Message from General Conference Chairs.............................................................................................xiii  
Conference Organization..................................................................................................................................xiv  
Program Committee...................................................................................................................................xv  
Keynotes....................................................................................................................................................xix  

## Session A1

A Novel Channel Model for 3-D HAP-MIMO Communication Systems ..................................................1  
Zhuxian Lian, Lingge Jiang, Chen He, and Qi Xi  

Enabling Proximity Call Continuity via Common Neighbor Tunneling for Public Safety in LTE ..........................................................7  
Sok-Ian Sou, Yi-Ting Peng, Meng-Hsun Tsai, and Yinman Lee  

A Time and Frequency Division Algorithm for Control Signaling Collision Avoidance in Standalone LTE-unlicensed Networks ........................................................................................................12  
Jiying Xu, Yongmei Sun, Yuefeng Ji, and Yang Tian  

Atomic Red-Black Distributed Gauss-Seidel Routing Algorithm for Wireless Sensor Networks ........................................................................17  
Ren-Song Ko  

Minimizing Packet Delay via Load Balancing in Clos Switching Networks for Datacenters ........................................................................23  
Shu Yang, Shanshan Xin, Zhipeng Zhao, and Bin Wu  

Delivery Probability of 3D MANETs with Packet Replication ..................................................................29  
Wu Wang, Bin Yang, Osamu Takahashi, Xiaohong Jiang, and Shikai Shen  

Measurement and Modeling of 3D Spatial Wireless Backhaul Channels in NLOS Scenarios ........................................................................35  
Ruonan Zhang, Kun Wang, Kaijun Ren, Zhimeng Zhong, Xiaomei Zhang, and Xiaoyan Pang
A Distributed Prioritized Multiple Access Scheme for Ad Hoc Networks Using
Time-Frequency Hopping Communications ................................................................. 41
Ruonan Zhang, Miao Li, Lin Cai, and Bin Li

Multicast Delivery Probability of MANETs with Limited Packet Redundancy .................. 48
Bin Yang, Yulong Shen, Guilin Chen, and Yuanyuan Fan

Session A2

The Dynamic Linear Combination Retransmission Based on Network Coding
in Multicast Network ..................................................................................................... 53
Bin Li, Quan Li, Ruonan Zhang, Yi Jiang, and Siying Bi

Delay-Intolerant Uplink Traffic Aware Timer-Based Power Management
for Infrastructure IEEE 802.11 WLANs with Unreliable Wireless Links ...................... 58
Shenji Luan, Yi-hua Zhu, and Kaikai Chi

Link Selection for Secure Two-Hop Transmissions in Buffer-Aided Relay
Wireless Networks ...................................................................................................... 64
Ji He, Yuanyu Zhang, Yulong Shen, and Xiaohong Jiang

An Improved Amorphous Localization Algorithm for Wireless Sensor Networks ................ 69
Shikai Shen, Bin Yang, Kaiguo Qian, Wu Wang, Xiaohong Jiang, Yumei She,
and Yujian Wang

Achieving Full-View Barrier Coverage with Mobile Camera Sensors ............................. 73
Xiaolan Liu, Bin Yang, Shenghui Zhao, and Yuanyuan Fan

DEDV: A Data Collection Method for Mobile Sink Based on Dynamic
Estimation of Data Value in WSN .............................................................................. 77
Xiaoqing Gong, Xuan Wang, Jun Guo, Anwen Wang, Dan Xu, Na An,
Xiaojiang Chen, Dingyi Fang, and Xia Zheng

Optimal Relay-Destination Pair Selection Mechanism for Secure
Communications in Wireless Cooperative Relay Networks .................................. 84
Pinchang Zhang, Yuanyu Zhang, Bin Yang, and Xiaolan Liu

Bulk-n-Pick Method for One-to-Many Data Transfer in Dense Wireless Spaces ............... 90
Marat Zhanikeev

Improved Node Localization for WSN Using Heuristic Optimization
Approaches .................................................................................................................. 95
Chin-Shiou Shieh, Van-Oanh Sai, Yuh-Chung Lin, Tsair-Fwu Lee,
Trong-The Nguyen, and Quang-Duy Le

