- **Message from Program Committee Chairs** .............................................................................................viii
- **Program Committee**....................................................................................................................................ix
- **Additional Reviewers**...................................................................................................................................x

---

## Paper Session 1: Collective Decision Making

An Approach to Robust Resource Allocation in Large-Scale Systems
of Systems .............................................................................................................................................................1

  *Oliver Kosak, Gerrit Anders, Florian Siefert, and Wolfgang Reif*

Multi-satellite Mission Planning Using a Self-Adaptive Multi-agent System .................................................11

  *Jonathan Bonnet, Marie-Pierre Gleizes, Elsy Kaddoum, Serge Rainjonneau, and Gregory Flandin*

  *Patricio E. Petruzzi, Didac Busquets, and Jeremy Pitt*

Peer Matcher: Decentralized Partnership Formation ..........................................................................................31

  *Nicolae Vladimir Bozdog, Spyros Voulgaris, Henri Bal, and Aart Van Halteren*

---

## Paper Session 2: Machine Learning

Self-Organising Zooms for Decentralised Redundancy Management in Visual Sensor Networks ................................................41

  *Lukas Esterle, Bernhard Rinner, and Peter R. Lewis*

Active Learning for Efficient Sampling of Control Models of Collectives .....................................................51

  *Alexander Schiendorfer, Christoph Lassner, Gerrit Anders, Wolfgang Reif, and Rainer Lienhart*

Towards Data-centric Control of Sensor Networks through Bayesian Dynamic Linear Modelling ................................................61

  *Lei Fang and Simon Dobson*
Distributed Current Flow Betweenness Centrality .................................................................71
Alessandro Lulli, Laura Ricci, Emanuele Carlini, and Patrizio Dazzi

Paper Session 3: Engineering and Analysing SASO Systems
Efficient Engineering of Complex Self-Organising Systems by Self-Stabilising Fields .........................................................................................................................81
Mirko Viroli, Jacob Beal, Ferruccio Damiani, and Danilo Pianini
Multi-agent Self-Organization and Reorganization to Adapt M2M Infrastructures .................................................................................................................................91
Gauthier Picard, Camille Persson, Olivier Boissier, and Fano Ramparany
Darwin in Smart Power Grids - Evolutionary Game Theory for Analyzing Self-Organization in Demand-Side Aggregation ........................................................................101
Kristof Coninx and Tom Holvoet
Distributed Recovery for Enterprise Services ........................................................................111
Shane S. Clark, Jacob Beal, and Partha Pal

Paper Session 4: Mobile Robotics
Foraging-Inspired Self-Organisation for Terrain Exploration with Failure-Prone Agents ........................................................................................................................................121
Arles Rodríguez, Jonatan Gómez, and Ada Diaconescu
Combining Conflicting Environmental and Task Requirements in Evolutionary Robotics .........................................................................................................................131
Evert Haasdijk

Short Papers
Ashbian Homeostasis as Non-autonomous Adaptation ................................................................138
Stefano Franchi
A Mutual Influence Detection Algorithm for Systems with Local Performance Measurement ................................................................................................................144
Stefan Rudolph, Sven Tomforde, Bernhard Sick, and Jörg Hähner
Self-Organizational Reciprocal Agents for Conflict Avoidance in Allocation Problems ...................................................................................................................150
Yuki Miyashita, Masashi Hayano, and Toshiharu Sugawara
Value-Sensitive Design of Self-Organisation ........................................................................156
Virginia Dignum and Frank Dignum
Posters

Social Amoeba Dictyostelium Discoideum as an Inspiration for Swarm Robotics ................................................................. 162
Mohammad Parhizkar and Giovanna Di Marzo Serugendo

Creating Complex Applications via Self-Adapting Autonomous Agents in an Intelligent System Framework ................................................................. 164
Tammy R. Fuller and Gerald E. Deane

Self-Directed Weight Management by Feedback from a Self-Adaptive Metabolic Health Monitoring System ................................................................. 166
Zsolt Ori and Ilona Ori

Cyber-Physical-Social System Self-Organization: Ontology-Based Multi-level Approach and Case Study ................................................................. 168
Alexander Smirnov, Alexey Kashevnik, and Nikolay Shilov

Hierarchical Service Oriented Architecture for Development of Autonomic Systems ................................................................. 170
Malik Jahan Khan

Sustainable Safety in Mobile Multi-robot Systems via Collective Adaptation ................................................................. 172
Darko Bozhinoski, Ivano Malavolta, Antonio Bucchiarone, and Anna Paola Marconi

Towards a Spatial Language for Run-Time Assessments in Self-Organizing Systems ................................................................. 174
Francesco Luca De Angelis and Giovanna Di Marzo Serugendo

Demonstration

Towards Self-Adaptation on Real-World Hardware: A Preliminary Lightweight Programming Framework ................................................................. 176
Hiroki Tsuda, Hiroyuki Nakagawa, and Tatsuhiro Tsuchiya

Author Index ......................................................................................................................................................................... 178
