Session 1: Multicore Platforms
Cache-Aware Compositional Analysis of Real-Time Multicore Virtualization Platforms ................................................................. 1
   Meng Xu, Linh T.X. Phan, Insup Lee, Oleg Sokolsky, Sisu Xi, Chenyang Lu, and Christopher Gill
Schedulability Analysis for a Mode Transition in Real-Time Multi-core Systems ................................................................. 11
   Jinkyu Lee and Kang G. Shin

Session 2: Systems
Predictable, Efficient System-Level Fault Tolerance in C³ ................................................................. 21
   Jiguo Song, John Wittrock, and Gabriel Parmer
GPUSync: A Framework for Real-Time GPU Management ................................................................. 33
   Glenn A. Elliott, Bryan C. Ward, and James H. Anderson
On Spin Locks in AUTOSAR: Blocking Analysis of FIFO, Unordered, and Priority-Ordered Spin Locks ................................................................. 45
   Alexander Wieder and Björn B. Brandenburg
GreenBag: Energy-Efficient Bandwidth Aggregation for Real-Time Streaming in Heterogeneous Mobile Wireless Networks ................................................................. 57
   Duc Hoang Bui, Kilho Lee, Sangeun Oh, Insik Shin, Hyojeong Shin, Honguk Woo, and Daehyun Ban
Session 3: Mixed Criticality Systems

Mixed-Criticality Scheduling upon Varying-Speed Processors ................................................................. 68
  Sanjoy Baruah and Zhishan Guo

Demand-Based Scheduling of Mixed-Criticality Sporadic Tasks on One Processor ........................................... 78
  Arvind Easwaran

Monitoring of Workload Arrival Functions for Mixed-Criticality Systems ......................................................... 88
  Moritz Neukirchner, Philip Axer, Tobias Michaels, and Rolf Ernst

Session 4: Cyber-Physical Systems, Applications

Design and Management of Satellite Power Systems .......................................................................................... 97
  Jinkyu Lee, Eugene Kim, and Kang G. Shin

  Dawei Pan, Dan Wang, Jiannong Cao, Yu Peng, and Xiyuan Peng

Session 5: Cyber-Physical Systems, Technology

Exploring Adaptive Reconfiguration to Optimize Energy Efficiency in Large-Scale Battery Systems ........................................................................................................................................................................ 118
  Liang He, Lipeng Gu, Linghe Kong, Yu Gu, Cong Liu, and Tian He

Integrated Timing Analysis of Application and Operating Systems Code .......................................................... 128
  Lee Kee Chong, Clément Ballabriga, Van-Thuan Pham, Sudipta Chattopadhyay, and Abhik Roychoudhury

RT-WiFi: Real-Time High-Speed Communication Protocol for Wireless Cyber-Physical Control Applications ................................................................................................................................................. 140
  Yi-Hung Wei, Quan Leng, Song Han, Aloysius K. Mok, Wenlong Zhang, and Masayoshi Tomizuka

The Continuous Stream Model of Computation for Real-Time Control .............................................................. 150
  Danile Fontanelli, Luigi Palopoli, and Luca Abeni

Session 6: Multiprocessor Scheduling

Multiprocessor Feasibility Analysis of Recurrent Task Systems with Specified Processor Affinities .......................................................... 160
  Sanjoy Baruah and Björn Brandenburg

Multiprocessor Real-Time Scheduling with a Few Migrating Tasks ................................................................ 170
  J. Augusto Santos Júnior, George Lima, Konstantinos Bletsas, and Shinpei Kato

Limited Pre-emptive Global Fixed Task Priority .................................................................................................. 182
  José Marinho, Vincent Nélis, Stefan M. Petters, Marko Bertogna, and Robert I. Davis
Session 7: Wireless Sensor Networks I

Self-Adapting MAC Layer for Wireless Sensor Networks ................................................................. 192
Mo Sha, Rahav Dor, Gregory Hackmann, Chenyang Lu, Tae-Suk Kim, and Taerim Park

D2: Anomaly Detection and Diagnosis in Networked Embedded Systems by Program Profiling and Symptom Mining ................................................................................................. 202
Wei Dong, Chun Chen, Jiajun Bu, Xue Liu, and Yunhao Liu

Exploitation of Physical Constraints for Reliable Social Sensing .......................................................... 212
Dong Wang, Tarek Abdelzaher, Lance Kaplan, Raghu Ganti, Shaohan Hu, and Hengchang Liu

Session 8: Real-Time Scheduling

Response Time Analysis for Fixed-Priority Tasks with Multiple Probabilistic Parameters ........................................... 224
Dorin Maxim and Liliana Cucu-Grosjean

Polynomial-Time Exact Schedulability Tests for Harmonic Real-Time Tasks ............................................. 236
Vincenzo Bonifaci, Alberto Marchetti-Spaccamela, Nicole Megow, and Andreas Wiese

Segment-Fixed Priority Scheduling for Self-Suspending Real-Time Tasks ................................................. 246
Junsung Kim, Björn Andersson, Dionisio de Niz, and Ragunathan (Raj) Rajkumar

Session 9: Wireless Sensor Networks II

System Support for Micro-Harvester Powered Mobile Sensing ............................................................. 258
Alexander Nelson, Jackson Schmadt, William Wilkins, James P. Parkerson, and Nilanjan Banerjee

Hardware Assisted Clock Synchronization for Real-Time Sensor Networks .............................................. 268
Maxim Buevich, Niranjini Rajagopal, and Anthony Rowe

Enabling Fast and Reliable Network-Wide Event-Triggered Wakeup in WSNs .......................................... 278
Xuefeng Liu, Jianrong Cao, and Shaojie Tang

Respawn: A Distributed Multi-resolution Time-Series Datastore ............................................................ 288
Maxim Buevich, Anne Wright, Randy Sargent, and Anthony Rowe

Session 10: Design and Verification

Designing Bandwidth-Efficient Stabilizing Control Servers ................................................................. 298
Amir Aminifar, Enrico Bini, Petru Eles, and Zebo Peng

Energy Efficient Task Partitioning Based on the Single Frequency Approximation Scheme .................................. 308
Santiago Pagani and Jian-Jia Chen

Static Analysis Driven Cache Performance Testing ................................................................................... 319
Abhijeet Banerjee, Sudipta Chattopadhyay, and Abhik Roychoudhury
Finitary Real-Time Calculus: Efficient Performance Analysis of Distributed Embedded Systems .......................................................... 330
   Nan Guan and Wang Yi

Session 11: Scheduling and Timing Analysis

Combinatorial Abstraction Refinement for Feasibility Analysis .......................................................... 340
   Martin Stigge and Wang Yi

Task Set Synthesis with Cost Minimization for Sporadic Real-Time Tasks .............................................. 350
   Jian-Jia Chen

Multi-level Unified Caches for Probabilistically Time Analysable Real-Time Systems .............................................. 360
   Leonidas Kosmidis, Jaume Abella, Eduardo Quiñones, and Francisco J. Cazorla

Worst Case Analysis of DRAM Latency in Multi-requestor Systems ......................................................... 372
   Zheng Pei Wu, Yogen Krish, and Rodolfo Pellizzoni

Author Index ................................................................................................................................................. 384
