# Table of Contents

2011 International Conference on Microelectronic Systems Education—MSE’11

Scroll to the title and select a Blue link to open a paper. After viewing the paper, use the bookmarks to the left to return to the beginning of the Table of Contents.

## Session 1: Sensor Networks and Education

**Teaching for Evolution Towards Embedded Multi-Sensor Interfaces** ................................................................. 1  
Zeljko Zilic and Boris Karajica

**Bluetooth Wireless Handset for People with Severe Motor Disabilities: Capstone Design Project for Rehabilitation Technology** ................................................................. 5  
Younghyun Kim, Jooyeon Lee, Youngshin Koh and Naehyuck Chang

**Industrial Inspired Just-in-Time (JIT) Teaching** ................................................................................................. 9  
Alex K. Jones and Steven P. Levitan

## Session 2: Innovative Design Projects

**Teaching Graphics Processing and Architecture Using a Hardware Prototyping Approach** ....................... 13  
Michael Steffen, Phillip Jones and Joseph Zambreno

**Advanced Logic Design Through Hands-on Digital Music Synthesis** ............................................................. 17  
Walter Condley, Andrew W. Hill and Matthew R. Guthaus

**Puzzle Solver Accelerators Make Excellent Capstone Design Projects** ............................................................ 21  
Soheil Ghiasi, Matin Hashemi, Volodymyr Khibin, and Faisal Khan

## Session 3: Posters

Poster Chair: Matt Guthaus, University of California at Santa Cruz

Jong Hoon Ahnn and Miodrag Potkonjak

**Teaching Low Voltage Electronics: The Case of the Rectifier Circuit** .......................................................... 29  
Adilson Jair Cardoso, Márcio Cherem Schneider and Carlos Galup-Montoro

**A Bottom-up Approach to Digital Design with FPGA** ..................................................................................... 31  
Giuliano Donzellini and Domenico Ponta

**A Hole in One: A Project-based Class on Mechatronics** ................................................................................. 35  
Gabriel Hugh Elkaim

**Introducing Hardware Emulation in the ECE Curriculum** .............................................................................. 39  
Mark G. Faust, Haera Chung, Hoon Park and Joe Rodriguez

**Versatile March Test Generator for Hands-on Memory Testing Laboratory** .................................................. 41  
J.-M. Galliere and L. Dilillo
An Undergraduate Embedded Systems Project .......................... 43
John F. Greco and John A. Nestor

FPAA Chips and Tools as the Center of a Design-based Analog Systems Education .......................... 47
Paul Hasler, Craig Scholttmann and Scott Koziol

Teaching Three-Dimensional System-in-Package Design Automation in a Semester Course .......... 52
Shih-Hsu Huang, Wen-Pin Tu, Hua-Hsin Yeh and Chun-Hua Cheng

Creating a Mixed-Signal Test and Product Engineering Course ................................................. 56
Tina A. Hudson, Bryan Copeland and Deidrick Solomon

Learning Nanotechnology Through Crossbar-based Architecture and Carbon Nanotube (CNT) FETs .......... 60
Inseok Jung, Elizabeth R. Kim and Minsu Choi

Novel Knowledge Module on Fusion of Logic and Memory to Undergraduate Students .................. 64
D. K. Karunaratne, Srinath Rajaram, Kristin Kusmierek, Paromita De and Sanjukta Bhanja

The Effects of Time-Compressed Speech with Visual Supporting Materials and Learner Pace Control on Learning Achievement ................................................................. 68
Eun-ok Kim and Jang-hyun Park

From RTL to GDSII: An ASIC Design Course Development using Synopsys® University Program ........ 72
Jianchao Lu and Baris Taskin

Music Synthesizer for Digital Logic Design Course .............................................................................. 76
Julius Marpaung, Louis Johnson, Sohum Sohoni and Sunilkumar Lakkakula

Logic Design as an Entry Point for Non-engineers: Increasing Diversity in Microelectronics Education and Research ................................................................. 80
Ani Nahapetian

Instructional Design with Practical Problems Using Co-Simulation ................................................... 84
Prawat Nagvajara, Kevin Cunningham and Swetha George

HDL Coding Guidelines for Student Projects .................................................................................. 86
John A. Nestor

Introducing MicroBlaze as an Infrastructure for Performance Modeling ........................................ 90
Fadi Obeidat and Robert Klenke

VEasy: a Tool Suite for Teaching VLSI Functional Verification ......................................................... 94
Samuel Nascimento Pagliarini and Fernanda Lima Kastensmidt

Introducing an Industry Oriented Graduate Course: Testing of Digital Systems ................................. 98
Mihaela Radu

Experience in Increase of Practical Hours for HDL Course ............................................................... 102
Uljana Reinsalu and Peeter Ellervee

An Ontology-Based Intelligent Learning Object for Teaching the Basics of Digital Logic ..................... 106
Tarmo Robal, Taavi Kann and Ahto Kalja

ZONA – An Adaptable NoC-based Multiprocessor Addressed to Education on System-on-Chip Design .... 108
Ivan Saraiva Silva, Silvio R. Fernandes and Leonardo A. Casillo

SystemVerilog Assertion for Microarchitecture Education Considering Situated Nature of Learning: A Senior Project .......................................................... 112
Ryuichi Takahashi and Yoshiyasu Takefuji
Using FPGA-based Configurable Processors in Teaching Hardware/Software Co-Design of Embedded Multiprocessor Systems ................................................................. 114
  Xiaofang Wang

Application-Oriented Teaching of Embedded Systems .......................................................................................................................... 118
  Kai-Chao Yang, Yu-Tsang Chang, Chien-Ming Wu, Chun-Ming Huang and Hua-Hsin Luo

Session 4: Teaching Methods and Educational Research

Interactive Application for Learning RTL Code Structures .................................................................................................................. 122
  Mark C. Johnson
