Message from the General Chairs .............................................................. xi
Messages from the Program Co-chairs .................................................. xii
Organizing and Program Committee ..................................................... xiii
Reviewers ............................................................................................... xvii

Session 1A: Wireless Sensor Networks
An Energy-efficient Broadcast Control Protocol for Wireless Sensor Networks ........................................... 3
    Bin Zeng, Lu Yao, and YongQian He
A Data Transmission Mechanism for Survivable Sensor Networks .......................................................... 9
    Ruiping Ma, Liudong Xing, Tongdan Jin, and Tailiang Song
Preserving Relay Connectivity and Coverage in Heterogeneous Wireless Sensor Networks .............................. 16
    Jun Wen, Jie Jiang, Guofu Wu, Dongsong Ban, and Wenhua Dou
TinyBee: Mobile-Agent-Based Data Gathering System in Wireless Sensor Networks .................................... 24
    Kaoru Ota, Mianxiong Dong, and Xiaolin Li

Session 1B: Storage Virtualization and Concurrency
A Performance Isolation Algorithm for Shared Virtualization Storage System .............................................. 35
Virtual Disk Image Reclamation for Software Updates in Virtual Machine Environments .................................. 43
    Bin Chen, Nong Xiao, Zhiping Cai, Fuyong Chu, and Zhiying Wang
Performance and Consistency Improvements of Hash Tree Based Disk Storage Protection ............................ 51
    Fangyong Hou, Dawu Gu, Nong Xiao, Fang Liu, and Hongjun He
Data Currency in Replicated Distributed Storage System ........................................................................... 57
    Bingheng Yan, Depei Qian, and Yuanqiang Huang
Session 2A: Grid Computing

Dynamic Grid Resource Scheduling Model Using Learning Agent .................................................................67

Bin Zeng, Jun Wei, and HaiQin Liu

Evaluating the Effect of Huge Page on Large Scale Applications .................................................................74

Panyong Zhang, Bo Li, Zhigang Huo, and Dan Meng

Group-by Query Process in Middleware of Large Scale Data Intensive Systems ............................................82

Huaiming Song, Mingyuan An, Yang Wang, Weiping Wang, and Ninghui Sun

Virtual Machine Scalability on Multi-Core Processors Based Servers for Cloud Computing Workloads ..........................90

Muhammad Hasan Jamal, Abdul Qadeer, Waqar Mahmood, Abdul Waheed, and Jianxun Jason Ding

Session 2B: Security & Availability

An HTTP Extension for Secure Transfer of Confidential Data ........................................................................101

Masaru Takesue

An Aggregation-Based Raw Reputation Generation Approach ........................................................................109

Zhang Jianzhong, Zhang Tianyan, Lan Xiaofeng, and Xu Jingdong

Reliable Lightpath Routing in Optical Mesh Networks under Multiple Link Failures ..................................114

Shengli Yuan

Community-base Fault Diagnosis Using Incremental Belief Revision ...........................................................121

Yongning Tang, Guang Cheng, Zhiwei Xu, and Ehab Al-Shaer

Reconstruction of Worm Propagation Path by Causality ................................................................................129

Wei Shi, Qiang Li, Jian Kang, and Dong Guo

Session 2C: P2P and QoS

Context-Aware Routing for Peer-to-Peer Network on MANETs ....................................................................135

Nadir Shah and Depei Qian

A Teletraffic Perspective on Relay-Node Selection Strategy in VoP2P System .............................................140

Wen Kang Jia and Yaw-Chung Chen

Analysis of Internet Specific Area Topology Properties ...............................................................................148

Zhenhan Wei, Ming Chen, and Honghua Zhao

Probabilistic QoS Guarantees, Downlink and Uplink Scheduling Studies in a Bluetooth Piconet ..................156

Karima Maalaoui and Leila Saidane
Session 3A: Network Short Papers

A Comprehensive Evaluation of Routing Protocols for Ordinary and Large-Scale Wireless MANETs .................................................................167
  Hossein Ashtiani, Mohsen Nikpour, and Hamed Moradipour

Network Access Control Mechanism Based on Locator/Identifier Split .................................................................171
  Tu Rui, Su Jinshu, and Chen Feng

Network of Multi-Agent Traffic Controllers ...........................................................................................................175
  Ongard Sirisaengtaksin and Danil Safin

