# Table of Contents

**Preface**                                                                                               ................................................................. xxv
**Conference Organization**                                                                                  ................................................................. xxvi

---

### Keynote Speeches

**Future Technological Challenges for High Performance Computers** ................................................................. 2  
*T. Watanabe*

**An Agile Programming Model for Grid End Users** .......................................................................................... 3  
*Z. Xu, C. Shu, H. Yu, and H. Liu*

**Scalable and Practical Nonblocking Switching Networks** ............................................................................. 8  
*S. Q. Zheng*

---

### Session 1B1: Interconnection Networks

**Rearrangeability of the Tandem Cascade of Banyan-Type Networks** ............................................................. 11  
*X. Tan, S.-Y. R. Li, and Y. Shen*

**ReCord: A Distributed Hash Table with Recursive Structure** ....................................................................... 16  
*J. Zeng and W.-J. Hsu*
### Session 1B2: Parallelization Techniques

Session 1B4: Grid Computing Systems—I

Design and Implementation of Grid Monitoring System Based on GMA .............. J. Liao, H. Cai, P. Jiang, and M. Chen
Heterogeneous Resource Selection with Portfolio Optimization in Grid Economy ........................................................................ Y. Hua, C. Wu, H. Zhang, and L. Wu
WGMDS: A WSRF-Compliant Information Service on Wireless Grids .................. J. Yang, M. Li, C. Huang, and C. Gao
A Novel Security Model Based on Virtual Organization for Grid ......................... X. Wu, G. Yang, J. Shen, and Q. Zhou

Session 1B5: Security, Reliability, and Fault-Tolerance—I

A Simple Process Calculus for the Analysis of Security Protocols ......................... Y. Gu, Y. Fu, and G. Li
D-S Evidence Theory and Its Data Fusion Application in Intrusion Detection ......... J. Tian, W. Zhao, R. Du, and Z. Zhang
Efficient Traitor Tracing Scheme Based on NTRU ............................................. X. Lv, B. Yang, and C. Pei
A Study of Intrusion Signature Based on Honeypot ............................................ J. Tian, J. Wang, R. Li, and X. Yang
The Architecture of the Large-scale Distributed Intrusion Detection System ......... Y. Chu, J. Li, and Y. Yang

Session 1C1: Network Architectures

Active Probe of Available Bandwidth: Analysis and Improvement ....................... C. Zhu, C. Pei, Y. Yi, and D. Quan
CISOQ: A Practical High-Performance Packet Switch Architecture for the Support of Multicast Traffic ........................................ X. Hu, J. Qu, B. Wang, and X. Li
Overlay Multicasting over Multihomed Proxies ................................................. X. Chen, R. Yang, Q. Xia, H. Shao, and W. Wang
Research on New Types of Network Architecture ................................................................. 149
  Y. Wang, M. Xia, F. Yi, and J. Zeng

Study on Network Topology Visualization Algorithm and Implement
Based on A* Algorithm........................................................................................................ 154
  W. Yuan, C. Pei, H. Xiao, C. Zhu, N. Chen, and Y. Yi

Session 1C2: Communication and Multimedia Systems

Construction of a Prototype of a Volume Communications Environment .................................. 158
  M. Watanabe, M. Okuda, and T. Matsuzawa

VoD Service Model and Performance Evaluation on the China’s High Performance
Broadband Information Network (3Tnet) .................................................................................... 163
  F. Lin, X. Wang, and X. Xue

Detecting BGP Misconfiguration for BGP/MPLS VPNs .......................................................... 168
  H. Liang, G. Teng, H. Wang, and Y. Gao

A New Tunnel Scheme for Multimedia Communications Traversing
NAT/Firewall in NGN .............................................................................................................. 171
  G. Zheng, Z. Xie, B. Wang, and G. He

Study of Channel Characteristics of Power Line Communications Networks .......................... 174
  M. Zhai, C. Liu, and H. Bi

The Maximal Rates of More General Complex Orthogonal Designs ........................................ 177
  H. Kan and H. Shen

Session 1C3: Wireless Networks and Mobile Computing—II

Research on Multi-constrained QoS Routing Scheme Using Mean Field Annealing ................. 181
  L. Liu and G. Feng

Data Dissemination Model for Location-Based Services .......................................................... 186
  K. Park, M. Song, and K.-S. Kong

A Cluster-Based Energy-Efficient Scheme for Sensor Networks ............................................ 191
  J. Zhang, B. Huang, L. Tu, and F. Zhang

Random Walk Routing for Wireless Sensor Networks ............................................................ 196
  H. Tian, H. Shen, and T. Matsuzawa

