Message from the Technical Program Chair

Being the program chair for an international event as this was a challenging task but it has proved to be an enriching experience. Many thanks to all members of the program committee for their effort and support in helping to review and to select the papers. I am also grateful to Rochit Rajsuman for his advice and support.

The program committee received 23 papers and, of these, accepted 17. All papers received at least three reviews. The reviewers were asked to rate the papers, and papers were accepted based on an averaged rating. In addition, the program includes three review papers by experts in their fields. This is in the hope that the topics covered will help to attract more local and regional participation and to develop interest in memory technology, design and testing.

I congratulate all authors whose papers were accepted. I hope they will have a fruitful time interacting with each other and with the other participants. Thanks to Penny Storms of IEEE Computer Society Press for managing the production of the workshop records and for her patience.

Finally, I hope that all participants will have a fruitful and enjoyable time at the workshop, and, for the overseas participants, maybe find some time to take in the sights of Singapore.

Lee-Yee Lau
Technical Program Chair