An Improved Algorithm of Node Credibility Management for Lightweight WSN ................ 99
Liye Peng, Fangwei Wang, and Changguang Wang
Session A3
Power Allocation Optimization for Full-Duplex D2D Communications Underlaying Cellular Networks .......................................................................................................................... 103
Boqun Zuo, Lingge Jiang, Chen He, and Zhuxian Lian
Lina Yang, Shining Li, Weidong Yang, Gang Liu, and Jinhui Yuan
An Auction-Based Approach for Hybrid Access in Macro-Femto Networks ................................................. 116
Xun Wang, Tingli Mao, Gang Feng, and Wei Cao

Session A4
Research of the Enhanced Anti-Xprobe2 ........................................................................................................ 122
Ma Junliang, Wang Xili, and Xiao Bing
A Transceiver Design for Limited Feedback AF MIMO Relay System with MMSE-SIC Receiver .......................................................................................................................... 126
Fan Shuo Tseng and Chao-Yuan Hsu
Using SDN and NFV to Implement Satellite Communication Networks .................................................. 131
Taixin Li, Huachun Zhou, Hongbin Luo, Qi Xu, and Yue Ye
A New Interference Aware Routing Metric for Multi-radio Multi-channel Wireless Mesh Networks ..................................................................................................................... 135
Ji Wen Jiang, Wang Yichuan, Liu Yanxiao, Zhu Lei, Ma Weigang, and Yang Li
On a Tangible Interface in Interactive Media Display Using Mobile Phones .............................................. 141
Kuei-Ping Shih, Su-Chu Hsuo, Yen-Da Chen, Yang-Pu Hsiao, and Ramon Dario Borja Martinez
The Design and Implementation of a NoC System Based on SoCKit .......................................................... 145
Hongwei Ye, Quan Wang, Pengfei Yang, Wei Li, and Zhibin Yu

Session B1
Using Path Label Routing in Wide Area Software-Defined Networks with OpenFlow ................................................................. 149
Weidong Lin, Yukun Niu, Xia Zhang, Lingbo Wei, and Chi Zhang
A Hierarchical Quadtree-Based Link State Routing Scheme for Routing Table Compression ................................................................. 155
Jingjing Wu, Tianshu Fang, Chang Chen, and Chi Zhang
Secure Transmission via Jamming in Wireless Networks with Possion Spatially Distributed Eavesdroppers ............................................................................................................... 161
Xiang Hu, Xing Zhang, Haozhou Huang, and Yongjing Li
Exact Secrecy Throughput of MANETs with Guard Zone .................................................................167
Xiaochen Li, Shuangrui Zhao, Yuanyu Zhang, Yulong Shen, and Xiaohong Jiang

The Delay-Security Trade-Off in Two-Hop Buffer-Aided Relay Wireless Network .....................................................................................................................................................173
Xuening Liao, Zhenqiang Wu, Yuanyu Zhang, and Xiaohong Jiang

Design Issues of Enhanced DDoS Protecting Scheme under the Cloud Computing Environment ........................................................................................................................................178
Shin-Jer Yang and Yu-Zhan Li

Dynamic Power Control for Maximizing System Throughput in Enterprise Femtocell Networks .............................................................................................................................................................184
Xuan Zhou, Gang Wang, Gang Feng, Shuang Qin, and Yantao Guo

Spoofing Attacks against FM Indoor Localization .....................................................................................190
Zi Li, Yao Liu, Qingqi Pei, and Lei Bai

A Preliminary Design and Implementation of Location-Based Mobile Advertising Schemes with Plot Placement Animation over a Cyber-Physical System ......................................................................................................................................................196

Session B2

Backfill: An Efficient Header Compression Scheme for OpenFlow Network with Satellite Links ..................................................................................................................................................................................................................................................202
Yukun Niu, Chaobiao Wu, Lingbo Wei, Bin Liu, and Jian Cai

Privacy-Preserving Cloud-Based Firewall for IaaS-based Enterprise ........................................................................................................................................................................................................................................206
Hualong Sheng, Lingbo Wei, Chi Zhang, and Xia Zhang

A Lightweight and Secure Data Authentication Scheme with Privacy Preservation for Wireless Sensor Networks ..................................................................................................................................................................................210
Hong Zhong, Lili Shao, and Jie Cui

Scheduling for Data Collection in Multi-hop IEEE 802.15.4e TSCH Networks .........................................218
Tzung-Shi Chen, Shu-Yu Kuo, and Chia-Hsu Kuo