Secure Protocols Enhancement Based on Radio-Propagation Related Looser
Assumptions in Mobile Ad Hoc Networks .............................................................................. 201
  R. Yang, Q. Xia, Q. Pan, X. Huang, W. Wang, and M. Li
Session 1C4: Optical Networks

Dynamic Shared Path Protection Algorithm in WDM Mesh Networks under Service Level Agreement Constraints .............................................................. 205
   R. He, B. Lin, L. Li, and C. Gu

A Unified Framing Protocol for Hybrid Data Transport ................................................................. 210
   Z. Xu, C. Wang, C. Pei, and A. Wen

On-Line Routing in WDM-TDM Switched Optical Mesh Networks.............................................. 215
   A. Vishwanath and W. Liang

Wavelength Assignment for Parallel FFT Communication Pattern on Linear Arrays by Lattice Embedding ................................................................. 220
   Y. Chen and H. Shen

Splitter Placement Problem on Directed Fiber Trees ...................................................................... 225
   T. Hu and B.-H. Zhao

Session 1C5: Security, Reliability, and Fault-Tolerance—II

On the Effectiveness of Multi-similarity for Early Detection of Worms .......................................... 229
   H. He, M. Hu, H. Zhang, and Z. Tang

Intrusion Detection Based on an Improved ART2 Neural Network .................................................... 234
   D. Wu, J. Dai, and Z. Chi

Privacy Preserving ID3 Algorithm over Horizontally Partitioned Data ............................................ 239
   M.-J. Xiao, L.-S. Huang, H. Shen, and Y.-L. Luo

Computing the Reliability for Clustered Ad Hoc Networks .............................................................. 244
   D. Wu, Q. Li, and Z. Chi

A Disaster Recovery System Model in an E-Government System .................................................... 247
   K. Wang, Z. Cai, Z. Li, and L. Zhou

Trusted Computing-Based Security Architecture for 4G Mobile Networks .................................... 251
   Y. Zheng, D. He, W. Yu, and X. Tang

Intrusion Detection Combining Multiple Decision Trees by Fuzzy Logic ....................................... 256
   J. Tian, Y. Fu, Y. Xu, and J. Wang

A New Approach to Automatically Detect Worms ........................................................................... 259
   P. Wang, B.-X. Fang, and X.-C. Yun

Optimization of Intrusion Detection through Fast Hybrid Feature Selection ................................ 264
   K. M. Shazzad and J. S. Park
An Efficient Keys Agreement for Multi-party’s Communication
P. Zhang, C. Ye, X. Li, and X. Ma

Worm Detection in Large Scale Network by Traffic
Y. Xin, B.-X. Fang, X.-C. Yun, and H.-Y. Chen

Session 2A2: Wireless Networks and Mobile Computing—III

Adaptive Carrier Sensing and Packet Sending—An Alternative to Boost the Performance in Directional Communications
J. L. Bordim, T. Hunziker, and K. Nakano

An Efficient Key Management Scheme for Secure Sensor Networks
R. Du, H. Tu, and S. Wen

Design and Analysis of High Speed WLAN Systems with Adaptive Margin Technology
X. Li, N. Liu, C. Pei, K. Yi, and W. Kou

An Efficient Topology Maintenance Algorithm Based on Shortest Path Tree for Wireless Sensor Networks
Z. Shen, Y. Chang, X. Zhang, and C. Cui

Delay Character of a Novel Architecture for IEEE 802.16 Systems
N. Liu, X. Li, C. Pei, and B. Yang

Session 2A3: Ubiquitous Computing Systems

Developing Context-Aware Applications in Ubiquitous Computing Environments
J. Sun and Z. Wu

Reconfigurable Computing in Ubiquitous Computers: A Roadmap
L. Yan and Z. Liang

Design of a Security Management Middleware in Ubiquitous Computing Environments
Z. Jiang, K. Lee, Sangok Kim, H. Bae, Sangwook Kim, and S. Kang

An Adaptable Software Architecture Based on Mobile Components in Pervasive Computing
S. Han, S. Zhang, Y. Zhang, and C. Fan

On-Chip Debug for an Asynchronous Java Accelerator
Z. Liang, J. Plosila, L. Yan, and K. Sere

Design of Virtual Personal Computing Environment for Ubiquitous Computing
X. Su, J. Li, F. Jiang, H. Shi, J. Guo, and Z. Zhu
Session 2A4: Internet Computing and Web Technology—II

Web Media Service Based on Streaming Player Supporting Ubiquitous Environment ..............................................................................................................................................................320
Sangok Kim, K. Lee, Z. Jiang, and Sangwook Kim

