2011 11th International Conference
On Quality Software

QSIC 2011

Table of Contents

Message from the QSIC 2011 General Chair.................................................................................................................................viii
Message from the QSIC 2011 Programme Committee Chairs ...........................................................................................................ix
Message from WS-FMDS 2011 Programme Committee Chairs .......................................................................................................x
QSIC 2011 Committees ..............................................................................................................................................................................xi
QSIC 2011 Programme Committee ...........................................................................................................................................................xii
Additional Reviewers ....................................................................................................................................................................................xiv
Keynote Speakers .......................................................................................................................................................................................xv

Paper Session 1: Fault Localisation

Spectrum-Based Fault Localization: Testing Oracles are No Longer Mandatory ...............................................................1
Xiaoyuan Xie, W. Eric Wong, Tsong Yueh Chen, and Baowen Xu

A Dynamic Fault Localization Technique with Noise Reduction for Java Programs ..........................................................11
Jian Xu, W.K. Chan, Zhenyu Zhang, T.H. Tse, and Shanping Li

On Practical Adequate Test Suites for Integrated Test Case Prioritization and Fault Localization .............................................21
Bo Jiang, W.K. Chan, and T.H. Tse

Paper Session 2A: Testing and Defect Detection

Evolutionary Generation of Whole Test Suites ..............................................................................................................................31
Gordon Fraser and Andrea Arcuri

A Search-Based OCL Constraint Solver for Model-Based Test Data Generation ..........................................................41
Shaukat Ali, Muhammad Zohaib Iqbal, Andrea Arcuri, and Lionel Briand

Context-Sensitive Interprocedural Defect Detection Based on a Unified Symbolic Procedure Summary Model ........................................51
Yunshan Zhao, Yunzhan Gong, Li Liu, Qing Xiao, and Zhaohong Yang

Static Detection of Bugs Caused by Incorrect Exception Handling in Java Programs ..................................................61
Xiaoquan Wu, Zhongxing Xu, and Jun Wei
Paper Session 2B: Performance, Real-Time and Safety

An Automatic Performance Modeling Approach to Capacity Planning for Multi-service Web Applications .................................................................67
Xiang Huang, Wei Wang, Wenbo Zhang, Jun Wei, and Tao Huang

Model-Driven Design of Performance Requirements .........................................................76
Antonio García-Domínguez, Inmaculada Medina-Bulo, and Mariano Marcos-Bárcena

Towards Balancing Determinism, Memory Consumption and Throughput for RTSJ-Based Real-Time Applications ..................................................86
Xiaowei Zhang, Donggang Cao, Hong Mei, and Fuqing Yang

Parameterised Argument Structure for GSN Patterns ......................................................96
Yutaka Matsuno and Kenji Taguchi

Paper Session 3: Measurement

An Information Retrieval Based Approach for Measuring Service Conceptual Cohesion .........................................................................................102

The Application of a New Process Quality Measurement Model for Software Process Improvement Initiatives .................................................................112
A. Selcuk Guceglioglu and Onur Demirors

Paper Session 4A: Model Based Testing

The IntiSa Approach: Test Input Data Generation for Non-primitive Data Types by Means of SMT Solver Based Bounded Model Checking .................................................121
Stefan J. Galler, Thomas Quaritsch, Martin Weiglhofer, and Franz Wotawa

A Comparison of Test Generation Algorithms for Testing Application Interactions .........................................................................................131
Antti Nieminen, Antti Jääskeläinen, Heikki Virtanen, and Mika Katara

FSM-Based Test Derivation Strategies for Systems with Time-Outs ........................................141
M. Zhigulin, N. Yevtushenko, S. Maag, and A. Cavalli

Towards Impact Analysis of Test Goal Prioritization on the Efficient Execution of Automatically Generated Test Suites Based on State Machines ........................................150
Stephan Weißleder

Paper Session 4B: Validation, Evaluation, and Transformation

Validation of Embedded Systems Behavioral Models on a Component-Based Ericsson Nikola Tesla Demonstrator ...............................................................156
Aneta Vulgarakis, Cristina Seceleanu, Paul Pettersson, Ivan Skuliber, and Darko Huljenic

A Comparative Evaluation of Cache Strategies for Elastic Caching Platforms ........................................166
Xiulei Qin, Wenbo Zhang, Wei Wang, Jun Wei, Hua Zhong, and Tao Huang
Improving the Modifiability of the Architecture of Business Applications .................................................................176
   Xulin Zhao, Foutse Khomh, and Ying Zou

BAM: A Requirements Validation and Verification Framework for Business Process Models .................................................................186
   Sven Feja, Sören Witt, and Andreas Speck

**Paper Session 5A: Quality and Security**

Data Quality Maintenance by Integrity-Preserving Repairs that Tolerate Inconsistency ...........................................................................................................192
   Hendrik Decker

Quality Requirements Analysis Using Requirements Frames .................................................................198
   Haruhiko Kaiya and Atsushi Ohnishi

Automatic Checking of Quality Best Practices in Software Development Documents ........................................208
   Andreas Dautovic, Reinhold Plösch, and Matthias Saft

A Hierarchical Security Assessment Model for Object-Oriented Programs ..................................................218
   Bandar Alshammari, Colin Fidge, and Diane Corney

**Paper Session 5B: Workshop WS-FMDS**

Implementing Service Collaboration Based on Decentralized Mediation .........................................................228
   Xiaoqiang Qiao and Jun Wei

Program Debugging Using Constraints—Is it Feasible? ......................................................................................236
   Franz Wotawa and Mihai Nica

Saving Time in a Space-Efficient Simulation Algorithm ..................................................................................244
   J. Markovski

Formal and Model-Based Testing of Concurrent Workflows ........................................................................252
   Chen-Wei Wang, Alessandra Cavarra, and Jim Davies

**Author Index** .................................................................................................................................260