Application of Residuation Theory in Network Calculus .........................................................................................180
  Fan Baohua, Zhang Heying, and Dou Wenhua

Clustering and Constraints for Real-time Multicast ..............................................................................................184
  Wei Cheng, Shi Cheng, Chanle Wu, Jun Yue, Gang Ye, and Lian He

A Case for a Packet Management in a Network Terminal ...................................................................................188
  Yul Chu, Yan Bai, Amit Uppal, and Jae Sok Son

A Packet-Based Anomaly Detection Model for Inter-domain Routing .................................................................192
  Huayang Cao, Miao Wang, Xiaoqiang Wang, and Peidong Zhu

Distributed k-Coverage Verification Algorithm Based on Localized Distance Information in WSNs ..............196
  Xia Zhang and Cheng Wang

Formal Specification and Analysis of Intelligent Network Management System by Using Colored Petri Net .........................................................................................200
  Feng Yu, Junzhou Luo, Wei Li, and LaLin Jiang

Unattended Remote Attestation Delegation for Grid Computing ........................................................................204
  Ge Cheng

Session 3B: Systems and Architecture Short Papers

Feedback-Based Energy-aware Scheduling Algorithm for Hard Real-time Tasks .................................................................211
  Dong-song Zhang, Shi-yao Jin, Tong Wu, and Hua-wei Li

An Enhanced HyperTransport Controller with Cache Coherence Support for Multiple-CMP .................................................................215
  Huadong Wang, Dan Tang, Xiang Gao, and Yunji Chen

A Parallel Memory System Model for Multi-core Processor .....................................................................................219
  Mengxiao Liu, Weixing Ji, Xing Pu, and Jiaxin Li

Efficiency-Aware QoS DRAM Scheduler ...................................................................................................................223
  Menghao Su, Xiang Gao, Yunji Chen, Qi Liu, and Longbing Zhang

Stress Distributions on the Slider with Different Accommodation Coefficients ..................................................227
  Jincai Chen, Gongye Zhou, Wei Sun, and Libang Zhang

A Scalability Analysis of the Symmetric Multiprocessing Architecture in Multi-Core System .................................................................231
  Yuan Qingbo, Bao Yungang, Chen Mingyu, and Sun Ninghui
Fast Way-Prediction Instruction Cache for Energy Efficiency and High Performance .................................................................235
Cuiping Xu, Ge Zhang, and Shouqing Hao

An Approach of Scalable MPEG-4 Video Bitstreams with Network Coding for P2P Swarming System .........................................................239
Quan Gu, Jingli Zhou, and Kai Ouyang

Implementation of G.729 Codec Based on Mediastreamer Technology ..................................................................................243
Liting Hu, Xiangping Kong, Lianfen Huang, Hezhi Lin, Jianan Lin, Yan Yao, and Xueyuan Jiang

Session 3C: Storage and P2P Short Papers

HMF: High-available Message-passing Framework for Cluster File System .................................................................249
Dong Yang, Zhuan Chen, Rongfeng Tang, Jin Xiong, and Dan Meng

VSD: A Framework of Stackable Virtual Snapshot Device ..................................................................................253
Na Wen-wu, Zhu Xu-dong, Ke Jian, Xu Jin-ping, Zhang Jun-wei, Bu Qing-zhong, and Xu Lu

Enhancing the Scalability of Blue Whale Cluster File System in Video-editing Environment .................................................................257
Chengxiang Si, Xiaoxuan Meng, Junwei Zhang, and Lu Xu

TS-A: A Hierarchy Extended Cellular Automata Model for Complex Networking Storage System .................................................................261
Jincai Chen, Lianlan Yuan, and Gongye Zhou

Change State Capture in Service Aware Storage ..................................................................................265
Zhaobin Liu, Huihui Zhang, Wenyu Qu, and Tianquan Li

BCD: To Achieve the Theoretical Optimum of Spatial Locality Based Cache Replacement Algorithm .................................................................269
Zhu Xudong, Ke Jian, and Xu Lu

Research of P2P Routing Security Based on Positive Detection Mechanism ..................................................................................273
Chuwei Lu

Transmission Scheduling in Data-Driven Peer-to-Peer Streaming towards Optimal Throughput .................................................................277
Jiqing Wu, Yuxing Peng, and Feng Liu

A Global Trust Model of P2P Network Based on Distance-Weighted Recommendation ..................................................................................281
Xueming Li and Jianke Wang