Design and Implementation of a Script Language Based On-Demand Service Framework.............................................................................................................. ......................................323
Z. Huang and C. He

Integration and Share of Spatial Data Based on Web Service ............................................................................................................................................328
X. Ma, Q. Pan, and M. Li

Ontology-Based 3D Body Scanning Data Sharing System .............................................................................................................................................333
X. Zhu and X. Zhang

Optimal Selection of Web Services for Composition Based on Interface-Matching and Weighted Multistage Graph.............................................................................................................................................336
Y. Gao, B. Zhang, J. Na, L. Yang, Y. Dai, and Q. Gong

Research on Improved Role Hierarchy Model in Extended Organization PKI Networks .............................................................................................................................................339
S. Zhang and B. Wang

Session 2A5: Simulation and Performance Evaluation—I

Performance Comparison between VOPP and MPI ..............................................................................................................................................................343
Z. Huang, M. Purvis, and P. Werstein

Simulating and Improving Probabilistic Packet Marking Schemes Using Ns2..............................................................................................................................................................348
Q. Li, H. Zhu, M. Zhang, and J. Ju

Research on the Performance Analysis of the Concurrent System ..............................................................................................................................................................353
J. Guo, M. Liu, and L. Liu

Component Based Performance Prediction for Network Processor Based System ..............................................................................................................................................................356
H. Xiao, L. Zhang, and D. Wu

Simulation-Based Optimization Strategy for Liquid Fueled Multi-stage Space Launch Vehicle ..............................................................................................................................................................359
S. Akhtar and L. He

Session 2B1: Security, Reliability, and Fault-Tolerance—IV

Wrapping Client-Server Application to Web Services for Internet Computing ..............................................................................................................................................................366
H. Guo, C. Guo, F. Chen, and H. Yang

A New Algorithm to Solve Synchronous Consensus for Dependent Failures ..............................................................................................................................................................371
J. Wang and M. Song
An Efficient Asynchronous Proactive RSA Scheme .................................................................376  
R. Zhang and K. Chen

An Efficient Group Key Management Scheme: Link Tree Protocol ........................................381  
J. Zhang, F. Ma, D. Gu, and Y. Bai

Fast Two Phrases PPM for IP Traceback .......................................................................................386  
Q. Li, Q. Feng, L. Hu, and J. Ju

**Session 2B2: Grid Computing Systems—II**

Workflow-Based Remote-Sensing Image Processing Application in ImageGrid.................................................................390  
R. Zheng, H. Jin, Q. Zhang, and Y. Li

JSChord: A Peer-to-Peer System to Achieve Max Throughput .......................................................................................395  
Y. Shao, F. Hong, and M. Li

An Adaptive Advance Reservation Mechanism for Grid Computing .........................................................400  
L. Wu, C. Wu, J. Cui, and J. Xing

Dynamic Role and Context-Based Access Control for Grid Applications .........................................................404  
H. Yao, H. Hu, B. Huang, and R. Li

Integrating Agent and Web Service into Grid Service Workflow System .........................................................407  
Z. Zhai, Y. Yang, W. Guo, and Z. Tian

**Session 2B3: Software Technology and Programming Languages**

Role Based Platform Independent Web Application Modeling .......................................................................................411  
C. He, W. Tu, and K. He

Chocolat/SMV: A Translator from CafeOBJ into SMV .......................................................................................416  
K. Ogata, M. Nakano, M. Nakamura, and K. Futatsugi

Formal Description and Complexity Analysis of Routing in Mobile Ad Hoc System .........................................................421  
J. Xie and L. Huang

Coalgebraic Component Specification and Verification in RSL .......................................................................................424  
M. Sun, B. K. Aichernig, and N. Zhang

Software Component Model for Network Processor Based System .......................................................................................427  
H. Xiao, L. Zhang, and D. Wu

A Segment-Based Approach of Defending against Buffer Overflow Attacks .......................................................................................430  
Y. Tan, J. Zheng, and Y. Cao
Session 2B4: Agent Technology—I

An OO-Based Design Model of Software Agent ................................................................. 434  
   J. Li, X. Mao, and Y. Shu

A Novel Peer-to-Peer Intrusion Detection System Using Mobile Agents in MANETs ......................................................... 441  
   K. Xiao, J. Zheng, X. Wang, and X. Xue

A Survey of Mobile Agent-Based Fault-Tolerant Technology ........................................ 446  
   W. Qu, H. Shen, and X. Defago

Agent-Oriented Early Requirement Analysis of Distributed Simulation Environment of Fluid Flow ........................................ 451  
   J. Li, Z. Qi, and Z. Chen

Research of Multi-agent System Model and Learning Method ........................................... 456  
   Y. Zhang and Y. Han

