**Plenary Talk**

Formal Verification of Infinite State Systems Using Boolean Methods ................................................................. 3
  *Randal E. Bryant*

**Session 1: Complexity and Decidability**

Two-Variable Logic on Words with Data ......................................................................................................................... 7
  *Mikołaj Bojańczyk, Anca Muscholl, Thomas Schwentick, Luc Segoufin, and Claire David*

LTL with the Freeze Quantifier and Register Automata ................................................................................................. 17
  *Stéphane Demri and Ranko Lazić*

Fixed-Parameter Hierarchies inside PSPACE .................................................................................................................. 27
  *Guoqiang Pan and Moshe Y. Vardi*

The Boundedness Problem for Monadic Universal First-Order Logic ................................................................................ 37
  *Martin Otto*

**Session 2: Concurrency**

A Congruence Rule Format for Name-Passing Process Calculi from Mathematical Structural Operational Semantics .................................................................................................................. 49
  *Marcelo Fiore and Sam Staton*

On the Expressiveness of Linearity vs Persistence in the Asynchronous Pi-Calculus .................................................... 59
  *Catuscia Palamidessi, Vijay Saraswat, Frank D. Valencia, and Björn Victor*
Saturated Semantics for Reactive Systems

Filippo Bonchi, Barbara Kö nig, and Ugo Montanari

Session 3: Pushdown Systems

On Model-Checking Trees Generated by Higher-Order Recursion Schemes

C.-H. L. Ong

Monadic Chain Logic over Iterations and Applications to Pushdown Systems

Dietrich Kuske and Markus Lohrey

An Automata-Theoretic Approach for Model Checking Threads for LTL Properties

Vineet Kahlon and Aarti Gupta

On Typability for Rank-2 Intersection Types with Polymorphic Recursion

Tachio Terauchi and Alex Aiken

Invited Talk

Adapting Logics

Andreas Blass

Session 4: Logics of Programs

Managing Digital Rights using Linear Logic

Adam Barth and John C. Mitchell

Variables as Resource in Hoare Logics

Matthew Parkinson, Richard Bornat, and Cristiano Calcagno

Independence and Concurrent Separation Logic

Jonathan Hayman and Glynn Winskel

Matching Explicit and Modal Reasoning about Programs: A Proof Theoretic Delineation of Dynamic Logic

Daniel Leivant

Session 5: Proof Theory

Context Semantics, Linear Logic and Computational Complexity

Ugo Dal Lago

Obsessional Cliques: A Semantic Characterization of Bounded Time Complexity

Olivier Laurent and Lorenzo Tortora de Falco

A Conditional Lower Bound for a System of Constant-Depth Proofs with Modular Connectives

Alexis Maciel and Toniann Pitassi

Session 6: Model Theory

A Characterisation of First-Order Constraint Satisfaction Problems

Benoït Larose, Cynthia Loten, and Claude Tardif

First Order Formulas with Modular Predicates

Laura Chaubard, Jean-Éric Pin, and Howard Straubing
Session 9: Timed and Stochastic Systems

Stochastic Games with Branching-Time Winning Objectives ..................................................... 349
  Tomáš Brazdil, Václav Brožek, Vojtěch Forejt, and Antonín Kučera
Coinductive Proof Principles for Stochastic Processes ................................................................. 359
  Dexter Kozen
Control in o-minimal Hybrid Systems ....................................................................................... 367
  Patricia Bouyer, Thomas Brihaye, and Fabrice Chevalier

Session 10: Verification

An Abstraction-Refinement Framework for Multi-Agent Systems ............................................ 379
  Thomas Ball and Orna Kupferman
Temporal Logics and Model Checking for Fairly Correct Systems ........................................ 389
  Daniele Varacca and Hagen Völzer
3-Valued Abstraction: More Precision at Less Cost ................................................................. 399
  Sharon Shoham and Orna Grumberg

Session 11: Approximations

Approximation Schemes for First-Order Definable Optimization Problems ............................. 411
  Anuj Dawar, Martin Grohe, Stephan Kreutzer, and Nicole Schweikardt
Approximate Satisfiability and Equivalence .............................................................................. 421
  Eldar Fischer, Frédéric Magniez, and Michel de Rougemont

List of Short Presentations

A Polynomial-time Algorithm for Uniqueness of Normal Forms of Linear Shallow Term Rewrite Systems
  Julian Zinn and Rakesh Verma
Non-Closure Results for First-Order Spectra
  Aaron Hunter
A Dolev-Yao-based Definition of Abuse-free Protocols
  Detlef Kaehler, Ralf Kuesters, and Thomas Wilke
An Abstract Completion Procedure for Cut Elimination in Deduction Modulo
  Guillaume Burel and Claude Kirchner
Interactive Correctness Criterion for Multiplicative-Additive Proof-Nets
  Roberto Maieli and Paul Ruet
A Logical Look at Agents: Problem-Solving on the Semantic Web
  Leona F. Fass
Nominalization in Intensional Type Theory
  Jorgen Villadsen
Grounding for Model Expansion in k-Guarded Formulas
  Murray Patterson, Yongmei Liu, Eugenia Ternovska, and Arvind Gupta

Author Index ............................................................................................................................... 431