Session 4A: Disks and File Systems

3DNBS: A Data De-duplication Disk-Based Network Backup System ..................................................................................287
Tianming Yang, Dan Feng, Jingning Liu, Yaping Wan, Zhongying Niu, and Yuchang Ke

A Storage Slab Allocator for Disk Storage Management in File System ..................................................................................295
Junwei Zhang, Jingliang Zhang, Jiangang Zhang, Xiaoming Han, and Lu Xu
Early Experiences with Write-Write Design of NFS over RDMA ................................................................. 303
  Bo Li, Panyong Zhang, Zhigang Huo, and Dan Meng
FAXtrac: Fast Extraction of Disk Layout ........................................................................................................ 309
  Xiaowen Chu, Kai Ouyang, and Xiaolei Chang
MHPR: Multi-head Parallelism and Redundancy Disk Model ................................................................. 315
  Yang Hu, Dan Feng, Shu Ping Zhang, and Jing Ning Liu

Session 4B: Network Analysis & Synchronization

Simulation Analysis of Probabilistic Timing Covert Channels ................................................................. 325
  Yunchuan Guo, Lihua Yin, Yuan Zhou, Chao Li, and Li Guo
Synchronizing Parallel Data Streams via Cross-Stream Coding .......................................................... 333
  Shaofeng Liu, Jurgen P. Schulze, and Tomas A. Defanti
A Trace Measurement and Analysis System for the Multi-Links CERNET Backbone ............................................................. 341
  Cheng Guang, Yongning Tang, Jiang Jiexin, and Ding Wei
Reducing Communication Overhead in Threshold Monitoring with Arithmetic Aggregation ............................................................. 347
  Yuanqiang Huang, Yongjian Wan, Yinan Ren, BingHeng Yan, Zhongzhi Luan, and Depei Qian

Session 4C: Computer Architecture

The Design of Asynchronous Microprocessor Based on Optimized NCL_X Design-Flow ............................................................. 357
  Gang Jin, Lei Wang, and Zhiying Wang
Efficient Physical Design Methodology for Reducing Test Power Dissipation of Scan-Based Designs ............................................................. 365
  Jun Xu and Xiangku Li
Hardware/Software Co-Simulation for Last Level Cache Exploration ............................................................. 371
  Tao Wang, Qigang Wang, Dong Liu, Michael Liao, Kevin Wang, Lu Cao, Li Zhao, Ravi Iyer, Ramesh Illikkal, Liang Wang, and John Du
Implementation of OpenVG Path and Paint Algorithms on Synchronous Data Triggered Architecture with Optimization ............................................................. 379
  Ma Sheng, Huang Libo, Wang Zhiying, and Dai Kui
Architecture Level Energy Modeling and Optimization for Multi-Ported Giga-Hz Physical Register File ............................................................. 386
  Ge Zhang, Xu Yang, and Yiwei Zhang

Session 5A: Storage Security

TH-CDP: An Efficient Block Level Continuous Data Protection System ............................................................. 395
  Yonghong Sheng, Dongsheng Wang, Jinyang He, and DaPeng Ju
Design and Implementation of Self-securing Disk ......................................................................................... 405
  Mengqi Zeng, Dawu Gu, Fangyong Hou, Yuanyuan Zhang, and Tao Cheng
Can We Improve Energy Efficiency of Secure Disk Systems without Modifying Security Mechanisms? .................................................................413
  Xiaojun Ruan, Adam Manzanares, Shu Yin, Mais Nijim, and Xiao Qin
Identification and Authentication in Large-Scale Storage Systems .................................................................421
  Zhongying Niu, Hong Jiang, Ke Zhou, Tianming Yang, and Wei Yan

Session 5B: High-End Systems and Modeling

Update Maps – A New Abstraction for High-Throughput Batch Processing ................................................431
  Steffen Viken Valvåg and Dag Johansen
Gemini NI: An Integration of Two Network Interfaces ........................................................................439
  Kai Wang, Xiaomin Li, Xuejun An, and Ninghui Sun
An Array Computer for Low-and Intermediate-Level Image Processing ...........................................447
  Kaikun Dong, Yang Liu, Li Guo, and Mingzeng Hu
Fault-Tolerant Online Backup Service: Formal Modeling and Reasoning ........................................452
  Hua Wang, Ke Zhou, and Ling Yuan

Author Index ............................................................................................................................................461