Session 2B5: Simulation and Performance Evaluation—II

How the Enterprise Choosing Strategic Action: Modeling, Algorithm and Simulation .............................................................. 461  
   Y. Chen, X. Wang, G. Wang, and W. Zhu

An Asynchronous Event Relation Model for Monitoring Distributed System .......................... 466  
   M. Chen and B. Wan

A Distributed Architecture for Network Performance Measurement and Evaluation System ........................................................................ 471  
   H. Sun, B. Fang, and H. Zhang

A Study of Parallel Prefetching Algorithms Using Trace-Driven Simulation ............................ 476  
   D. Hu, C. Xie, and C. Bin

Performance Evaluation of SLIM and DRBL Diskless PC Clusters on Fedora Core 3 .......................................................... 479  
   C.-T. Yang, P.-I Chen, and Y.-L. Chen

Session 2C1: Security, Reliability, and Fault-Tolerance—V

Access Control List Mediation System for Large-Scale Network ........................................ 483  
   K. Lee, Z. Jiang, Sangok Kim, Sangwook Kim, and Sunkyung Kim

An Efficient Protocol for the Problem of Secure Two-Party Vector Dominance ........................ 488  
   Y. Sang, H. Shen, and Z. Zhang

A Brief Comparative Study on Analytical Models of Computer System Dependability and Security .................................................. 493  
   Z. Zhang, H. Shen, X. Defago, and Y. Sang
Fault-Tolerance Schemes for Hierarchical Mesh Networks ................................................................. 498
  J. Zurawski and D. Wang

Enhancing Attack Survivability of Gnutella-Like P2P Networks by Targeted Immunization Scheme ................................................................. 503
  X. Huang, Y. Li, R. Yang, and F. Ma

Session 2C2: Grid Computing Systems—III

JSGrid: An Environment for Heterogeneous Cluster Computing ........................................................... 507
  K. Takeda, S. Ono, C. J. Ashley, and S. Nakayama

A Scheduling Method for Divisible Workload Problem in Grid Environments ........................................ 513
  N. T. Loc, S. Elnaffar, T. Katayama, and H. T. Bao

Design and Implementation of TIGER Grid: An Integrated Metropolitan-Scale Grid Environment ................................................................. 518
  C.-T. Yang, K.-C. Li, W.-C. Chiang, and P.-C. Shih

A Run-Time Scheduling Policy for Dependent Tasks in Grid Computing Systems .................................. 521
  H. Jin, Y. He, W. Wen, and H. Liu

Integration Patterns of Grid Security Service .................................................................................. 524
  X. Qu, X. Yang, J. Zhong, and X. Lv

MAS Organization: Design, Enforcement and Instantiation ................................................................. 529
  C. Ye, K. Xie, Y. Chen, and X. Wang

Session 2C3: Internet Computing and Web Technology—I

Incentives for Participating in a Hybrid Peer-to-Peer System .................................................................... 533
  G. Sun, G. Chen, and J. Wu

Development of an Internet Home Automation System Using Java and Dynamic DNS Service ............... 537
  X. Zhang, J. Sun, and L. Zhou

Remote Monitoring of Air-Quality over Internet .................................................................................. 540
  H. Wang and R. Ma

Using Semantic Web Technologies to Specify Constraints of RBAC ........................................................ 543
  D. Wu, J. Lin, Y. Dong, and M. Zhu

Verifying Web Services Composition: A Transformation-Based Approach ............................................. 546
  Y. Yang, Q. Tan, Y. Xiao, J. Yu, and F. Liu

A Case of Application-Level Multicast for Real-Time Video Delivery over Internet ................................ 549
  Z. Liu and G. He
Session 2C4: Agent Technology—II

A Study of Distributed Parallel Processing for Queen Ant Strategy in Ant Colony Optimization ................................................. 553
I. Iimura, T. Ito, K. Hamaguchi, and S. Nakayama

How to Build Bargaining Agents in the E-Commerce Modeling and Analysis ................................................................. 558
Y. Chen, X. Wang, C. Ye, and W. Zhu

Multi-agent-oriented Modeling for Intelligence Reconnaissance System .................................................................................. 563
X. Li, X. Liu, and N. Hao

Describer: Service-Oriented Multiagent Architecture for Mobile Environment ............................................................... 566
Z. Liu, D. Wang, and H. Sheng

A Layered Resource Management Model in P2P System ........................................................................................................... 569
D. Wang and R. Zhao

Session 2C5: Tools and Environments for Software Development

Collaborative MPEG-4 Contents Authoring, Presentation and Interaction in a Mobile Environment ........................................ 573
S. Li, SangWook Kim, and SunKyung Kim