The Study of Enhance the 4G LTE-A Mobile Network Deployment Efficiency ........................................222
Hong-Ren Wang, Wu-Ting Liu, Chau-Yun Hsu, Chuan-Hsin Peng, and Tsung-Sheng Kuo

Evaluation of the Redundant Traffic Reduction Node Using the Packet Cache Coping with Different Byte Offsets among Streams ........................................................................................................................................................................227
Wataru Yokota, Kenji Ichijo, and Akiko Narita

Autonomous Decision of Function of the Redundant Traffic Reduction Node Using a New IP Option ........................................................................................................................................................................................................................................233
Tomohiro Yoshida, Yamato Ikeda, Kenji Ichijo, and Akiko Narita
MVNC: A SDN-based Multi-tenant Virtual Network Customization Mechanism in Cloud Data Center .................................................................................................................. 239

Kai Li, Chun Wang, Qiwei Shen, Jingyu Wang, and Qi Qi

Optimization of Computation-Intensive Applications in cc-NUMA Architecture ........................................... 244

Ming Zhang, Naijie Gu, and Kaixin Ren

An Efficient Range Query Model over Encrypted Outsourced Data Using Secure K-D Tree ......................................................................................................................... 250

Yanguo Peng, HuiLi, Jiangtao Cui, Yixiao Zhu, and Changgen Peng

Session B3

Distributed Secure Service Composition with Declassification in Mobile Network ........................................................................................................................................................................ 254

Ning Xi, Cong Sun, Jianfeng Ma, Yulong Shen, and Di Lu

A Differential Privacy Incentive Compatible Mechanism and Equilibrium Analysis ........................................................................................................................................................................ 260

Hai Liu, Zhenqiang Wu, and Lin Zhang

A Group-Based Ternary Query Splitting Protocol for Tag Identification in RFID Systems ........................................................................................................................................................................ 267

Yi Jiang, Ruonan Zhang, Wei Cheng, Bin Li, and Wei Sun

DFTCP: A TCP-friendly Delay-Based High-Speed TCP Variant ................................................................................ 273

Xu Zhang, Naijie Gu, Junjie Su, and Kaixin Ren

Session B4

A Method for Information Security Risk Assessment Based on the Dynamic Bayesian Network ........................................................................................................................................................................ 279

Jiao Wang, Kefeng Fan, Wei Mo, and Dongyang Xu

(k, n) Secret Sharing Scheme against Two Types of Cheaters ................................................................................ 284

Yanxiao Liu, Yichuan Wang, Lei Zhu, Jiwen Jiang, and Xinhong Hei

Improved Productivity of Mosaic Image by K-medoids and Feature Selection Mechanism on a Hadoop-Based Framework ........................................................................................................................................................................ 288

Jau-Ji Shen, Chin-Feng Lee, and Kun-Liang Hou

A Mechanism for IoT Service Provision Based on Transient Private Cloud ................................................................................................................................. 294

Guilin Chen, Haibao Chen, Huibin Wang, and Shenghui Zhao

Unified Software-Defined Online Network Experiment Platform for Campus Education ........................................................................................................................................................................ 299

Siyu Wang, Rentao Gu, Yuefeng Ji, Youqiang Hu, Qize Guo, Yanxia Tan, and Chen Meng
A Real-Time Fraud Detection Algorithm Based on Intelligent Scoring for the Telecom Industry ...............................................................303
Kun Niu, Haizhen Jiao, Nanjie Deng, and Zhipeng Gao

Session C1
Analysis of an SEIVR Epidemic Model with Partial Immunization and Nonlinear Infection Rate ......................................................307
Fangwei Wang, Changguang Wang, Dongmei Zhao, and Yunkai Zhang
ISO/IEEE 11073-Based Healthcare Services over IoT Platform Using 6LoWPAN and BLE: Architecture and Experimentation ...........................................313
Hyung-Woo Kang, Cheol-Min Kim, and Seok-Joo Koh

A Pixel Value Ordering Predictor for High-Capacity Reversible Data Hiding ........................................................................319
Chin-Feng Lee and Yu-Ju Tseng
Cumulative Space Time Coding-Based Visible Light Cell Identification for Large-Scale Indoor Environment ........................................325
Runmei Zhao, Zhitong Huang, Wei Li, and Yuefeng Ji

