2011 Seventh International Conference on Mobile Ad-hoc and Sensor Networks
MSN 2011
Table of Contents

Preface.........................................................................................................................................................xii
Organization Committee...........................................................................................................................xiv
Technical Program Committee.................................................................................................................xv
Reviewers.................................................................................................................................................xviii
Keynote Abstracts.....................................................................................................................................xix

Wireless Sensor Networks
Nonparametric Copula Density Estimation in Sensor Networks .................................................................1
    Leming Qu, Hao Chen, and Yichen Tu
A Constant-Approximation for Maximum Weight Independent Set of Links under the SINR Model .................................................................................................................................9
    Lixin Wang, C.P. Abubucker, Williams F. Lawless, and Anthony J. Baker
An Incomplete Coverage Control Based on Target Tracking Wireless Sensor Network ..................................................15
    Meng Jin, Zhipeng Gao, Rimao Huang, Xiao Chang, and Feng Qi
Localized Topologies with Bounded Node Degree for Three Dimensional Wireless Sensor Networks .................................................................................................................................20
    Fan Li, Zeming Chen, and Yu Wang
An Environment Monitoring System for Precise Agriculture Based on Wireless Sensor Networks .................................................................................................................................28
    Jianfa Xia, Zhenzhou Tang, Xiaoqiu Shi, Lei Fan, and Huaizhong Li
Applying Modified Cramér-Rao Bound to Random Sensor Deployment .........................................................36
    Sara Pino-Povedano and Francisco-Javier González-Serrano
Energy-Efficient Data Gathering in High-Voltage Transmission Line Monitoring System ..................................................45
    Zenghua Zhao, Yanchao Mao, Gaotao Shi, Zhibin Dou, and Yantai Shu
   Xiaokang Liu, Lei Wang, Zhuxiu Yuan, Yuanfang Chen, Lei Shu, and Chunsheng Zhu

Load Migrating for the Hot Spots in Wireless Sensor Networks Using CTP ............................................167  
   Jing Zhao, Lei Wang, Wenlong Yue, Zhengquan Qin, and Ming Zhu

History-Aware Adaptive Backoff for Neighbor Discovery in Wireless Networks .......................................174  
   Zimu Yuan, You Lizhao, Wei Li, Biao Chen, and Zhiwei Xu

Collaborative Topology Control for Lifetime Maximization ........................................................................182  
   Lei Shi, Wen-Zhan Song, Mingsen Xu, Alex Zelikovsky, and Li Yu

**Wireless LAN**

Performance Investigation on an MIMO-capable 802.11a Compliant MAC Protocol Implementation ..........................................................190  
   Emilija Miletic, Klaus Tittelbach-Helmrich, and Goran Panic

Modeling FPGA-based IEEE 802.11 DCF ..............................................................................................194  
   Shan Wang, Haitao Zhao, Shengchun Huang, and Abdelhakim Hafid

**Wireless Mesh and Ad Hoc Networks**

A Simple Channel Assignment for Opportunistic Routing in Multi-radio Multi-channel Wireless Mesh Networks ..........................................................201  
   He Shiming, Zhang Dafang, Xie Kun, Qiao Hong, and Zhang Ji

Performance of a Multi-channel MAC Protocol Implemented in Multi-robot System ..........................................................209  
   Feng Zhang, Alei Liang, and Haibing Guan

On the Spectral Characteristics of Ad Hoc Networks and their Mobility Properties ..........................................................215  
   Alonso Silva and Gabriel H. Tucci

A Game Theoretic Approach to Increase Performance in Multihop Wireless Mesh Networks ..........................................................223  
   Jonathan Backens and Min Song

CRDMAC: An Effective Circular RTR Directional MAC Protocol for Wireless Ad Hoc Networks ..........................................................231  
   Huang Lu, Jie Li, Zhongping Dong, and Yusheng Ji

Minimum Cost Broadcast in Multi-radio Multi-channel Wireless Mesh Networks ..........................................................238  
   Jun Wang, Min Song, George Hsieh, and Chunsheng Xin

An Efficient Unstructured P2P Overlay over MANET Using Underlying Proactive Routing ..........................................................248  
   Nadir Shah and Depei Qian
A New Mechanism to Incorporate Network Coding Into TCP in Multi-radio Multi-channel Wireless Mesh Networks .................................................................256

Hongquan Liu, Jiong Chen, and Yuantao Gu

Social and Delay Tolerant Networks

An Improved Content-Based Data Dissemination In Human Contact-Based Network ..................................................................................................................261