A Systems Programming Language for Wireless Networked Embedded Systems ................................................................. 578
X. Luo, K. Zheng, Z. Wu, and Y. Pan

A Message-Based Software Architecture Style for Distributed Application ................................................................................... 583
G. Tan, X. Li, J. Wu, H. Zhao, and C. Li

An ECA Rules Based Middleware Architecture for Wireless Sensor Networks ........................................................................... 586
C. Zhang, M. Li, and Q. Pan

Design and Implementation of a Distributed Simulation System of 3D Sights .............................................................................. 589
J.-L. Du and C.-S. Tian

Simulating Large-Scale Traffic Aggregation in an Automatic Switched Optical Network ........................................................................ 594
H. Wang, X. Wang, and X. Xue

Session 3A1: Parallel and Distributed Algorithms—I

Multi-session Partitioning for Parallel Timing Optimization ......................................................................................................... 598
J. Kim, J. Neves, and M. Papaefthymiou

An O(1) Time Parallel Algorithm for the Dominance Counting and 3D Block-Based Medial Axis Transform on AROB .................. 603
S.-Y. Lin, S.-J. Horng, T.-W. Kao, and Y.-R. Wang

Optimal Routing in a Small-World Network .......................................................................................................................... 610
J. Zeng and W.-J. Hsu
A Distributed Self-Stabilizing Algorithm for Finding a Connected Dominating Set in a Graph ................................................................. 615
  A. Jain and A. Gupta

Efficiency of Local Genetic Algorithm in Parallel Processing ........................................................................................................ 620
  G. Peng, T. Nakatsu, I. Iimura, and S. Nakayama

Some New Parallel Fast Fourier Transform Algorithms .................................................................................................................. 624
  C. Zhong, G. Han, and M. Huang

Session 3A2: Wireless Networks and Mobile Computing—IV

GLB-DMECR: Geographic Location-Based Decentralized Minimum Energy Consumption Routing in Wireless Sensor Networks ........................................................................................................ 629
  H. Hou, X. Liu, H. Yu, and H. Hu

Energy Adaptive Cluster-Head Selection for Wireless Sensor Networks ................................................................................................... 634
  Y. Liang and H. Yu

Comparative Analysis of Scheduling Algorithms in Ad Hoc Mobile Networking ............................................................................. 639
  H. Xu, X. Wang, and C. K. Toh

Research of TCP Vegas Congestion Control Algorithm in Ad Hoc Networks ................................................................................ 644
  C. Gong, Z. Zhao, and G. Wang

  X. Liu, H. Hou, J. Yang, H. Yu, and H. Hu

Session 3A3: Resource and Task Scheduling—I

LRC-RED: A Self-Tuning Robust and Adaptive AQM Scheme ........................................................................................................ 655
  N. Xiong, Y. Yang, X. Défago, and Y. He

Approximating Spanning Trees with Inner Nodes Cost ....................................................................................................................... 660
  R. Fleischer, Q. Ge, J. Li, S. Tian, and H. Wang

A Recursion Nearness Based Method for Characterizing IP Address ........................................................................................................... 665
  W. Ren and H. Jin

Mapping Resources for Network Emulation with Heuristic and Genetic Algorithms ............................................................................. 670
  Y. Liu, Y. Li, K. Xiao, and H. Cui

Accurate DCA Algorithm for TCP Congestion Avoidance .................................................................................................................. 675
  M. Xia, F. Yi, Y. Wang, and J. Zeng

AVS Generic Audio Coding ................................................................. 679
   R. Hu, S. Chen, H. Ai, and N. Xiong

New Ray-Space Interpolation Method for Free Viewpoint Video System ......................................................... 684
   L. Fan, M. Yu, G. Jiang, R. Wang, and Y. Kim

A Watermarking Method Using Quantization and Statistical Characteristics of Wavelet Transform ................. 689
   K. Byun, S. Lee, and H. Kim

New Multiple Description Layered Coding Method for Video Communication .................................................. 694
   M. Yu, X. Ye, G. Jiang, R. Wang, F. Xiao, and Y. Kim

Session 3A5: Network Routing—I

A QoS Multicast Routing Algorithm Based on Shrinking-Chaotic-Mutation Evolutionary Algorithm in IP/DWDM Optical Internet .......................................................... 698
   X. Wang, P. Liu, and M. Huang

A Distributed Entropy-Based QoS Multicast Routing Optimization Algorithm for MANET ................................. 703
   C. Gui and B. Sun

A Strategy for Routing Messages between Elements in a Hypercube with Faulty Links ..................................... 708
   D. Gichev