Load Prediction-Based Automatic Scaling Cloud Computing ........................................330
Tao Li, Jingyu Wang, Wei Li, Tong Xu, and Qi Qi
Dynamic Load-Balancing Mechanism for Software-Defined Networking ................................................................................336
Wen-Hwa Liao, Ssu-Chi Kuai, and Cheng-Hsiu Lu

Energy Conservation Scheme for IEEE 802.15.4 Based Battery-Free Wireless Sensor Networks .........................................................342
Yi-Hua Zhu, Hangyu Lv, Yanyan Li, Ertao Li, and Kaikai Chi
Shared Risk Link Group Enumeration of Node Excluding Disaster Failures ........................................................................349
Balázs Vass, Erika Bérczi-Kovács, and János Tapolcai

Session C2
Using Pinch Technology to Achieve Augmented Reality in Multiple Devices .................................................................355
Chih-Yung Chang, Su-Chu Hsu, Chao-Tsun Chang, Jian-Cheng Chen, and Jian-Ning Zeng

Shihi-Chang Huang, Chao-Che Chang, and Hong-Yi Chang

Uplink Shared Resource Scheduling for Device-to-Device Underlay Communication with Least Transmission Power Resource Selection and Guaranteed Link Quality ................................364
Jen-Yi Pan, Ko-Wei Chang, and Houng-Wei Lin
IPARBC: An Improved Parallel Association Rule Based on MapReduce Framework 370

Hong-Yi Chang, Zih-Huan Hong, Tu-Liang Lin, Wan-Kun Chang, and Yi-Ying Lin

A Novel Incremental Data Mining Algorithm Based on FP-growth for Big Data 375

Hong-Yi Chang, Jia-Chi Lin, Mei-Li Cheng, and Shih-Chang Huang

An Effective Wireless Charger Deployment Method for Complete Coverage in Wireless Chargeable Sensor Networks 379

Tu-Liang Lin, Sheng-Lin Li, Hong-Yi Chang, Wan-Kun Chang, and Yi-Ying Lin

A Parameterized Wildcard Method Based on SDN for Server Load Balancing 383

Tu-Liang Lin, Chen-Hao Kuo, Hong-Yi Chang, Wan-Kun Chang, and Yi-Ying Lin

Session C3

EmuStack: An OpenStack-Based DTN Network Emulation Platform 387

Haifeng Li, Huachun Zhou, Hongke Zhang, and Bohao Feng

A K-Means Based Small Cell Deployment Algorithm for Wireless Access Networks 393

Gwo-Jong Yu and Kuan-Yi Yeh

Dual-Wavelength Conversion of 16QAM Signals Based on Four Wave Mixing in Semiconductor Optical Amplifier 399

Hongxiang Wang, Yuqian Yang, and Yuefeng Ji

On the Design and Implementation of an Innovative Smart Building Platform 404

Hong-Ren Wang, Chau-Yun Hsu, Ting-Ren Jian, and An-Yi Chen

Cache Management for Adaptive Scalable Video Streaming in Vehicular Content-Centric Network 410

Yiran Wei, Changqiao Xu, Mu Wang, and Jianfeng Guan

Session C4

Research on Classifying Web Information with Latent Semantic Based on Modified LDA Model 415

Chunxiao Fan, Tianlin Zhao, Yuexin Wu, and Nan Gong

Utility Analysis of Network Coding for Coordinated Formation Flight in Unmanned Aerial Vehicles 419

Zhang Xiaoyu, Miao Lin, and Shang Tao

A Novel Approach of Fault Management and Restoration of Network Services in IoT Cluster to Ensure Disaster Readiness 423

Bishnu Prasad Gautam, Katsumi Wasaki, and Narayan Sharma

ECCN: An Elastic Customized Cloud Network Platform 429

Yuze He, Wei Li, Lejian Zhang, Jingyu Wang, and Qi Qi
A Formal Validation Method for Trustworthy Services Composition ........................................433
   Yuemin Li, Shenghui Zhao, Hailun Diao, and Haibao Chen

Data Collection Scheme Based on Wake-Up in Body Area Nanonetworks ..................................438
   Bo Liu, Pengfei Lu, Xuanwen Hao, Xiaohong Jiang, and Zhenqiang Wu

Author Index ...................................................................................................................................444