Chao Jiang, Tao Peng, Alei Liang, and Haibing Gu

Social Relationship Enhanced Predicable Routing in Opportunistic Network ..........................................................................................................................268

Xingguang Xie, Yong Zhang, Chao Dai, and Mei Song

Evolving Model of Opportunistic Routing in Delay Tolerant Networks ...............................................................................................................................276

Xiaofeng Lu, Pan Hui, and Pietro Lio

On Exploiting Few Strangers for Data Forwarding in Delay Tolerant Networks ................................................................................................................282

Peiyan Yuan, Huadong Ma, and Pengrui Duan

Power-Aware Traffic Engineering with Named Data Networking .................................................................................................................................289

Yunlong Song, Min Liu, and Yuwei Wang

Maximizing Saturation Throughput of Control Channel in Vehicular Networks ............................................................................................................297

Shan Wang, An Song, Jibo Wei, and Abdelhakim Hafid

A Study on Relationship Migration among Social Networking Providers .....................................................................................................................303

Suran Li, Lei Wang, Zhenquan Qin, Zhu Ming, and Lei Shu

Buffer and Switch: An Efficient Road-to-Road Routing Scheme for VANETs ............................................................................................................310

Chao Song, Ming Liu, Yonggang Wen, Jiannong Cao, and Guihai Chen

Cognitive Wireless Networks

A Dynamic Spectrum Access Strategy Based on Real-Time Usability in Cognitive Radio Sensor Networks ........................................................................318

Zemin Hu, Yongmei Sun, and Yuefeng Ji

A Stable Joint Routing and Spectrum Scheduling Scheme for Cognitive Radio Ad Hoc Networks ..................................................................................323

Henan Zhao, Liusheng Huang, Yindong Zhang, and Hongli Xu

An Adaptive Modulation Selection Scheme Based on Error Estimating Coding ........................................................................................................330

Qing Li, Bin Li, Yu Liu, and Lin Zhang

Posters and Demos

A Data Correlation-Based Virtual Clustering Algorithm for Wireless Sensor Network ..................................................................................................335

Shuchun Yang, Zhipeng Gao, Rimao Huang, and Xuesong Qiu
Research and Implementation of an Ontology-Based Semantic Reporting System ..........................................................337

Huang Liting, Zhang Yang, and Chen Junliang

A Graph Configuration Method Based on UI Service Composition ..........................................................339

Youyu Chen, Yang Zhang, and Junliang Chen

An Experimental Study of BATMAN Performance in a Campus Deployment of Wireless Mesh Networks ..........................................................341

Jiaqi Xu, Lei Wang, Yongnan Li, Zhenquan Qin, and Ming Zhu

A Geographic Routing Algorithm in Duty-Cycled Sensor Networks with Mobile Sinks ..........................................................343

Can Ma, Lei Wang, Jiaqi Xu, Zhenquan Qin, Ming Zhu, and Lei Shu

A Fast Handoff Mechanism with Pre-scanning for Wireless Mesh Networks ..........................................................345

Chao Pang, Lei Wang, Jiaqi Xu, Zhenquan Qin, and Ming Zhu

Performance Analysis and Improvement of SOFT MAC Scheme in 802.11p Based Vehicular Ad Hoc Networks ..........................................................347

Chang Hu, Yuting Sun, Jinjie Guo, and Jiacheng Chen

The Design of Simulation Platform for Ad Hoc Based Cyber-Physical System ..........................................................350

Li Xiaobo and Zhang Xu

A Fault Detection Algorithm Based on Cluster Analysis in Wireless Sensor Networks ..........................................................354

Xiaodong Zhao, Zhipeng Gao, Rimao Huang, Zhuoqi Wang, and Teng Wang

Cluster-to-Cluster Overlay Network for Video Systems over Wireless Ad Hoc Networks ..........................................................356

Haiyang Zhang

Environmental Data-Based Location Recognition for Living Space ..........................................................358

Sangseung Kang and Jaehong Kim

Comparative Analysis of Classical Routing Protocol LEACH and Its Updated Variants that Improved Network Life Time by Addressing Shortcomings in Wireless Sensor Network ..........................................................361

Muhammad Haneef and Zhongliang Deng

Integrating Wireless Sensor Networks with Cloud Computing ..........................................................364

Khandakar Ahmed and Mark Gregory

A Location and Emergency Monitoring System for Elder Care Using ZigBee ..........................................................367

