Abstract

There is no question that well-defined, modeled and traceable requirements increases the probability of correct feature behaviour. However, not all requirements are created equal. With a look at business lifecycles and operational characteristics, I will discuss how the requirements process has been adapted to meet real-world business needs.

About the Speaker

Brian C. Miller is Vice-President, Technology at GroceryGateway.com. Brian leads Grocery Gateway's web group (architecture and design), database group and QA team. He is responsible for taking advantage of every technological advancement to maximize the ease, speed and functionality of the company's web site to keep customer's shopping experience simple, straightforward and seamless. He joined Grocery Gateway in August 2000 from Algorithmics Inc., where he was Director of Development and Product Management. In this previous position Brian oversaw the strategic direction of Algorithmics' expanding set of risk management software components. Before joining Algorithmics, Brian spent 12 years in software development at IBM Canada.
