jian
Design of Wireless Sensor Network Node with Hyperchaos Encryption Based on FPGA .................................................................190
  Ji-gang Tong, Zhen-xin Zhang, Qing-lin Sun, and Zeng-qiang Chen

An Image Encryption Scheme Based on Chaotic Maps .........................................................195
  Wei Zhang, Zhi-liang Zhu, and Hai Yu

An Efficient Encryption Algorithm Based on Image Reconstruction .....................................200
  Hai Yu, Zhiliang Zhu, and Guanrong Chen

The Design and Implementation of Password Authentication System Based on Chaos ..........205
  Nan Jiang, Ri-jing Yang, and Xiang-dong Liu

Chaotic Dynamics

Topological Conjugacy Classification of Cellular Automata ....................................................211
  Junbiao Guan and Shaowei Shen

Topological Chaos of Cellular Automata Rules .................................................................216
  Weifeng Jin, Fangyue Chen, and Chunlan Yang

Gliders, Collisions and Chaos of Cellular Automata Rule 62 ..............................................221
  Lun Shi, Fangyue Chen, and Weifeng Jin

Complex Dynamics of 4D Hopfield-Type Neural Network with Two Parameters ..............226
  Zengqiang Chen and Pengfei Chen

A New Hyper-Chaotic Lü Attractor and Its Local Bifurcation Analysis ...............................231
  Hongyan Jia, Zengqiang Chen, and Wenjuan Wu

Complex Symbolic Dynamics of One Class of Cellular Automata Rules ..............................236
  Changbing Tang, Fangyue Chen, and Weifeng Jin

Estimating the Globally Attractive Set and Positively Invariant Set of a New Lorenz-Like Chaotic System and Its Applications .................................................241
  Jigui Jian, Zhengwen Tu, and Hui Yu

Dynamics of a Simplified Unified System ............................................................................246
  Kehui Sun, Xia Wang, and Shuisheng Qiu

An Algebraic Criterion of Hopf Bifurcation with Relatively Reliability ................................250
  Jianjun Tu and Hanlin He

Topologically Mixing and Chaos of One Class of Bernoulli-Shift Cellular Automata Rules ...............................................................255
  Mingyao Wang, Fangyue Chen, Weifeng Jin, and Lin Chen

A New Hyper-Chaos Generated from Chen's System via an External Periodic Perturbation ..........................................................260
  Zhi-liang Zhu, Qi Zhang, Hai Yu, and Jian Gao

A New Three-Dimensional Autonomous Chaotic System with a Pair of Diagonal Double-Wing Attractor and Its Circuit Realization .........................................................267
  Enzeng Dong, Liang Feng, Zaiping Chen, and Zengqiang Chen

Stability and Hopf Bifurcations of a Three-Species Symbiosis Model with Delays .................272
  Qin Gao
A New Proof for the Existence of Topological Horseshoe in Chen’s Attractor ........................................277
   Wenjuan Wu, Zengqiang Chen, and Guanrong Chen
A Method to Determine the Parameters of Phase Space Reconstruction Based
on the Neural Network ..........................................................................................................................281
   Runjie Liu, Zhan Hou, and Jinyuan Shen
Converting a General 2D Quadratic Autonomous System to a 2D Lorenz-Type
System ................................................................................................................................................286
   Cuncai Hua and Guanrong Chen
Chaos and Its Synchronization in a Fractional Order Neutral Differential
System ..............................................................................................................................................290
   Xiaoran Lin, Shangbo Zhou, Xiaofeng Liao, and Xiubang Tang