An On-Line Integrated Routing Algorithm in IP/MPLS over WDM Networks ...................................................... 711
   Y. Su, Z. Xu, and Z. Liu

A New Routing Method to Tolerate both Convex and Concave Faulty Regions in Mesh/Torus Networks ............ 714
   H. Gu, H. Shen, Z. Liu, and G. Kang

Session 4A1: Network Routing—II

A Dual-Channel Routing Scheme in Ad Hoc Networks ...................................................................................... 720
   Q. Wang, J. Sun, and G. Wang

A Hybrid Intelligent QoS Multicast Routing Algorithm in NGI ........................................................................ 723
   J. Wang, X. Wang, and M. Huang

Research of Multicast Server Selection Based on Ant Algorithm ....................................................................... 728
   Y. Liu, J. Cao, L. Tan, and K. Xu

Aggregation Tree Routing Algorithm for Dynamic Topology in Large Scale Networks ..................................... 733
   G. Tan, N. Han, Y. Liu, H. Yao, and D. Li
Solving the Vehicle Routing Problem with Stochastic Demands and Customers .....................................................736
  C. Fu, H. Wang, and L. Zhu

Session 4A2: Parallel and Distributed Algorithms—I

Encoding a Binary Search Tree in Constant Time on BSR .......................................................................................740
  L. Xiang, K. Cheng, and K. Ushijiam

Parallel Downloading Algorithm for Large-Volume File Distribution ........................................................................745
  H. Chen, Z. Gong, and Z. Huang

Localized Algorithm for Coverage in Wireless Sensor Networks.............................................................................750
  H. Xu, L. Huang, Y. Wan, and K. Lu

Spatial Gossip on the Percolation Model................................................................................................................755
  Q. Xia, R. Yang, and W. Wang

An Agent-Based Deadlock Detection/Resolution Algorithm for the AND Model..................................................759
  X. Cheng, X. Yang, and F. Jin

Ubicast: An Enhanced Application-Level Multicast Protocol....................................................................................762
  Z. Chu, Y. Yang, H. Tu, and W. Kong

Session 4A3: Applications—I

Towards Efficient and Scalable Searches for Mass-Market, Decentralized File-Sharing Applications..................768
  X. Huang, Y. Li, F. Liu, and F. Ma

Evolutionary Multiobjective Optimization in Engineering Management: An Empirical Study on Bridge Deck Rehabilitation..........................................................773
  C. Liu

Evaluation of Network Interface Controller on DIMMnet-2 Prototype Board...................................................778
  A. Kitamura, Y. Hamada, Y. Miyabe, T. Izawa, T. Miyashiro, K. Watanabe,
  T. Otsuka, N. Tanabe, H. Nakajo, and H. Amano

AMS Based Reconstruction Algorithm with Two-Dimensional Threshold for IP Traceback..........................781
  X. Yang, C. Pei, C. Zhu, and Y. Li

Development of the Real-Time Visualization System on Network..................................................................784
  H. Oiwa, Y. Asano, H. Matsumoto, and T. Matsuzawa

Structural Analysis Based on Baseline in Printed Mathematical Expressions Recognition..................................787
  X. Tian and H. Fan
Session 4A4: P2P Systems

Ontology-Based Clustering and Routing in Peer-to-Peer Networks ................................................................. 791
   J. Li and S. Vuong

A P2P Based Personal Digital Library for Community ......................................................................................... 796
   Y. Xu

A Novel Incentive Mechanism for P2P Systems ................................................................................................. 801
   T. Wang, X. Lu, and M. Hou

Research on Collaborative Service Solution in Ubiquitous Learning Environment ............................................. 804
   G. Zhang and Q. Jin

An Improved P2P Model Based on Chord ........................................................................................................ 807
   D. Yu, X. Chen, and Y. Chang

Session 4A5: Image Processing and Computer Graphics—II

Audio Watermarking Algorithm Based on Wavelet Packet and Psychoacoustic Model .............................................. 812
   R.-D. Wang, D.-W. Xu, and Q. Li

An Improved Basic-Unit Layer Rate-Control Scheme on H.264 ........................................................................ 815
   S. Su, S. Yu, and J. Zhou

Performance Study of Nonrigid Registration Algorithm for Investigating Lung Disease on Clusters ....................... 820
   F. Ino, Y. Tanaka, H. Kitaoka and K. Hagihara

A New Adaptive Multistage Median Filter ........................................................................................................ 826
   H. Song, G. Wang, and X. Zhao

Gabor Filterbank and Its Application in the Fingerprint Texture Analysis .............................................................. 829
   Y. Xu and X. Zhang

Iris Image Denoising Algorithm Based on Phase Preserving .................................................................................. 832
   J. Wang and R. Ding

