Table of Contents

First IEEE International Workshop on
Source Code Analysis and Manipulation

Message from the Program Co-Chairs ................................................................. vii
Conference Organizers ........................................................................................ viii
Program Committee .............................................................................................. ix

A Case Study in Detecting Software Security Vulnerabilities Using Constraint
Optimization ........................................................................................................... 3
  M. Weber, V. Shah, and C. Ren

A Hybrid Program Slicing Framework ................................................................. 14
  J. Rilling and B. Karanth

An Object Level Transformation Technique to Improve the Performance of
Embedded Applications ......................................................................................... 26
  S. Bartolini and C. Prete

A Source-to-Source Compiler for Generating Dependable Software ................... 35
  M. Rebaudengo, M. Sonza Reorda, M. Violante, and M. Torchiano

Analysis and Manipulation of Distributed Multi-Language Software Code .......... 45
  L. Deruelle, M. Melab, M. Bouneffa, and H. Basson

Application Maintenance Using Software Agents ............................................... 57
  A. Sharma and M. Capretz

Detecting Dead Statements for Concurrent Programs .......................................... 67
  Z. Chen, B. Xu, and H. Yang

Finding Code on the World Wide Web: A Preliminary Investigation ................... 75
  J. Bieman and V. Murdock

Flow Insensitive Points-To Sets .......................................................................... 81
  P. Anderson, D. Binkley, G. Rosay, and T. Teitelbaum

Identifying Clones in the Linux Kernel ............................................................... 92

Jmangler A Framework for Load-Time Transformation of Java Class Files ........ 100
  G. Kniesel, P. Costanza, and M. Austermann

Library Transformations ....................................................................................... 111
  S. Schupp, D. Gregor, D. Musser, and S-M. Liu

Measurement and Analysis of Runtime Profiling Data for Java Programs .......... 124
  J. Horgan, J. Power, and J. Waldron
Preserving the Documentary Structure of Source Code in Language-Based
Transformation Tools ............................................................................................ 133
  M. Van De Vanter

Program Slicing: Methods and Applications ....................................................... 144
  A. De Lucia

Restructuring Web Applications via Transformation Rules .............................. 152
  F. Ricca, P. Tonella, and I. Baxter

Smell the Coffee Uncovering Java Analysis Issues ............................................. 163
  C. Knight

Software Engineering by Source Transformation Experience with TXL .......... 170
  J. Cordy, T. Dean, A. Malton, and K. Schneider

Static Slicing and Parametric Polymorphism ..................................................... 181
  D. Byers and M. Kamkar

The Formal Transformation Approach to Source Code Analysis and Manipulation .......... 187
  M. Ward

Type Infeasible Call Chains .............................................................................. 196
  A. Souter and L. Pollock

Using Automated Source Code Analysis for Software Evolution .................. 206
  L. Burd and S. Rank

Using Data Flow Analysis to Infer Type Information in Java Bytecode .......... 213
  P. Maggi and R. Sisto

Author Index ........................................................................................................ 225