Complex System
Dynamics of the HBV Model with Diffusion and Time Delay ..............................................................297
   Meihong Qiao and Huan Qi
Analysis of Self-Similar Traffic Based on the On/Off Model .................................................................301
   Fang Ju, Jie Yang, and Heng Liu
Halting Infectious Disease Spread in Social Network ..............................................................................305
   Zhen-peng Li and Guo-liang Shao
Detecting Dynamics in Cricetulus Barabensis Populations .....................................................................309
   Xiaoxia Rong and Yuzhi Wang
Coordinating Multiple Retailers Supply Chains When Demand and Cost Are Disrupted ..................313
   Qun Jiang
Chaotic Oscillator Detection Based on Empirical Mode Decomposition and Its Application ..................318
   Fengli Wang and Deyou Zhao
Horseshoe Chaos in a Three Species Food Chain Model .........................................................................323
   Qingju Fan
Bifurcation and Chaos Analysis of a Relative Short Spherical Air Bearing System via a Novel Hybrid Method .........................................................................................................................327
   Cheng-Chi Wang, Her-Terng Yau, and Chao-Lin Kuo
Modeling Router-Level Internet Topology ..............................................................................................331
   Cheng Zhang, Yanheng Liu, Jian Wang, and Minhui Xia
The Bifurcation and Chaos Analysis of Chinese Net Export under the Global Financial Crisis ............336
   Huanmei Qin and Songcheng Sheng
Dynamical Properties of Some Coupled Map Networks with Applications to Multi-layer Center Networks ................................................................................................................................................341
   Shujuan Guo and Xinchu Fu
Dynamic Behavior of a Three-Species Ecological System with the Beddington-DeAngelis Functional Response ..........................................................................................................................346
   Hengguo Yu and Min Zhao
A Coupled Model of Natural Resource and Environmental Pollution for Catastrophe Studies ..........................................................351
Liujun Chen and Shuang Wu

Using ESDA to Detect Overlapping Multi-communities ..........................................356
Weihua Su and Li Wang

On the Chaotic Dynamics Analysis of Internet Traffic ...........................................361
Liangbin Cai, Hui Li, Bo Chen, and Jian Wang

Effect of Fishing on the Complex Dynamics of Marine Ecosystems ..............................365
Jianfeng Feng and Hongli Wang

Self-Organization of Swarms with Communication Delays under Disturbances ................370
Bo Liu, Zhimin Zhao, Jie Zhang, and Yulian Fan

Fractals Theory and Application

Researches on a Fractal Watermarking Algorithm Based on Luminance Shifting Factor ........................................................................................................377
Aiping Jiang and Yulan Han

Hausdorff Dimension Spectrum of Self-Affine Carpets Indexed by Nonlinear Fibre-Coding ..................................................................................................................382
Yongxin Gui

General Julia Sets of Non-analytic Families $z^n+c$ .......................................................387
Xiangdong Liu, Zhijie Li, Nan Jiang, and Junxing Zhang

Design and Application of Fractal Pattern Art in the Fashion Design ..........................391
Xiaotian Long, Wen Li, and Weiyan Luo

General Mandelbrot Sets and Julia Sets Generated from Non-analytic Complex Iteration $F_m(z)=z^n+c$ ........................................................................................................395
Dejun Yan, Junxing Zhang, Nan Jiang, and Lidong Wang

Estimation of Undiscovered Hydrocarbon Resources Potential through Fractal Geometry Based on GIS .................................................................................................................399
Bo Li, Tingshan Zhang, Liye Bai, and Xiaoguang Miao

Study on Fault Analysis of Rotor Machinery Using Lyapunov Exponent-Fractal Dimension .........................................................................................................................404
Bingcheng Wang, Zhaohui Ren, and Rongtao Hou

Fractal Research on Relation between Coalfield Geological Tectonic and Gas Outburst ...............................................................................................................................408
Jun He, Mingju Liu, and Xinsheng Chen

Typical Power Quality Disturbance Identification Based on Fractal Box Dimension .................................................................................................................................412
Genghuang Yang, Yuliang Liu, Li Zhao, and Shigang Cui

General Quaternion M Sets with Noise Perturbations ..................................................417
Yuan-yuan Sun and Xing-yuan Wang

An Analysis of the Double-Module Fractal Structure of Enterprises and Its Forming Motivations and Mechanism .........................................................................................422
Huaibin Li and Xiang Li
Study on the Crack Surface of Fiber Reinforced Concrete in SHPB Experiment ........................................426
    Guoping Jiang, Chujie Jiao, and Da Ren
Image Compression Algorithm Based on Fractal-Wavelet ..............................................................430
    Wen-hui Guo
Fractal Study on Plant Classification and Identification .................................................................434
    Wei Jiang, Cui-cui Ji, and Hua Zhu
A DCT-Based Fractal Image Compression Method .......................................................................439
    Chong Fu and Zhi-liang Zhu

Author Index .......................................................................................................................................445