A Novel High Gray Scale Data Driver for Passive Matrix OLED Displays ........................................................... 836

AnchorClu: An Anchorperson Shot Detection Method Based on Clustering ....................................................... 840
   X.-D. Luan, Y.-X. Xie, L.-D. Wu, J. Wen, and S.-Y. Lao

An Approach to Image Retrieval Based on Concept Lattices and Rough Set Theory ........................................... 845
   M. Li and T. Wang
Number and Letter Character Recognition of Vehicle License Plate Based on Edge
Hausdorff Distance ............................................................................................................. 850
S. Tang and W. Li

Residual Texture Based Fast Block-Size Selection for Inter-frame Coding
in H.264/AVC ................................................................................................................... 853
Z. Wang, Q. Peng, and Y. Zeng

Stereo Correspondence Using Color Based on Competitive-Cooperative
Neural Networks ................................................................................................................ 856
X. Hua, M. Yokomichi, and M. Kono

Session 4B2: Applications—II

Design and Implementation of a WBEM Disk Array Provider ........................................... 861
Y. Tan, H. Deng, G. Lin, and X. Zhang

Symmetry and Autobisimulation ......................................................................................... 866
J. Jiang and J. Wu

Authentication with Controlled Anonymity in P2P Systems ............................................. 871
A. Wierzbicki, A. Zwierko, and Z. Kotulski

A Kind of Negotiation Policy for Resource Allocation in Distributed
Manufacturing Environment ............................................................................................... 876
C. Lv, Y. Zhu, and C. Yin

A Model for NP-Based Application Design ....................................................................... 880
Z. Shan, R. Zhao, and K. Xie

A New Algorithm for Partner Selection in Virtual Enterprise ............................................ 884
Z. Zeng, Y. Li, S. Li, and W. Zhu

A Distributed and Cooperative Target Localization Algorithm in Wireless
Sensor Networks ................................................................................................................ 887
X. Pi and H. Yu

A New Network Management Framework Design and Application Realization .................. 890
J. Li and G. Xu

Session 4B3: Database Applications and Data Mining

Event Driven RFID Reader for Warehouse Management .................................................. 895
D. Yang and P. Zou

ARV-Based Array Grouping and Data Distribution in OpenMP/JIAJIA ................................. 900
L. Zeng, X. Yang, and C. Huang

Attribute Value Reduction in Variable Precision Rough Set ............................................. 904
F. Nian and M. Li
A Window-Based Algorithm for Skyline Queries.................................................................907
   J. Yu, X. Liu, and G. Liu

Quantitative Association Rules Mining Methods with Privacy-Preserving.........................................................910
   Z.-Y. Chen and G.-H. Liu

A Novel Text Classification Algorithm Based on Naïve Bayes and KL-Divergence ..............................................913
   B. Wang and S. Zhang

Web Document Classification Based on Extended Rough Set ..................................................................................916
   G. Yi, H. Hu, and Z. Lu

Session 4B4: Intelligent Computing and Neural Networks

Genetic Algorithms for Solving Linear Bilevel Programming...............................................................................920

A Genetic Algorithm Optimized New Structured Neural Network for Multistage
Decision-Making Problem ...............................................................................................................................925
   L. Yang, Y. Dai, B. Zhang, and Y. Gao

Intelligent Compaction Control Based on Fuzzy Neural Network ........................................................................930
   Y. Ju, G. Lin, Y. Fan, and Z. Liu

A Novel Genetic Algorithm for HP Model Protein Folding ..................................................................................935
   J. Song, J. Cheng, T. Zheng, and J. Mao

An Improved Genetic Algorithm for Multi-objective Optimization .........................................................................938
   F. Lin and G. He

A Coevolutionary Model Based on Dynamic Combination of Genetic Algorithm and Ant Colony Algorithm ................................................941
   M. Chen and Q. Lu

Session 4B5: Parallel and Distributed Algorithms—III

Digital Modulation Identification Based on Software Radio Platform ................................................................945
   J. Chen, Y. Kuo, J. Li, F. Fu, and C. Li

Parallel Algorithm for Computing Reversal Distance .........................................................................................950
   Y.-F. Shen and G.-L. Chen

Solving Very Large Traveling Salesman Problems by SOM Parallelization on Cluster Architectures .........................954
   H. Schabauer, E. Schikuta, and T. Weishäupl

Network Optimized by K-L Transform for Digital Modulation Identification ..........................................................959
   Y. Kuo, J. Chen, and X. Tan
Prediction of Chaotic Time Series Using LS-SVM with Automatic Parameter Selection ............................................................. 962
X. Wang, H. Zhang, C. Zhang, X. Cai, Jin Wang, and Jinshan Wang