Cheonshu Park and Jaehong Kim

VISOR: A Pratical VoIP Steganography Platform ..........................................................370

Ziling Wei, Liyang Xu, Bo Liu, Eci Xu, Baokang Zhao, and Jinshu Su

A Simulator for Flexible Sensor Nodes in Wireless Networks ..........................................................373

Jingyao Zhang, Srikrishna Iyer, Patrick Schaumont, and Yaling Yang
Third International Workshop on Performance Evaluation of Wireless Networks (PEWiN 2011)

Analytic Properties of the Binary Tree Based Multiple Access Protocol with Application to RFID Tag Collision Resolution .................................................................376
  Xinqing Yan and Yan Xu

Synchronization between Wireless UPnP Video and Audio Players .......................................................383
  Huai-Jen Liu and Yu-Shiang Huang

SHORT: A Simple HOLE-Resistant Technique for Reliable Geocasting in Location-Free Wireless Sensor Networks ........................................................................388
  Sheng-Shih Wang, Hui-Mei Yang, and Pei-Chun Huang

Calibrating Time of Flight in Two Way Ranging ..............................................................................393
  Asif Iqbal Baba

High-Accuracy Indoor Personnel Tracking System with a ZigBee Wireless Sensor Network .................................................................398
  Chien-Hao Chu, Chun-Hsin Wang, Chiu-Kuo Liang, Wen Ouyang, Jhiih-Hong Cai, and Yi-Hao Chen

High-Performance Temporal Object-Tracking Algorithm Using Virtual Targets in Wireless Sensor Networks ..................................................................................403
  Wen Ouyang and Yi-Hao Chen

Target Coverage in Wireless Sensor Networks ..................................................................................408
  Chang Wu Yu, Kun-Ming Yu, Wei-Ting So, Chin-Tsai Lin, and Chen Yi Lin

Optimum Partition for Distant Charging in Wireless Sensor Networks ..................................................413
  Wen Ouyang, Chang Wu Yu, Chiming Huang, and Tung Hsien Peng

First International Workshop on Optimization for Green Wireless Communication Networks (GREEN 2011)

QoE-aware Power Allocation Algorithm in Multiuser OFDM Systems ..................................................418
  Lili Xie, Chunjing Hu, Wenjun Wu, and Zhenning Shi

Optimal Sequential Detection with Stochastic Energy Constraint .........................................................423
  Jun Geng and Lifeng Lai

International Workshop on Core Network Architecture and Protocols for Mobile Internet (ICNA 2011)

An Overview of Bootkit Attacking Approaches ..................................................................................428
  Xiang Li, Yan Wen, Min Huan Huang, and Qiang Liu

One Leader at One Time: OLOT Routing in Delay Tolerant Networks ..................................................432
  Bing Bai, Zhenqian Feng, Baokang Zhao, and Jinshu Su
Towards a Flaw Function Heuristic Vulnerability Static Analysis Framework for Executable File .............................................................................................................................................................................436
Qiang Liu, Hua Chen, Yan Wen, and Xiang Li

Shrew Attack in Cloud Data Center Networks .............................................................................................................................................................................................................................................................................441
Zhenqian Feng, Bing Bai, Baokang Zhao, and Jinshu Su

Protecting Router Forwarding Table in Space .............................................................................................................................................................................................................................................................................446
Xiangyu Su, Jinzhen Bao, Baokang Zhao, and Jinshu Su

**First International Workshop on Security & Optimization for Wireless Networks (SOWN 2011)**

Identity-Based Strong Key-Insulated Ring Signature Scheme in the Standard Model ......................................................................................................................................................................................................................451
Huaquin Wang and Yuqing Zhang

Structuring Incident Types to Streamline Incident Response .............................................................................................................................................................................................................................................................................456
Predrag Zivic

Improvement on Secrecy Capacity of Wireless LAN Using Matched Filter .............................................................................................................................................................................................................................................................................463
Ryuzou Nishi, Kirill Morozov, Yoshiaki Hori, and Kouichi Sakurai

Minimum-Energy Multicast Using Random Linear Network Coding .............................................................................................................................................................................................................................................................................470
Ying Cai and Lina Zhang

A Fault Tolerant Protocol for Wireless Sensor Networks .............................................................................................................................................................................................................................................................................475
Mohammad Mehdi Afsar, Mohammad Hossein Yaghmaee M., and Esmaeil Zeinali Kh.

Author Index ..................................................................................................................................................................................................................................................................................................................................................................................479
