The 22nd International Conference of the Chilean Computer Science Society (SCCC 2002) was held November 6-8, 2002, in Copiapó, Chile. This event was organized locally by Universidad de Atacama, with the support of P. Universidad Católica de Chile, in Santiago.

Authors from 13 countries in America—both North and South—Europe, and Asia submitted articles. An international program committee selected 28 articles from among the 54 contributions that were received. Selected articles are representative of different areas of computer science, including algorithms, software engineering, artificial intelligence, databases, programming, networks, etc.

The Chilean Computer Science Society seeks to promote and facilitate the interchange of knowledge and experience among academics and professionals who work in the general area of computing. This conference is one of the oldest and most important computer science conferences in Latin America, and it has one of the highest-quality technical levels among them. It started more than 20 years ago, and it helps to bring work done in Latin America to the attention of computer scientists from around the world. It also helps to keep Latin American scientists and computer professionals up to date with major advances in the field.

I would like to thank the organizing committee, the program committee, and the other reviewers, for their hard work and dedication. Also, I would like to acknowledge the support of our institutions, and the collaboration of the governmental and industrial sponsors.

Alvaro E. Campos
Santiago, Chile