**Session 4C1: Parallel and Distributed Algorithms—IV**

Scalable Parallel Quadrilateral Mesh Generation Coupled with Mesh Partitioning ................................................................. 966
J. Chen, Y. Zheng, and X. Ning

An Efficient Multi-precision Division Algorithm .................................................................................................................. 971
L. Huang, Y. Luo, H. Zhong, and H. Shen

A High-Throughput Fibre Channel Data Communication Service............................................................................................ 975
Y. Tan, J. Jin, Y. Cao, and L. Zhu

Solution to Multi-objective Fuzzy Optimization Dynamic Programming with Uncertain Information .................................... 979
Y. Jin, H. Shen, K. Li, and Z. Chi

A New Solution to Non-structural System Group Decision-Making Problems ........................................................................ 985
Y. Jin, H. Shen, K. Li, and Z. Chi

Fluid-Structure Interaction within 3-Layered Aortic Arch Model under Pulsatile Blood Flow ............................................................ 989
F. Gao, M. Watanabe, and T. Matsuzawa

**Session 4C2: Computer Mathematics**

The Calculational Method for Spectrogram and Variance-Length Curve of Yarn Based on Multiresolution Analysis.......................... 993
J. Ma and N. A. Korobov

Constructing SVK_Lattices from Cyclic Bases .................................................................................................................. 997
W. Yu, D. He, and Y. Zheng

Hamiltonian-Like Properties of k-Ary n-Cubes .................................................................................................................. 1002
D. Wang, T. An, M. Pan, K. Wang, and S. Qu

Embedding Paths of Different Lengths into Crossed Cubes ................................................................................................. 1008
J. Fan, X. Lin, and X. Jia

The Eigen-Problem in the Completely Max-Algebra ........................................................................................................ 1013
J. Ma, Y. Gao, and Z. Y. Dai

**Session 4C3: Knowledge Based Systems**

Research on Application of Development Method of Knowledge Base in the Integrated System for ICAD ............................. 1017
P. Xie, Y. Kang, and Q. Zhang
A DL-Based Approach for Product Knowledge Reasoning ................................................................. 1021
X. Fu, S. Li, and N. Channa

Towards a Knowledge-Based System of Distributed Configuration .................................................... 1024
X. Fu and S. Li

The Research on Decision Approach of Data Dependence in Dynamic Workflow System .................. 1027
S. Zhang and B. Wang

Decision Tree’s Pruning Algorithm Based on Deficient Data Sets ....................................................... 1030
Y. Zhang, Z. Chi, and D. Wang

Knowledge Discovery and Ontology-Based Services on the Grid (A Survey Report) ......................... 1033
S. K. Pandey and R. B. Mishra

Session 4C4: Image Processing and Computer Graphics—IV

Perceptually Optimized Error-Resilient H.264 Video Streaming System over the Best-Effort Internet ................................................................................................................................. 1039
N. Liao, Z.-Y. Quan, and A.-D. Men

An Automatic and Robust Algorithm for Segmentation of Three-Dimensional Medical Images ................................................................................................................................. 1044
H. Zhang, H. Shen, and H. Duan

An Image Hiding Method Based on Correlation Analysis and Image Fusion ........................................ 1049
B. Liu, Z. Li, and Y. Li

An Invariant Feature Representation for Shape Retrieval .................................................................... 1052
S. Han and S. Yang

A New Approach of the Vehicle License Plate Location ...................................................................... 1055
H. Xu, F. Yu, J. Jiao, and H. Song

Toward Blind Logo Watermarking in JPEG-Compressed Images .......................................................... 1058
Q. Gong and H. Shen

Session 4C5: Resource and Task Scheduling—II

Load Balance Heuristics for Synchronous Iterative Applications on Heterogeneous Cluster Systems ................................................................................................................................. 1063
W. Zhang, M. Hu, and H. Zhang

Security-Driven Scheduling Algorithms Based on EigenTrust in Grid .................................................. 1068
K. Li, Y. He, X. Liu, and Y. Wang

Gracefully Degrading Battery-Aware Static Multiprocessor Schedules Based on Symmetric Task Fusion .......................................................................................................................... 1073
F. E. Sandnes, O. Sinnen, and Y.-P. Huang
Using Dataflow Information to Improve Inter-workflow Instance Concurrency ................................. 1078
  Y. Wang and P. Lu

A Post-Scheduling Optimization Algorithm of Distributed Real-Time Tasks ................................. 1083
  M. Fang, Y. Yuan, and H. Liang

Author Index ........................................................................................................................................ 1087
